

NORWYN KHAN

SKILLS

Programming & Frameworks

JavaScript · TypeScript · React.js ·
Next.js · Nest.js · Redux · Node.js ·
Express.js · HTML5 · CSS3 · Tailwind

Databases & Storage

MongoDB · PostgreSQL · MySQL ·
Redis · Elasticsearch

Cloud & DevOps

AWS · EC2 · S3 · RDS · Lambda · GCP ·
Azure · Docker · Kubernetes · Jenkins ·
GitHub Actions · Terraform

System Design & Architecture

Microservices · Event-driven Systems ·
CQRS · API Lifecycle Management

Testing & Quality Tools

Jest · Cypress · Mocha · Chai ·
Selenium · Postman · Playwright

Project Management Tools

GitHub · Jira · Trello · Asana · Slack ·
Team

PROJECTS

Signit

Signit is a platform for secure e-signatures and digital document management, ensuring legal compliance, faster workflows, and easier collaboration.

<https://signit.sa/en/>

Burton

Burton Tax Services offers expert personal tax preparation, ensuring accurate filings, optimized returns, and full compliance. Our trusted advisors deliver tailored guidance that minimizes errors, maximizes deductions, and provides a stress-free tax season.

Senior Full Stack Engineer

@ connect.norwyn@gmail.com · github.com/merge-base · Virginia, US

SUMMARY

Full Stack specialist with 7+ years of experience delivering production web platforms and distributed systems. Skilled in building interactive React/Next.js interfaces, scalable Node.js APIs, and optimized MongoDB backends. Strong focus on real-time features, CI/CD pipelines, and cloud-native deployments. Experienced in observability, security, and system cost efficiency. Proven ability to roll out solutions supporting millions of requests while guiding teams toward engineering maturity.

EXPERIENCE

Senior Full Stack Engineer

12/2023 - Present

NavHealth

- Built React and Next.js web modules with real-time updates, used by 9k+ users, enabling collaboration features across dashboards.
- Developed scalable backend services with Node.js, leveraging Express.js, RESTful APIs, and asynchronous event-driven architecture.
- Designed and optimized MongoDB schemas with indexing strategies, reducing query latency by 35% for high-traffic applications.
- Automated scaling with Kubernetes and AWS autoscaling, lowering monthly hosting expenses by 18%.
- Implemented access control using Keycloak, securing all multi-tenant application endpoints.
- Coordinated release cycles across 3 teams, delivering new features consistently within planned iterations.

Full Stack Engineer

03/2020 - 11/2023

XeoMatrix

- Developed custom React/Next chart components for analytics, handling datasets with 100K+ entries without noticeable lag.
- Deployed Node.js background workers with RabbitMQ for order processing, supporting 10k+ daily asynchronous events.
- Created automated test suites with Jest and Cypress, improving coverage from 35% to 82% and catching regressions early.
- Set up monitoring dashboards with Prometheus/Grafana, alerting teams before 80% of outages impacted end users.
- Partnered with DevOps to migrate legacy services into Dockerized environments, cutting release prep time by 60%.

Software Engineer

07/2018 - 02/2020

Rivian

- Built customer-facing React modules for loyalty programs, increasing digital engagement sign-ups by 14%.
- Implemented rate-limiting and throttling in Node.js APIs to protect services from traffic spikes during seasonal campaigns.
- Designed MongoDB aggregation pipelines for reporting tools, replacing manual Excel processes across departments.
- Wrote integration scripts syncing product data between internal systems and third-party APIs with 99% sync accuracy.
- Documented architectural diagrams and service flows, reducing onboarding time for new engineers by two weeks.

EDUCATION

Bachelor's in Computer Science

STRENGTHS

Effective Communication · Problem Solving · Teamwork · Leadership · Adaptability
