Professional Summary:

Results-driven Business Analyst with 9+ years of experience leading the deployment of web-based client-server applications, optimizing business processes, and delivering system solutions from concept to implementation. Adept at translating complex client requirements into actionable technical solutions that align with business objectives.

- Extensive expertise in Software Development Life Cycle (SDLC) with proficiency in Agile (Scrum, Kanban) and Waterfall methodologies.
- Skilled in conducting Joint Requirement Planning (JRP) and Joint Application Development (JAD) sessions, fostering collaboration between business stakeholders and IT teams.
- Strong background in requirements elicitation, documentation, and deployment, ensuring seamless integration of business needs into technical solutions.
- Proficient in test planning, User Acceptance Testing (UAT), and end-to-end validation, ensuring software quality through regression, system, and integration testing.
- Hands-on experience with business process modeling using Lucid chart, Visio, Mural, and Miro, creating use case diagrams, workflow diagrams, and process flow charts for clear business visualization.
- Developed and maintained a Requirements Traceability Matrix (RTM) to ensure all business requirements were accurately mapped to functional and technical specifications.
- Expertise in SQL for data analysis and reporting, leveraging MS Access, Excel (VLOOKUP, Pivot Tables), and Tableau to develop insightful dashboards that drive business decisions.
- Strong knowledge of Unified Modeling Language (UML), capable of creating Use Case, Activity, and Sequence Diagrams using MS Visio, Visual Paradigm, and other modeling tools.
- Experienced in configuration and change management, ensuring smooth transitions and minimal business disruption.
- Excellent interpersonal and communication skills, adept at cross-functional collaboration and delivering presentations to diverse audiences.
- Passionate about continuous improvement, problem-solving, and driving efficiency through data-driven insights and technology-driven solutions.

Technical Skills:

- **SDLC Methodologies:** Agile (Scrum, Kanban, FDD & SAFe), Waterfall.
- **Business Modeling Tools:** Microsoft Visio, Rational Rose, Miro, Lucid Chart.
- **Requirement Management Tools:** JIRA, JAMA Connect, Azure DevOps, Confluence (Atlassian), Microsoft OneNote, SharePoint.
- **Defect Tracking Tools:** Micro Focus ALM, JIRA (Atlassian) Azure DevOps.
- **Databases:** Oracle Database, Microsoft SQL Server,

- **Business Applications:** Microsoft 365, Salesforce, Workday, Tableau, Smartsheet.
- **Additional Technical Skills:** Power BI for advanced data visualization, Git for version , Business Intelligence (BI) toolscontrol

Certification:

- Certified SAFe Scrum Master
- Certified SAFe 5 Product Owner/Product Manager
- Certified Salesforce Administrator

Professional Experience:

US Bank, Minneapolis, MN

Product Owner / Business System Analyst | Feb 2024 – Jan 2025

Project: The objective of the project is to transition all data aggregation systems from Hadoop to Oracle for enhanced efficiency and scalability. Additionally, the project aims to integrate a new System of Record (SOR) to identify and consolidate fraud-related data for Direct Deposit accounts.

Key Responsibilities & Contributions:

Project 1: Migration of Fraud Aggregation Systems

- Led the migration of fraud aggregation data from Hadoop to Oracle, ensuring minimal disruption to fraud detection and reporting.
- Conducted impact analysis and risk assessments, defining business rules and transformation logic to maintain fraud detection efficiency.
- Collaborated with DBAs, developers, and business users to ensure accurate data migration and seamless system transitions.
- Spearheaded user acceptance testing (UAT) and coordinated stakeholder signoffs to validate system performance post-migration.
- Collaborated with stakeholders and development teams to validate requirements traceability from initiation to deployment.

Project 2: Onboarding of a New System of Record (SOR) for Direct Deposit Fraud Detection

- Led requirement gathering sessions with fraud risk analysts and technology teams to onboard a new SOR for Direct Deposit fraud detection.
- Defined data integration and mapping requirements, ensuring accurate aggregation of fraud-related activities.
- Partnered with Actimize teams to enhance fraud detection capabilities by optimizing data ingestion and transformation.
- Utilized Agile methodologies (Scrum, Kanban) with 2-week sprint cycles, leveraging JIRA for backlog management and Confluence for documentation.
- Created and tracked detailed user stories to align development with business requirements.
- Facilitated roadmap discussions and stakeholder presentations, ensuring transparent communication on project milestones.
- Developed Tableau dashboards and SQL-based reports to provide real-time visibility into project action items and fraud trends.

- Conducted weekly status meetings, preparing executive updates using MS Project and PowerPoint for leadership review.
- Drove cross-functional collaboration with business leaders and end-users to ensure seamless adoption of new fraud detection solutions.

Valley Bank, New Jersey

Business System Analyst | March 2023 – November 2023

Project: Led the migration of core banking products—including Loans, Demand Deposit Accounts (DDA), and Mortgages—from a legacy system to the new IBS platform, ensuring seamless transition, regulatory compliance, and data integrity.

Key Responsibilities & Contributions:

- Conducted requirement gathering sessions with business stakeholders to assess the migration impact on core banking products.
- Analyzed legacy system processes and defined business requirements for migrating functionalities to the new platform.
- Collaborated with product owners, technology teams, and data architects to ensure seamless data migration, system integration, and functionality alignment.
- Defined data mapping, transformation rules, and validation strategies to ensure accurate migration of customer records, transactions, and account information.
- Ensured regulatory and compliance adherence, aligning system functionalities with banking regulations, risk management policies, and reporting standards.
- Developed process flow diagrams, functional specifications, and use cases to support development and testing teams.
- Facilitated User Acceptance Testing (UAT) sessions, coordinated defect resolution, and ensured successful system rollout.
- Monitored post-migration performance, tracked key issues, and collaborated with cross-functional teams to enhance system functionality and user experience.
- Served as the Primary Point-of-Contact between business teams, vendors, and technology teams, ensuring smooth communication and issue resolution.
- Captured, tracked, and maintained action items using Smartsheet, providing real-time reporting on project progress.
- Worked closely with team leads to validate content on Statements and Notices, ensuring accuracy and compliance.
- Conducted training sessions, workshops, and hands-on demos to equip end-users with proficiency in the new system.
- Assisted the Project Manager (PM) in status reporting, tracking testing progress, and ensuring vendor deadlines were met.
- Developed and documented Test Plans, Test Scripts, Test Cases, and Test Data using Azure DevOps for Unit, Integration, and Functional Testing.
- Created executive dashboards, scorecards, and reports in Tableau, providing visibility into project status and key business metrics.
- Validated data and backer disclosures on statements and notices, ensuring compliance with banking standards.

Ulta Beauty, Chicago, IL

Product / Business System Analyst | Nov 2022 – Mar 2023

Project: The project scope involves developing services to support a new Point of Sale (POS) initiative, enabling web orders to be placed and shipped directly from the cash register for out-of-stock items. This includes performing real-time inventory checks, order placement, and migrating the Store-to-Door (S2D) fulfillment channel from ATG to DSOTF for improved order processing and fulfillment efficiency.

Key Responsibilities & Contributions:

- Gathered and documented business requirements for new service integrations to enhance POS functionality and inventory management.
- Partnered with cross-functional teams (Product, Engineering, Inventory Management, and Retail Operations) to define workflows for real-time inventory checks, order placement, and fulfillment operations.
- Analyzed existing fulfillment processes, identifying gaps and inefficiencies, and recommended system enhancements for improved operational efficiency.
- Defined API integration requirements to ensure seamless data exchange between POS, inventory, and fulfillment platforms.
- Worked closely with UX/UI teams to refine checkout flows, enhancing the customer experience at the cash register.
- Led the enhancement of Omni-channel Point of Commerce (POC) and POS systems, integrating Oracle Order Management System (OMS) for Order Capture, Processing, Fulfillment, and Payment Processing.
- Developed process flow diagrams, functional specifications, and test cases to support system development and testing.
- Conducted impact assessments on order processing workflows to ensure accurate tracking, invoicing, and shipping operations.
- Configured and tested Warehouse Management System (WMS) functionalities, collaborating with Manhattan Associates WMOS to optimize fulfillment processes. Facilitated User Acceptance Testing (UAT), managing defect tracking, resolution, and stakeholder approvals.
- Validated API endpoints using Swagger, ensuring seamless integration between platforms.
- Performed SQL-based data validation, ensuring data integrity for product details, seasonal inventory, and order transactions.
- Maintained project documentation in Confluence, tracking project scope, requirements, and ongoing updates.
- Collaborated with Senior Management on status reporting, program strategy, and risk management planning.
- Worked closely with Scrum teams, ensuring smooth coordination across multiple teams and aligning project deliverables with business goals.

Wells Fargo, San Leandro, CA

Business Execution Consultant (Product Analyst) | Dec 2020 – Oct 2022

Project: Led the redesign of the Make an Appointment web application, enabling seamless in-person and phone-based appointment scheduling for Wells Fargo customers, improving operational efficiency and customer engagement.

Key Responsibilities & Contributions:

- Gathered and analyzed business requirements from stakeholders across customer service, branch operations, and IT to ensure seamless integration with customer records and Salesforce (SFDC).
- Collaborated with business and functional leads to optimize the appointment scheduling process for improved efficiency and customer experience.
- Designed and documented Business Requirements Documents (BRD), Use Case diagrams, and Activity diagrams using MS Visio.
- Worked extensively with JIRA to create Epics, Features, and User Stories while tracking progress in an Agile environment.
- Developed end-to-end business process flows, identifying key system dependencies to enhance real-time scheduling and reduce appointment conflicts.
- Partnered with technical teams to integrate real-time branch availability updates and automated customer notifications.
- Improved customer experience by streamlining appointment booking workflows, reducing waiting times, and increasing scheduling efficiency.
- Documented business process flows and system integration requirements to align with industry best practices and regulatory compliance.
- Designed and implemented RESTful APIs and integration flows using MuleSoft to connect front-end booking applications with backend banking systems.
- Optimized system dependencies by leveraging MuleSoft connectors for Salesforce and database services, reducing data inconsistencies and enhancing efficiency.
- Facilitated User Acceptance Testing (UAT) sessions, coordinated defect resolution, and ensured successful system rollout.
- Utilized advanced Tableau functionality (parameters, actions, tooltip modifications, API, etc.) to create interactive analytical dashboards.
- Developed SQL-based reports to assess the impact of new investment features on customer engagement and portfolio performance.
- Participated in quarterly planning with Product Owners to define scope and roadmap commitments.
- Reviewed test plans, test cases, and test scripts to ensure full requirements-to-testing traceability.
- Worked in a cross-scrum team environment, collaborating across multiple teams for
- Attended user story demos for acceptance and contributed to retrospective meetings to enhance Agile practices.

Deloitte, Albany, NY

Enterprise Business Analyst| Sept 2019 – Jun 2020

Project: Migration of Deloitte Taxation software (DTI) to Intel, focusing on Document Management.

Key Responsibilities & Contributions:

- Drove seamless migration of document management systems by gathering business requirements from Tax Practitioners and Engagement Team members to ensure a smooth transition from legacy applications.
- Led requirement analysis by translating soft business needs into high-level features, enabling the Technical Product Owner and Delivery Business Analyst to drive development efficiently.
- Enabled Agile execution by shadowing and assisting Product Owners in estimating efforts, prioritizing user stories, and managing backlogs and release plans.
- Optimized business workflows by designing AS-IS and TO-BE process flow diagrams, integrated models, and swim lane diagrams to ensure end-to-end clarity in business operations.
- Conducted GAP analysis to identify inefficiencies in the legacy system and proposed enhancements for a more robust document management framework.
- Enhanced data accessibility and decision-making by creating and optimizing SQL views and stored procedures to extract meaningful insights from large datasets.
- Improved user experience and interface design by collaborating closely with the UX team to develop high-fidelity mocks that aligned with business requirements.
- Provided high-level technical estimates by working closely with the Technical Architect, ensuring accurate scope and resource planning.
- Streamlined Agile project management by utilizing Microsoft Azure DevOps to create and track Epics, Features, and User Stories.
- Facilitated requirement alignment and stakeholder engagement by leading Joint Application Development (JAD) sessions with management and internal users.
- Enabled efficient sprint planning and execution by converting product backlog items into sprint backlogs and ensuring seamless integration into the Agile development lifecycle.
- Drove successful program delivery by actively participating in Program Increment (PI) feature demonstrations, ensuring alignment with business goals before release.

Essex Property Management, CA

Business Analyst

Project: HR System Optimization – Workday & ICIMS

Key Responsibilities & Contributions:

- Identified business pain points and automation opportunities by mapping out the current HR system processes (Workday & ICIMS), driving efficiency improvements.
- Optimized Workday Compensation processes by configuring salary, bonus, allowance, commission, and merit plans, ensuring seamless merit and bonus plan processing.
- Enhanced HR reporting and analytics by building Custom, Advanced, and Matrix Reports, and developing Worklets for landing pages using Workday's Report Writer tool.
- Facilitated smooth data migration by assisting in converting legacy HR data into Workday and ensuring accurate third-party system integrations.
- Streamlined HR operations by configuring HCM business processes, including merit cycles, goal setting, and performance reviews.
- Led stakeholder collaboration by working closely with HR teams, IT, and Product Leads to gather, analyze, and validate business requirements.

- Improved process efficiency by designing AS-IS and TO-BE business process flow diagrams and conducting a GAP analysis to identify necessary system upgrades.
- Enhanced Workday system performance by troubleshooting configuration and reporting issues, ensuring optimal system functionality.
- Developed and executed HR system test plans by creating QA documentation, test cases, and validating system enhancements before deployment.
- Enabled smooth SharePoint Online migration by identifying and resolving data migration challenges from on-premises systems.
- Drove continuous user support and adoption by developing support models, FAQs, and knowledge bases in collaboration with IT and HR teams.

JC Penney, Plano, TX

Product/Business System Analyst | Aug 2018- Sep 2019

Project: J.C. Penney Website Enhancement & Sterling OMS Implementation

Key Responsibilities & Contributions:

- Enhanced e-commerce experience by improving the Product Listings and Gallery pages, optimizing inventory pricing, orders, and catalog integration for seamless backend processing.
- Led key UX enhancements by collaborating with the Product Owner and User Experience teams to refine filters, visual images, and product display on the website.
- Optimized order management workflows by integrating Sterling Order Management (OMS) with ERP, WMS, and e-commerce platforms, ensuring efficient order processing, inventory tracking, and returns handling.
- Enabled real-time inventory visibility by working with cross-functional teams to implement Distributed Order Management (DOM) and omnichannel fulfillment strategies.
- Improved business decision-making by integrating SQL queries with Tableau dashboards, enabling real-time monitoring of retail website performance.
- Refined Sterling OMS configuration by assisting in system customization to align with business needs and industry best practices.
- Validated system functionality through UAT and API testing, ensuring seamless data flow between sales channels, warehouses, and suppliers.
- Optimized website performance & customer satisfaction by analyzing CSAT data via Adobe Analytics and Quantum Metrics, identifying pain points, and working with engineering to resolve them.
- Drove Agile execution by leading grooming sessions, sprint planning, and cross-team collaboration, ensuring smooth requirement handoffs and dependency resolution.
- Enhanced quality assurance by organizing Bug Triage meetings, prioritizing fixes, and coordinating between Development and QA teams.
- Boosted testing efficiency by partnering with A/B test teams to experiment with different strategies before implementation, ensuring optimal customer engagement.
- Improved process clarity by creating flow charts, use cases, UML models, wireframes, and mockups using Microsoft Visio and Requisite Pro.

Crocs Retail Inc, Longmont, CO

Business Analyst| Nov 2016- Jul 2018

Projects: E-Commerce Web Portal Development | Workday Payroll & Time Tracking Implementation

Key Responsibilities & Contributions:

- Enhanced digital sales capabilities by collaborating with E-Commerce stakeholders to streamline Crocs' selling processes across web, mobile, and retail channels.
- Optimized order fulfillment by implementing key Order Management System (OMS) enhancements, ensuring real-time inventory visibility and omnichannel sales integration.
- Improved online customer experience by defining business and functional requirements for a new web portal, leading to increased operational efficiency.
- Strengthened user experience (UX) by partnering with UI/UX teams to design an intuitive, brand-consistent platform for Crocs.com.
- Integrated OMS with ERP & warehouse systems, enabling seamless order tracking, return processing, and fulfillment updates.
- Validated API integrations to ensure smooth data exchange between the e-commerce platform and backend systems.
- Led Agile execution by conducting daily stand-ups, sprint planning, and backlog grooming, ensuring timely feature delivery.
- Led UAT (User Acceptance Testing) and regression testing to ensure a bug-free and smooth customer shopping experience.

Project 2: Workday Payroll & Time Tracking Implementation

- Gathered and analyzed business requirements for Workday Payroll and Time Tracking implementation, ensuring alignment with HR and Finance policies.
- Configured Workday Payroll processes, including pay groups, earnings, deductions, payroll calendars, tax setups, and integrations with third-party providers.
- Implemented Workday Time Tracking, defining work schedules, time entry validations, and compliance rules for accurate payroll processing.
- Collaborated with cross-functional teams (HR, Payroll, IT) to streamline payroll workflows and enhance employee self-service functionalities.
- Developed and tested custom Workday reports, including Payroll Summary, Pay Slips, and Time Tracking reports for accurate financial reporting.
- Integrated Workday Payroll with third-party tax, benefits, and banking systems, ensuring accurate tax calculations and compliance with labor laws.
- Conducted payroll data conversion and validation, ensuring accuracy and completeness of legacy data migration into Workday.
- Performed end-to-end testing, UAT, and payroll parallel runs to validate system accuracy before go-live.
- Provided post-implementation support by troubleshooting payroll and time-tracking issues, identifying root causes, and implementing solutions.
- Trained HR and Payroll teams on Workday Payroll functionalities, reporting, and self-service capabilities to enhance user adoption.

Citigroup Inc, Stamford, CT

Business System Analyst | Apr 2015- Oct 2016

Projects: Oracle Financials Implementation | SWIFT Payments Integration

**Key Responsibilities & Contributions:**

- Enhanced international transaction processing by leading the SWIFT payments integration into the core banking system, improving global payment accuracy and speed.
- Streamlined treasury and finance operations by gathering and documenting business requirements from treasury, compliance, and IT teams, enabling smoother Oracle Financials implementation.
- Assisted in the configuration of Oracle Financials modules, including General Ledger (GL), Accounts Payable (AP), Accounts Receivable (AR), Fixed Assets (FA), and Cash Management (CM).
- Conducted gap analysis between existing financial processes and Oracle Financials capabilities, identifying areas for improvement and automation.
- Facilitated integration between Oracle Financials and other enterprise systems, such as Treasury Management Systems (TMS), SWIFT payments, and third-party banking applications.
- Optimized payment workflows by analyzing existing treasury processes, identifying inefficiencies, and conducting gap analysis to align systems with regulatory and SWIFT standards.
- Accelerated project execution by coordinating across IT, vendors, and business teams, ensuring timely configuration, integration, and testing of the new Treasury Management System (TMS).
- Enhanced Agile execution by facilitating Scrum planning meetings, defining sprint backlogs, and collaborating across Product Owners, Development, and QA teams for faster delivery.
- Led end-to-end testing and validation, ensuring seamless data accuracy for SWIFT payments and compliance with international banking regulations.
- Developed Tableau dashboards with real-time financial insights, helping stakeholders monitor transaction trends, credit & collections, and invoice disputes.
- Strengthened regulatory compliance and security by managing requirement traceability matrices, information security requirements, and non-functional business rules for digital banking transactions.
- Improved payment automation by developing and customizing batch and real-time client interfaces for Money Transfer, ACH, and Credit Card Processing.
- Championed user adoption and training, conducting walkthroughs, UAT coordination, and post-implementation support to ensure smooth system transitions.

Education:

- Bachelor of Arts 2002 – University of Mumbai
