

Summary

Results-driven Software Engineer with 4+ years specializing in front-end engineering and full-stack development using JavaScript (ES6+), React.js, HTML5, CSS3, and Java/Spring Boot. Proven expertise building scalable authentication systems, RESTful APIs, and responsive web applications serving 15M+ daily users. Strong background in Agile methodologies, cross-browser compatibility, performance optimization, and collaborating with product teams on requirement gathering and user acceptance testing. Seeking to leverage technical proficiency and security implementation experience for Bank of America's Authentication Hub team.

Education

Master of Science: Computer science

Jun 2025

University of Central Missouri

Lee's Summit, MO

Course Work: Advance Algorithms, Operating Systems, Compiler Design, Database Systems, Testing, Machine Learning, Java, C#.

Technical Skills

- **Front-End:** JavaScript (ES6+), HTML5, CSS3, React.js, Redux, Angular, Ajax, jQuery
- **Responsive Design:** Mobile-first design, Cross-browser compatibility, Progressive Web Apps (PWA)
- **Server-Side Technologies:** Java, Spring Boot, Spring MVC, Node.js, Express.js, RESTful APIs
- **Databases & Performance:** PostgreSQL, MongoDB, MySQL, Query optimization, Database indexing
- **Cloud & Infrastructure:** AWS (ECS, CloudWatch, S3), Docker, Kubernetes, Microservices architecture
- **Testing & Quality Assurance:** Jest, Enzyme, JUnit, Mockito, Selenium, Browser testing, Performance testing
- **DevOps & Collaboration:** CI/CD (GitHub Actions, Jenkins), Git, Agile/Scrum, Code reviews, Source control
- **Security & Authentication:** OAuth2, JWT, Role-based access control (RBAC), GDPR, SOC2 compliance

Experience

Software Engineer

Jan 2022 – Dec 2023

Ascendion

Hyderabad, India

- Architected microservices using Spring Boot and Node.js with Docker containerization on AWS ECS, achieving 50% scalability improvement and 20% infrastructure cost reduction.
- Collaborated with product managers and UX designers during requirement gathering sessions, translating business specifications into technical implementations for 4 major product releases.
- Integrated OAuth2 and JWT authentication into RESTful APIs with role-based access controls, ensuring GDPR and SOC2 compliance for enterprise security standards.
- Tuned PostgreSQL and MongoDB databases with sharding and indexing strategies, processing 15M daily transactions while maintaining sub-50ms query response times consistently.
- Configured AWS CloudWatch and ELK stack monitoring solutions with automated alerting, cutting production incident resolution time by 40% through real-time diagnostics.
- Conducted code reviews and mentored 5 junior engineers on unit testing practices using JUnit and Mockito, raising code coverage to 85% and lowering defect rates.

Software Engineer

Jan 2020 – Dec 2021

DXC Technology

Hyderabad, India

- Constructed responsive client-facing dashboards using React and Redux with lazy loading and tree shaking, reducing initial bundle size and decreasing page load times by 25%.
- Ensured cross-browser compatibility across Chrome, Firefox, Safari, and Edge by implementing progressive enhancement techniques and conducting thorough browser testing for web applications.
- Optimized Express.js RESTful endpoints with PostgreSQL indexing strategies, processing 1M+ database records with average response times under 100ms for production workloads.
- Authored comprehensive test suites using Jest and Enzyme frameworks, elevating code coverage from 60% to 85% and minimizing post-release regression issues substantially.
- Standardized Docker and Docker Compose containerization for microservices, accelerating developer onboarding by 30% and maintaining environment consistency across development/staging/production stages.
- Automated CI/CD workflows with GitHub Actions for build, test, and deployment phases, increasing release frequency by 60% while eliminating manual deployment errors.
- Participated in Agile sprint planning and daily standups with cross-functional teams, facilitating backlog refinement and boosting team velocity by 15% through collaborative efforts.

Projects

Job Application Tracker

Tech: React.js, Node.js, Express.js, PostgreSQL, Docker, AWS

- Delivered Kanban-style job tracking interface with React.js drag-and-drop functionality, improving task management workflow and visibility by 45% based on user feedback.
- Established secure Node.js backend with Express.js routing and PostgreSQL schemas, handling complex data filtering and sorting operations for application tracking features.
