in <https://www.linkedin.com/in/premnath-packirisamy-65b8ba136>

- With over 18 years of extensive expertise in leading complex enterprise architecture migrations and platform modernization.
- Experience with governance processes and control frameworks.
- Expertise in setting up the AWS cloud infrastructure for projects involves hybrid cloud support.
- AWS Certified Solutions Architect - Professional with hands on experience of more than 8+ years in AWS services including writing cloud formation templates, API Gateway with Lambda & Lambda triggers, API Gateway, S3, EBS, IAM, KMS,VPC,MS Kafka, DynamoDB, Code Build from GIT, Cloud Watch,EC2, ECR, EKS, SQS, Docker and good knowledge in services like, Subnet, NAT,Route Table, Route 53, Security Groups, Target Group, NLB/ALB, AWS FARGATE serverless, AWS Kinesis, AWS Cognito, AWS Glue,Kinesis, AWS WAF, Elastic search 5.2 with AWS by using jest client query pattern.
- Expertise in Event driven architecture using Spring Microservices, hands on knowledge in Play frame work , aka architecture using Domain Driven Design principles using technologies like Java 8 and Java 11,Java 17, Spring Boot, Spring Reactive
- Programming, Spring Cloud, Spring Vault, Spring Integration, Service Registry, Apache Kafka, Schema Registry, Apache Avro Schema, Lombok, Map struct , GIT,Jenkins, Junit, Spring Rest, Spring MVC, Spring Data JPA, SOAP, Apache Tomcat
- Server, OAuth2.API to database connection management using different connection techniques - Relational Databases like Mysql,PostgreSQL, and NoSQL databases DynamoDB, Elastic search.
- Having good experience in how to handle End-To-End ML projects from the scratch. And libs like Python pandas,Matplotlib, NumPy, SciPy, Scikit-Learn, Keras, TensorFlow.
- Has been a part of CoE team and devised primers on AWS services inorder for the application teams to follow.
- Ability to provide technical leadership and hands on day-to-day solutions to agile teams, preparing the design artifacts and implementation of solutions.
- Handled multiple projects at same time with globally distributed AGILE teams.
- Involved in PI plannings to set goal for the growth and successful delivery of the project.
- Performed Chaos Engineering with the help of tools like Gremlin and performed monitoring and analysis of data with the help of Datadog, Splunk as major supporting tools.
- Manage relationships with cross application teams and prioritizes multiple projects as they go from design into production.
- Provided strong leadership to enhance team productivity and morale.

2023-11 - 2025-05

Vice President - AWS Cloud Security Architect

JP Morgan Chase, Plano

- Architect and lead the modernization of a critical financial platform to a multi-region AWS solution, ensuring high availability,compliance, and security for financial transactions.
- Designed and implemented secure, scalable AWS architecture using services such as MSK, Lambda, Glue, S3, CloudWatch,KMS, VPC, Transit Gateway, and IAM to enable real-time event streaming and analytics.
- Collaborated with cybersecurity and infrastructure teams to implement best-in-class security controls and monitoring across hybrid and cloud environments.
- Developed Infrastructure as Code (IaC) using Terraform to provision and manage AWS resources, increasing deployment consistency and reducing lead time.
- Migrated application from Java11 to java 21.
- Led container platform design using Amazon EKS and ECS to run microservices in a secure and scalable manner with integration into CI/CD pipelines.
- Acted as technical lead across cross-functional teams, translating cyber analytics requirements into robust AWS-based data lake architectures.
- Worked in close coordination with global stakeholders and security operations to support threat detection and response capabilities.

- Enabled secure and observable operations by integrating Datadog, Splunk, and AWS CloudWatch for log aggregation, metrics, and alerting.
- Ensured readiness for urgent incident response scenarios, participating in after-hours and weekend production support for critical security events.
- Mentored engineers and established architectural best practices around serverless design, stream processing, and cloud security.

2022-03 - 2023-02

Sr. AWS Architect

Capgemini America Inc

- Lead the team in successful migration and modernization of Enterprise architecture right from feasibility analysis till successful launch into production.
- Implemented various microservice design pattern with Java.
- Involved in end-to-end design and development IC role with Java & AWS public cloud.
- Implement AWS enterprise design for migration project in large scale finance domain by using CDC.
- Developed proof of concepts and primers using IaaS, PaaS, and SaaS, FaaS using AWS cloud products .
- Mentored 11 plus members in the team to get them comfortable with the AWS environment.
- Tech stack involves spring boot, IAM,KMS,kinesis, Lambda, Dynamodb, Aurora RDS postgres,ECS, DB2, Attunity...
- Having sound knowledge in the AWS cloud, I involved in cost optimization for the project which includes multiple accounts.
- Implemented Supervised, unsupervised, semi supervised, Reinforcement algorithms to understand the patterns.
- Being an individual contributor, i worked on strategizing devops pattern for production launch, which involves blue green deployments as well.
- Involved in setting up the roadmap for successful production launch by enabling chaos engineering and monitoring tools across hybrid cloud environment.
- Advocate for Cloud 1st methodology, devised architecture for various products by leveraging cloud native services wherever applicable.
- Collaboration with teams across the projects to build complete cloud offerings including network, security and operations.
- Worked both independently and with all levels of the organization, including technical and non-technical team members.

2018-04 - 2019-02

AWS Cloud Architect

Innova Solutions Pvt Ltd

- Involved in AWS/Java project scratch development activities.
- Having continuous interaction with PO's for incremental delivery.
- API Design and Development for Insurance Domain to perform the transactions.
- Development includes technology stacks like cloud formation templates, Lambda, API Gateway, S3, EBS, IAM, VPC, DynamoDB, MySQL serverless, Lambda triggers, Cloud Watch,EC2, Glue ETL, ECR, EKS, SQS, Docker, Java 8, Spring Boot, Jenkins, Apache Kafka, Junit, Git, Apache Maven, SONAR, IntelliJ IDEA/Eclipse.
- Involved in production activities like setting up AWS infrastructure for all the environment for AWS/Spring boot application.
- Setting up jobs for CI/CD process using Jenkins and deploys in private cloud env.
- Owned and executed end to end multiple Data Science projects.
- Involved in solution Designing (including Application design, Infrastructure design, Team structure) to meet the requirements.
- Working in Agile platform with Scrum and involved in all the scrum ceremonies.
- Mentored 18 plus members in the team to get them comfortable with the AWS environment.

2014-09 - 2018-04

Java/AWS Cloud Lead

UST Global Solutions Pvt Ltd

- Involved in various domains like Healthcare, Finance/Insurance, Energy.
- Development of Play Framework Microservices Applications from the scratch.
- Involved in team handling, architect in AWS environment with play framework Java and acting scrum master.
 - Setup the Play Framework Java and guide team to implement.
 - Fetching the result from AWS elastic search query using Jest Client.
 - Implemented CRUD operation by using Play java rest service to AWS DynamoDB.

- By using AWS console, to create and enhanced AWS DynamoDB triggers in Node.js code.
- That triggers will help to auto create/update/delete the index data, when record is coming to AWS DynamoDB.
- By using Play Java code to implement Kinesis stream.
- Engaged in Development by using Play Framework Java, AWS elastic search, AWS DynamoDB, AWS Kinesis, Python, PySpark,AWS Lambda, Node.js.
- This project refers to the prediction of orders, which could be generated in one office location such that it maintains necessary levels of inventory on hand without holding excess stock and also avoid stock out. Build with Python, Pandas, NumPy, ANN.
- Get the data from Datacenter by using IOT gateway and push it to Redshift then the data segregate with various Data source like DynamoDB, Kinesis, Elastic Search 5.2
- Involved in transferring the data from Data center by using IOT.

2013-05 - 2014-07

Senior Java Developer

Atos Syntel

2012-10 - 2013-04

Senior Software Engineer

STG-Systems Technology Group Pvt Ltd

2011-03 - 2012-05

Senior Software Engineer

DUN & BRADSTREET INTERNATIONAL

2007-09 - 2011-02

Senior Software Engineer

HeadERP Solutions Pvt Ltd

EDUC

2004-09 - 2007-06

Computer Application, Master in Computer Application

Anna University, Trichy

2001-06 - 2004-04

Computer Application, Bachelor in Computer Application

Bharathidasan University, Trichy

HILT

AWS Lambda, AWS DynamoDB, AWS ECS, AWS EC2, AWS IAM, AWS SQS, AWS S3

★★★★★

AWS EKS, Network Load Balancer, Application Load Balancer, Cognito, AWS Glue, Kinesis, AWS WAF, Elastic search 5.2

★★★★★

Java 8 & 11, Python 3.7

★★★★★

Spring boot, Spring MVC, Play Framework Java(Akka),Hibernate, Structs

★★★★★

Apache Kafka, MSK, Cassandra DB

★★★★★

Data Science Algorithms Supervised, Un Supervised, Semi Supervised, Reinforcement, Online/Batch learning, Model/Instance based

★★★★★

Data Structures like Arrays, HashTable, Linked List, Stacks, Queues, Trees, BFS, DFS, Recursion, Sorting

★★★★★

Pandas, Matplotlib, NumPy, SciPy, Scikit-Learn, Keras, TensorFlow

★★★★★

Jenkins, Bamboo,Docker,Terraform, AWS CFT, BitBucket, Github

★★★★★

DataDog, Dynatrace, Splunk, AWS Cloud Watch

★★★★★

Incidents management, Teamwork and Collaboration, Organization and Time Management, Problem-Solving

★★★★★

2018-04	AWS Certified Solutions Architect Associate
2023-11	AWS Certified Solutions Architect Professional
2025-01	PMI-PMP
