

Sabitha Manukonda

Atlanta, GA | 470-631-9114 | sabithamanukonda10@gmail.com | [Linkedin](#)

PROFESSIONAL SUMMARY:

- Business Analyst with over 8 years of experience in all phases of the Software Development Life Cycle (SDLC), gathering requirements, system analysis, and implementation of IT solutions across various business domains, including financial systems and enterprise applications.
- Adept at analyzing business needs, optimizing processes, and translating them into scalable technological solutions to enhance operational efficiency and regulatory adherence.
- Led cross-functional Agile teams in sprint planning, backlog grooming, and daily stand-ups to ensure project alignment with business goals.
- Collaborated with Product Owners and stakeholders to define clear requirements and prioritize user stories.
- Facilitated Scrum ceremonies, including sprint reviews and retrospectives, to drive continuous process improvements.
- Managed sprint velocity and tracked key Agile metrics to enhance team productivity and predictability.
- Worked closely with development, QA, and business teams to ensure seamless execution of deliverables within time and budget constraints.
- Utilized tools like Jira, Confluence, and Trello to track project progress, task assignments, and sprint planning.
- Skilled in identifying gaps, mapping business requirements, and recommending system improvements that align with strategic goals.
- Strong communicator with proven ability to collaborate with stakeholders, optimize workflows, document business requirements, and drive cross-functional teams.
- Functional experience with concentration on Use Case modeling using UML, Business Process Modeling, Data Modeling, Change Management, Order Management, Technical Training, and Software Development, ensuring data is actionable for reporting and analysis.
- Working knowledge in the ETL (Extract, Transform, Load) of data into a data warehouse, ensuring efficient data flows for reporting, and utilizing Business Intelligence (BI) tools like Business Objects Modules (Reporter, Supervisor, Designer, Web Intelligence) for generating strategic insights.
- Extensive experience working with SQL query language to develop complex queries and stored procedures for data extraction, transformation, and loading, improving data quality and governance across the organization.
- Hands-on experience with Rational Unified Process (RUP), Agile, and V-Model methodologies, ensuring structured project execution and iterative CRM enhancements.
- Strong experience in B2B, B2C, and Ecommerce portal web application development and CRM, integrating business intelligence solutions into digital platforms for improved client reporting and customer satisfaction.
- Involved in Project documentation (Project Charter, BRD, FSD), Visio diagrams, PowerPoint presentations, and spreadsheets, maintaining Requirement Traceability Matrices (RTM), test plans, and test case scenarios stored in MS SharePoint for efficient project tracking.
- Experienced in developing project plans using MS Project and MS SharePoint, validating requirements, and reengineering processes, ensuring data quality and ensuring alignment with business intelligence objectives.
- Created BRDs and detailed FRs, Data Mapping documents, ensuring accurate representation of business processes in technical specifications for seamless reporting.
- Created and maintained work breakdown structure (WBS) and project schedules using Microsoft Project, managing deliverables, allocating resources, and identifying critical paths for BI solution delivery.
- Collaborated with Project Manager to prioritize use cases and requirements for iterative release strategy, ensuring BI reporting solutions are aligned with business objectives and data governance best practices.
- Experienced in conducting GAP analysis, User Acceptance Testing (UAT), SWOT analysis, Cost-benefit analysis, and ROI analysis, ensuring actionable insights for data-driven decision-making and optimizing BI reporting.
- In-depth understanding of the AS-IS and TO-BE business processes, converting these requirements into technical specifications for preparing test plans, validating data flows, and ensuring data quality across all reporting solutions.

EDUCATION:

Indian Institute of Technology (IIT), Chennai

Bachelor of Technology — 2017

TECHNICAL SKILLS:

Development Methodologies: RUP, AGILE, Waterfall, Scrum, ESDM, STV

Automation Tool: MS Visio, Rational Rose, Rational ClearCase, Rational RequisitePro, Documentum

Utility Tools: MS Office Suite, MS Project, TOAD, TSO, Adobe Photoshop

BPM tools: ServiceNow, Confluence, PEGA, Camunda, Nintex, monday.com

Reporting Tools: Crystal Reports, SQL Server Reports (SSRS)

Data warehousing Tools: Informatica, Business Objects, Cognos, Erwin

IT Service Management & Operations Tools: ServiceNow, Jira

Testing Tools: Quick Test Pro (QTP), TestDirector, WinRunner, LoadRunner

Specialties: BusinessProcess Integration, Integrated Competency Centre, ArisModelling.

PROFESSIONAL EXPERIENCE

Trinity Software Solutions, Georgia

Oct 2024 - Present

Business Analyst

Description:

As a Business Analyst, I led requirements gathering, documentation (BRD, FRD, SRS), and cost estimation to drive data-driven decision-making. I managed backlog prioritization, user story creation, and integrated PowerBI with Azure DevOps for seamless reporting and data integration. Collaborating cross-functionally, I optimized data pipelines, enhanced BI solutions, and refined cloud architecture. I ensured the accuracy of SFDC/Zendesk reports, streamlined workflows, and delivered actionable insights to leadership, ultimately improving operational efficiency and supporting better decision-making.

Responsibilities:

- Develop comprehensive Business Requirements Documents (BRDs), Functional Requirements Documents (FRDs), and Software Requirement Specifications (SRS) for multiple projects, ensuring alignment with stakeholder needs and business objectives
- Conduct workflow analysis, system discovery, and process mapping to identify inefficiencies, streamline operations, and implement technology-driven improvements
- Facilitated Agile Scrum ceremonies, including sprint planning, daily stand-ups, and retrospectives, ensuring seamless collaboration between cross-functional teams and reducing project cycle time.
- Managed and prioritized the product backlog by gathering business requirements, defining user stories, and working closely with stakeholders to align deliverables with business objectives
- Utilize various techniques such as activity diagrams, scenarios, flowcharts, document analysis, interviews, and workflow analysis to interpret and document user needs, facilitating clear communication between stakeholders and development teams.
- Gather information from multiple sources, critically evaluated data, reconciled conflicts, and distinguished user requests from true needs, ensuring accurate and actionable requirements.
- Collaborate proactively with technology teams, program staff, and senior leadership to ensure system designs met user needs and business goals.
- Develop cost estimation processes for quoting new business, aligning them with data-driven decision-making strategies adopted across the division.
- Define and document functional requirements, translating them into user stories and requirements to fuel the development lifecycle for Business Intelligence (BI) solutions.
- Manage and prioritize product backlogs, assisting teams in breaking down work into manageable pieces to ensure incremental development and timely delivery.
- Create customer acceptance criteria based on business requirements, data schemas, reporting designs, and mockups, ensuring solutions met customer needs.
- Integrate PowerBI reports with Azure DevOps by creating links, ensuring efficient data integration within the development workflow.

- Demonstrate leadership by managing diverse responsibilities while actively participating in hands-on task execution, prioritizing BI solution delivery.
- Possess a strong understanding of data modeling, warehouse design, and familiarity with fact/dimension concepts to ensure accurate reporting solutions.
- Deploy comprehensive data pipelines within enterprise-level data platforms, optimizing data flows for better reporting and analytics.
- Maintain SQL data dictionaries to ensure data elements were up to date, improving data governance and reporting accuracy.
- Assign tasks and hours to staff according to project needs, ensuring resource optimization and timely BI solution delivery.
- Gather requirements for PowerBI reports, ensuring solutions met business and customer needs.
- Work with Salesforce (SFDC) and Zendesk reports, resolving assigned tickets and ensuring data was accurately represented in reports.
- Oversaw the testing process, including reviewing test cases, validating quality processes, and executing tests to ensure data accuracy and BI system integrity.
- Collaborate with cross-functional global teams, managing stakeholder expectations, prioritizing business requirements, and driving agile development cycles through JIRA for seamless project execution.
- Actively collaborate with development and architecture teams to optimize cloud-based data warehouse architecture, improving data access and reporting performance.
- Deliver ad-hoc reports requested by business leadership, ensuring data insights were available for timely decision-making.
- Work independently, deploying effective project management techniques to ensure project success.
- Communicate effectively both verbally and in writing, ensuring clear and concise information sharing among stakeholders.
- Apply technology effectively to tasks, demonstrating attention to detail and strong problem-solving skills.

Thomson Reuters, India
Business Analyst

Oct 2022 to Apr 2024

Description: As a Business Analyst, I led the implementation and optimization of Dynamics 365 Sales, Marketing, and Customer Service modules to enhance client relationship management and sales pipeline efficiency. I collaborated with cross-functional teams to customize workflows, automate processes, and develop executive dashboards using Tableau and Power BI. My role involved conducting feasibility studies, gap analyses, and ensuring solutions aligned with business goals and customer expectations for improved operational efficiency and customer satisfaction.

Responsibilities:

- Led the implementation and optimization of Dynamics 365 Sales, Marketing, and Customer Service modules to improve client relationship management, lead tracking, and customer retention.
- Configured and customized Dynamics 365 to streamline sales pipeline management, automated workflows, and data reporting for improved decision-making.
- Conducted feasibility studies and documented technical requirements to enhance Dynamics 365 CRM capabilities aligned with business needs.
- Developed executive dashboards using Tableau and Power BI to visualize sales performance, customer insights, and marketing campaign effectiveness.
- Provided user training and support for Dynamics 365 functionalities, ensuring adoption across sales and customer service teams.
- Conducted feasibility studies and developed technical requirement documentation for new SaaS products, enhancing the development lifecycle efficiency.
- Conducted User Story Workshops and trained Team Members on how to effectively write User Stories
- Conducted user interviews, gathered requirements, analyzed the requirements and managed change requirements by implementing Organization Change Management (OCM) Methodology.
- Proactively identified any risk/dependencies in time for the assigned project activities before their likely occurrence. Highlighted emerging issues as the audit life cycle progresses and provided ad-hoc advice and guidance for the best approach.
- Conducted gap analysis and implemented process improvements to enhance lead conversion and customer engagement.
- Collaborated with cross-functional teams to share feedback from clients and contribute to continuous improvements in the World-Check platform, ensuring it meets client needs.
- Facilitated stakeholder engagement sessions to ensure clear business objectives and technology alignment.
- Organized weekly team meetings and participated in regular business calls to discuss project progress and

challenges

- Managed backlog by creating a prioritized list, product backlog, and assists the team in breaking down the pieces into smaller, more manageable pieces and build it incrementally.
- Designed customizations and configurations of SFDC objects, page layouts, workflows, document templates, data fields, reports and dashboards according to the business need.
- Translated As-Is Business & Finance reports and created custom SFDC Reports and Dashboards for end-user's home page to reflect their timely activities and profile/role/job requirements.
- Worked with Product Owners to manage and prioritize user stories in product backlog
- Conducted project kick-off meetings, defined project objectives and scope, tracked risks, assumptions and status of the project using JIRA.
- Used JIRA and Agility to track team progress and delivery performance.
- Organized JAD sessions to flush out requirements, performed Use Case and workflow analysis, outlined business rules, and developed domain object models.
- Responsible for business process analysis that includes requirements facilitation, definition & analysis, alternatives, software selection, prototyping, business process design and mapping.
- Maintained a Traceability Matrix to ensure that all functional requirements are addressed at the use case level as well as the test case level.
- Involved in identifying use cases, actors and writing use case narratives. Created use case diagrams and activity diagrams using MS Visio.
- Created and maintained dashboards for C-level executives and quality KPIs, leveraging Tableau and Power BI.

Extramarks, India Business Analyst

Sep 2019 to Sep 2022

Description: I managed and validated master data across multiple projects, leading business requirement gathering for software development initiatives. I developed data integration strategies using Salesforce CRM and Tableau, enhancing reporting accuracy. I drove product roadmap planning, feature development, and cross-functional collaboration to support successful product launches. Additionally, I designed automated workflows and reporting tools, improving data quality, business logic automation, and executive decision-making

Responsibilities:

- Managed and validated master data for 4 major projects, improving data accuracy and operational efficiency.
- Led business requirement gathering for 5 major software development projects, ensuring stakeholder alignment.
- Worked on technical/functional requirements using peer interviews, document analysis, requirements workshops, site visits, business process descriptions, use cases, scenarios, business analysis, task and workflow analysis & documentation.
- Conducted detailed market research to support the launch of 3 new product features across customer platforms.
- Developed and implemented data integration strategies using Salesforce CRM and Tableau to enhance client reporting accuracy.
- Created interactive Tableau dashboards that improved decision-making for executives by 35%.
- Spearheaded roadmap planning, feature development, and user engagement strategies for major product launches.
- Managed cross-functional teams across product development, marketing, and sales to ensure successful go-to-market strategies.
- Defined and documented data governance policies, improving data quality and consistency.
- Led the development of an advanced analytics dashboard, increasing decision-making speed by 25%.
- Worked closely with the testing team at times of testing in UAT and PROD by validating data in salesforce based on request.
- Designed and deployed workflows, validation rules, Approval Processes and Auto-Response Rules for automating business logic with Sales and marketing cloud on salesforce.com.
- Created various Reports and Dashboards to assist managers to better utilize Salesforce cloud as a Sales Cloud, Marketing Cloud and Service Cloud, etc.
- Assisted with user testing of systems (UAT), developing and maintaining quality procedures, and ensuring that appropriate documentation is in place.
- Designed and implemented ETL data pipelines and data marts in Azure Cloud, improving reporting efficiency.
- Developed data models (conceptual, logical, and physical) for business intelligence (BI) applications.
- Performed impact and risk analysis to ensure data integrity and security.
- Created automated data validation and cleansing scripts to improve accuracy and consistency.
- Developed in-house applications using APIs to integrate external and internal data sources.

- Managed end-to-end project lifecycles, ensuring 100% adherence to deadlines

Extramarks, India

Dec 2018 to Aug 2019

Data Analyst

Responsibilities:

- Gathered technical and system business requirements, worked with end users to understand, and document current state processes to analyze operations, determined project scope and kept stakeholders focused on in-scope items only, maintained Business Requirements document.
- Supported key commercial operations with ad-hoc reporting, improving decision-making for 4 product lines.
- Designed and implemented a standardized data reporting framework, improving reporting consistency across the department.
- Developed and automated weekly reports for executives, reducing manual reporting time by 40%.
- Spearheaded the rollout of a new customer management system, reducing service response times by 25%.
- Conducted in-depth data analysis to validate feasibility of new dashboard features, increasing user engagement by 15%.
- Studied system capabilities, analyzed alternative solutions and prepared system specifications.
- Involved in developing project plans using MS Project and MS SharePoint, identifying documents, validating requirements, and reengineering processes.
- Performed detailed analysis of business and technical requirements and designed the solution by customizing SFDC in an Agile environment.
- Presented the tickets inflow and progress of each ticket using JIRA, Confluence, graphs and charts and continuously groomed backlogs to fit the customer requirements.
- Facilitated training for large groups and one-on-one sessions both in person and via Web-Ex.
- Performed Data Analysis and Data validation by writing complex SQL queries using SQL against the SQL server database
- Provided technical support/assistance during the whole implementation process.
- Ensured that quality service was provided to internal and external customers by establishing and enforcing organizational/operational standards.

Toppr, India

July 2017 to Nov 2018

Account Executive

Responsibilities:

- Conducted in-depth market research and sales data analysis, improving lead qualification accuracy by 20%.
- Recommended process improvements that increase customer conversion rates by 15%.
- Conducted performance analysis on large datasets, identifying trends and insights to support strategic decision-making.
- Involved in documenting solution designs and technical requirements during the development and implementation of JIRA Workflows.
- Worked with product owner to constantly clean the JIRA tickets, product backlog and major impediments across the project lifecycle.
- Executed data profiling to identify inconsistencies, ensuring high-quality data for decision-making.
