

Lead Python / Java // GCP Developer / Data Engineer

Name: Sai Reddy Kuntla

Contact: +1 470 666 4345

Email: saireddy.kuntla@gmail.com

Available Immediately for Interviews

Summary:

Accomplished Software Engineer with over 8+ years of experience in the complete Software Development Lifecycle (SDLC), including requirements analysis, design, development, testing, debugging, and maintenance. Demonstrated expertise in building and implementing enterprise and web applications using a broad range of Python and Java technologies, with a strong focus on object-oriented programming and scalable solution design.

- **Python development experience**, including hands-on work with **PySpark, Pandas, Boto3, AWS SDK libraries, and PyTest** for data-driven applications and automation.
- Strong **SQL development skills**, having worked with complex queries and stored procedures across databases like **Oracle, PostgreSQL, MySQL, and Redshift**.
- Expertise in **Microservices** and **RESTful service implementation** using **Spring Boot, Jersey, Spring Web Services**, and **Spring JDBC**.
- Hands-on experience with **Google Cloud Platform (GCP)** services such as **Cloud Run, Cloud Scheduler, Cloud Functions, BigQuery, Pub/Sub, Buckets**, etc.
- Proficient with **AWS Cloud Services** including **Lambda, S3, Step Functions, Glue, EC2, ECS, CloudFormation, RDS, CloudWatch**, and REST APIs.
- Automated deployment pipelines using **Terraform, Google Cloud Deployment Manager**, and **GCP Cloud Build/GitHub Actions**, improving deployment efficiency by 30%.
- Experience building and deploying containerized applications using **Docker** and managing infrastructure using **Terraform**.
- Adept in **CI/CD tools** such as **Jenkins, Maven, Gradle**, and source control with **Git**.
- Strong exposure to **Shell scripting, AWS CLI executions**, and automation of build/test/deploy tasks
- Proficient in **data engineering** using **PySpark** and ETL processes with **Glue** and **BigQuery**.
- Created end-to-end monitoring, alerting, and recovery using **CloudWatch**, GCP alerts, and notifications for failed jobs and system health.
- Worked with Python packages like **NumPy, Pandas, Flask**, and libraries for data cleaning, validation, visualization, and model performance testing.
- Skilled in writing **unit and integration tests** using **JUnit, Mockito**, and **PyTest** for both Java and Python applications.
- Strong hands-on with **Core Java concepts** like **Multithreading, Collections, and Arrays**, used extensively in backend development.
- Experienced with **IDEs** including **IntelliJ, Eclipse, PyCharm, and Visual Studio**.
- Comfortable working in **Agile/Scrum environments** using **JIRA** for issue tracking, user story creation, and **Confluence** for documentation.
- Strong experience handling teams, task assignment, code reviews, and mentoring developers.
- Proven ability in **technical documentation**, migration of on-prem workloads to GCP, and implementing scalable, cloud-native solutions.

Professional Experience:

COMPANY: TATA CONSULTANCY SERVICES

CLIENT: AUTOZONE INC

Mar 2025 -Till now

Lead Python Developer

- Led as **Onsite Coordinator and Technical Lead** for AutoZone's cloud migration program, overseeing end-to-end delivery, stakeholder coordination, and offshore collaboration.
- **Migrated 45+ applications** from on-premises to **Google Cloud Platform (GCP)** with zero downtime, ensuring compliance, stability, and optimized performance.
- Directed a team to develop **scalable Python and cloud-native solutions** for enterprise data processing, automation, and reporting across GCP and AWS environments.
- **Designed and deployed RESTful APIs** using **Flask** and **Spring Boot**, containerized with Docker, and hosted on Cloud Run and Amazon ECS for high scalability.
- Built automated **data pipelines** with **Confluent Kafka**, **Cloud Scheduler**, **AWS Step Functions**, and **BigQuery**, integrating alerting via CloudWatch and GCP Operations Suite for proactive monitoring.
- Utilized **PySpark**, **Pandas**, and **Boto3** for large-scale data transformations and AWS service integrations; implemented IaC using **Terraform** and **CloudFormation**.
- Performed code **reviews**, **testing** (PyTest, Java frameworks), and **production deployments**, ensuring reliability, technical excellence, and seamless post-go-live support.

Environment: Python, PySpark, Pandas, NumPy, Flask, Boto3, GCP (Cloud Run, Scheduler, Functions, BigQuery, Pub/Sub), AWS (Lambda, S3, Step Functions, Glue, EC2, RDS, CloudWatch), Spring Boot, REST API, Docker, Kafka, Terraform, Jenkins, GitHub, JIRA, Confluence, SQL, Oracle, Redshift, IntelliJ, PyCharm, Eclipse.

COMPANY: TATA CONSULTANCY SERVICES

CLIENT: THE HOME DEPOT

July 2021 - Feb 2025

Lead Python Developer

- Led a team of developers to deliver scalable Python and cloud-native solutions for enterprise data processing and reporting.
- Designed and implemented a service to extract files from Workday buckets, compare them, and update **BigQuery** tables accordingly.
- Developed scheduled jobs using **Cloud Scheduler** and **Step Functions** to automate data ingestion and transformation.
- Integrated alerting mechanisms to monitor job failures via **GCP** and **CloudWatch**, ensuring fast recovery and SLA adherence.
- and deployed APIs using **Flask** and **Spring Boot**, containerized with **Docker**, and hosted on **Cloud Run** and **ECS**.
- Utilized **PySpark** and **Pandas** for heavy data transformations, and **Boto3** for seamless AWS service integrations.
- Performed unit testing using **PyTest** and Java testing frameworks, ensuring code reliability and test coverage.
- Used **Terraform** and **CloudFormation** to manage infrastructure as code across GCP and AWS.
- Participated in full project lifecycle: requirement gathering, design, development, testing, deployment, and support.
- Worked closely with clients, attended daily stand-ups, provided status updates, and addressed production issues proactively.
- Owned deployment processes, monitored production jobs, and ensured zero-downtime releases.

- Managed Jira boards for sprint planning, story breakdown, and defect tracking; maintained project documentation in **Confluence**.

Environment: Python, PySpark, Pandas, NumPy, Flask, Boto3, GCP (Cloud Run, Scheduler, Functions, BigQuery, Pub/Sub), AWS (Lambda, S3, Step Functions, Glue, EC2, RDS, CloudWatch), Spring Boot, REST API, Docker, Terraform, Jenkins, GitHub, JIRA, Confluence, SQL, Oracle, Redshift, IntelliJ, PyCharm, Eclipse.

COMPANY: HCL Technologies Limited, India

CLIENT: Citi Bank

July 2020 – July 2021

Senior software Engineer

- Developed high-quality, scalable application software for cross-asset risk system platforms.
- Participated in Agile development processes, adhering to best practices for development, integration, and deployment.
- Conducted code reviews and promoted adherence to design and coding standards.
- Worked closely with product teams on requirement analysis and build specifications.
- Involved in the analysis, design, development, and testing phases of Software.
- Contributed to architectural standards and technical evolution of frameworks and APIs.
- Mentored and supported team members. • Developed high-quality, scalable application software for cross-asset risk system platforms.
- Participated in Agile development processes, adhering to best practices for development, integration, and deployment.
- I am responsible for reviewing and assign the tasks to the resources in the team and actively collaborating with team to resolve the issues.
- Experience in handling the team.

Environment: Java 1.7, J2EE, Spring boot 1.5, REST Template, Spring JDBC template, Spring Cloud, REST, SOAP UI, Mockito, Junit, PostgreSQL, GIT, MAVEN, terraform Log4J 1.2, MS Office, SQL Studio, AWS.

COMPANY: HCL Technologies Limited, India

CLIENT: United Services Automobile Association (USAA)

November 2016 – July 2020

Senior software Engineer

- Organizations often store Personal Information (SSN ID, Bank Account number etc.) of their end customers and employees for business and/or official purpose. This information is called PII (Personally Identifiable Information) and must be secured and always protected due to regulatory requirements. Most of these organizations do not have visibility to which application, database, server is involved in storing and processing the PII.
- Scanning *PCI (Account/Credit card Numbers) & *PII (SSN, NAME, ADDRESS, Phone #, Bank Account number etc.) from various document formats like pdf, pdf as image, msg, xlsx, xml, bin, pptx, doc with image, pdf, tiff, txt and generating reports.
- Working on business, and persistence tier using Core Java (Multithreading, Collections, exceptions, concurrent collections etc.), spring boot framework.
- I am responsible to check random files whether my service is providing expected information.

- Implemented features using Spring Boot framework and used MySQL as a database.
- Developed and maintained components using spring boot in micro services environment.
- Implemented asynchronous restful micro services using spring boot.
- Worked with Concurrent Collections, Multi-threading.
- Involved in bug fixing with JIRA stories which were assigned to me in given SLA.
- Been part of this innovative team and Received a MADJAM award for selecting in one of top 3 innovative ideas in all over HCL.

Environment: Java 1.8, J2EE, Spring boot 1.5, REST Template, Spring JDBC template, Spring Cloud, REST, SOAP UI, Mockito, Junit, PostgreSQL, GIT, MAVEN, terraform Log4J 1.2, MS Office, SQL Studio.

Education:

- Bachelor of Technology in Computer Science and Engineering (CSE) Jawaharlal Nehru Technological University India, 2014.
