

Sravan Reddy

North Carolina, US

+1-(520)-491-9134 | sravankr798@gmail.com | <https://www.linkedin.com/in/sravan-k-ab673a170/>

Professional Summary

Passionate Senior Software Engineer with 6+ years designing and deploying scalable, high-performance applications across diverse industries. Proven expertise in developing microservices and responsive front-end solutions with modern frameworks while ensuring security and reliability. Adept at transforming complex challenges into user-friendly, cloud-native systems with strong collaboration and leadership skills. Eager to pivot expertise to a Java and Golang environment to deliver end-to-end, innovative solutions.

Core Competencies

- **Technical Leadership & Innovation:** Cloud-Native Architecture, AI Integration, Microservices Design, Team Mentoring, Agile Collaboration, Agile Methodologies
- **Backend & APIs:** C#, .NET 8/.NET Core, ASP.NET Core Web API, Entity Framework Core, Microservices, Blazor Server/WASM, Java, Golang
- **AI & Modern Solutions:** Azure OpenAI (GPT-4), Semantic Kernel for .NET, RAG Architecture, Vector Databases, Prompt Engineering
- **Frontend Development:** React 18, Angular 17, TypeScript, JavaScript ES6+, Responsive Design, SignalR Real-time Updates
- **Cloud & DevOps:** Azure (App Services, Functions, DevOps), AWS (ECS, Lambda, S3), Docker, Kubernetes, CI/CD Automation
- **Data & Integration:** SQL Server, PostgreSQL, Redis, Apache Kafka, RESTful APIs, GraphQL, Performance Optimization, Databases
- **Quality & Security:** Automated Testing, Security Best Practices, OAuth 2.0, Application Monitoring, Code Reviews

Professional Experience

Client: GHX Healthcare

Senior Software Engineer, .NET

Jun 2023 - Present

Colorado, United States

Built technology that puts patient care first.

- Architected AI-powered patient record summarization using Azure OpenAI GPT-4, enabling clinicians to reduce review time by 35% and focus more on direct patient care across 15+ healthcare facilities.
- Engineered a scalable backend with 8 microservices built in .NET 8 (leveraging principles from Java and Golang development) to support 50,000+ concurrent healthcare professionals with 99.95% uptime, underscoring reliability in healthcare.
- Developed a responsive patient dashboard using React 18 and SignalR, increasing user engagement by 45% and reducing support tickets by 60% by presenting complex medical data in an accessible format.
- Implemented a comprehensive CI/CD pipeline with automated testing, reducing manual release efforts by 95% and allowing the team to focus on innovation over deployment complexity.
- Deployed containerized applications with auto-scaling on Kubernetes, achieving \$50K+ in annual cost savings while ensuring optimal performance during critical peak periods.
- Established an observability stack with Application Insights, reducing problem resolution time by 60% to maintain the system reliability that healthcare professionals depend on.

Client: Commerce Bank

Full Stack Software Engineer, .NET

Apr 2021 - May 2023

Kansas, Missouri

Transformed a monolithic ASP.NET MVC application into .NET Core 6 microservices on AWS, improving performance by 65% while upholding the stringent security standards expected in the banking sector.

- Developed a secure Angular 13 client portal with real-time financial visualizations, serving 15,000+ active users and prioritizing an intuitive user experience.
- Implemented a multi-region deployment strategy using AWS ECS, achieving 99.98% availability during peak trading periods while processing over \$2M in daily transactions.
- Created serverless Lambda functions for transaction processing, eliminating manual errors and saving more than 20 hours weekly to allow the team to concentrate on customer-centric features.
- Integrated RabbitMQ for asynchronous messaging with ACID compliance, ensuring system stability during 10x traffic spikes and preserving data integrity.
- Mentored 3 junior developers in .NET Core best practices and cloud-native patterns, emphasizing the 'why' behind architectural decisions and fostering agile collaboration.

Client: Toyota Motors

Software Developer, .NET

May 2019 - Mar 2021

Plano, Texas

Developed N-Tier supply chain applications using ASP.NET MVC and C#, supporting 500+ users across 12 manufacturing facilities and streamlining daily operations.

- Engineered WCF and Web API integrations with logistics providers, reducing data synchronization errors by 75% and enhancing supply chain transparency.
- Created dynamic front-end components using React.js and AngularJS, decreasing page load times by 50% and enhancing user satisfaction by 40% through efficient design.

- Optimized database queries with Entity Framework and strategic indexing, achieving 35% faster data retrieval for critical reporting needs.
- Contributed to Agile/Scrum implementation, leading to a 25% improvement in sprint delivery while reinforcing iterative development and effective team collaboration.

Education

NAU

Master's, Computer Science

Arizona, United States

- **GPA:** 3.8

Key Projects

AI-Powered Healthcare Analytics Platform

Personal Project

- Built full-stack application using .NET 8, Blazor, and Azure OpenAI for intelligent medical data analysis
- Implemented RAG architecture with vector embeddings, exploring how AI can make medical information more accessible

Microservices E-Commerce Platform

Open Source Contribution

- Contributed to distributed e-commerce platform using .NET Core microservices and event-driven architecture
- Implemented CQRS pattern with Apache Kafka, learning valuable lessons about building scalable, consistent systems

Certifications

- Microsoft Azure Developer Associate (AZ-204)
- Microsoft Azure Solutions Architect Expert (AZ-305)
