

Travis Ryan Dalton

Senior Full-Stack Engineer

linkedin.com/in/travis-dalton-827678354/

SUMMARY

Senior Full Stack Engineer with over 10 years of experience delivering full stack solutions across **healthcare, finance, and AI-driven** platforms. Expertise in building scalable, high-performance applications using **Java, Go, Node.js** and **React**. Proficient in developing **microservices** and serverless architectures on **AWS**, leveraging **machine learning (ML)** and **generative AI** models to create data-driven insights and automate complex workflows. Proven leadership in guiding cross-functional teams, mentoring developers, and driving end-to-end project success in **Agile** environments.

PROFESSIONAL EXPERIENCE

The AutoZoom

Feb 2022 – Dec 2024 | Remote, Texas

Team leader

Led the development of AutoZoom's advanced web-based scoring and predictive underwriting SaaS platform, utilizing **Python, Django, React, AWS (EC2, S3, RDS, Lambda)**, and **machine learning(ML)** models to deliver scalable, **data-driven solutions** that streamlined underwriting processes, enhanced credit decision accuracy, and significantly reduced upper management intervention by 90% in the Buy-Here-Pay-Here industry.

- **Led the full-stack development** of AutoZoom's predictive underwriting SaaS platform, leveraging **Python** and **Django** for backend development and **React** for a responsive, **user-friendly frontend interface**.
- **Architected cloud-based solutions** on **AWS**, utilizing services such as **EC2, S3, RDS, and Lambda** to ensure scalable, high-performance infrastructure capable of handling large volumes of underwriting data and client interactions.
- **Designed and implemented machine learning(ML) models** using **scikit-learn** and **TensorFlow**, enabling custom-fit scoring models for dealerships, improving risk assessment, and optimizing credit decision-making.
- **Developed comprehensive data visualization tools** with **Matplotlib** and **Plotly**, incorporating charts, graphs, drill-downs, PDFs, and exporting features to provide clients with actionable insights into underwriting performance.
- **Implemented CI/CD pipelines** using **Jenkins, Docker, and GitLab CI**, streamlining deployment workflows, reducing release cycles, and ensuring continuous integration and delivery of new features and updates.
- **Integrated AutoZoom DMS SoftLink** for seamless connectivity with dealership management software, enhancing data integration and system interoperability across diverse dealership platforms.
- **Optimized frontend performance** with **React** and **Bootstrap**, ensuring a seamless user experience with intuitive dashboards, interactive data views, and real-time updates for underwriting processes.
- **Automated key regulatory processes**, including the generation and issuance of Adverse Action Letters, to ensure compliance with industry standards and improve operational efficiency.
- **Led a cross-functional Agile team**, conducting sprint planning, daily stand-ups, retrospectives, and coordinating with stakeholders to ensure timely delivery of high-impact features.
- **Mentored junior developers**, fostering a culture of continuous learning, code quality, and adherence to best practices in Python, cloud technologies, and full-stack development.
- **Collaborated with data scientists** and product managers to refine and enhance predictive analytics capabilities, improving portfolio risk management and financial performance metrics for clients.

- **Reduced upper management intervention** by 90% in credit decision processes through the development of automated, data-driven scoring benchmarks, allowing underwriters to make rapid, reliable credit decisions independently.

CleverDev Software

Apr 2017 – Dec 2021 | Remote, Texas

Full Stack & Cloud Engineer

Engineered and deployed a secure, scalable EDI API integration connector for the healthcare industry using **Python, Flask, AWS (EC2, S3, RDS, Lambda)**, and **Docker**, streamlining data exchange with insurers, automating workflows, and reducing billing lag to under one day while ensuring compliance, optimizing cloud infrastructure, and enhancing system performance through serverless architecture and containerization.

- **Designed and implemented a robust EDI API integration connector** using **Python** and **Flask**, enabling seamless data exchange between the client's healthcare platform and insurers, improving operational workflows and reducing billing lag to under one day.
- **Developed RESTful APIs** to facilitate the integration of Electronic Data Interchange (EDI) with external systems, ensuring secure, reliable, and high-performance data transmission and compliance with healthcare industry standards.
- **Architected cloud solutions on AWS**, utilizing services such as **EC2, S3, RDS, and Lambda** to support scalable, cost-efficient processing of large data volumes while maintaining high availability and minimal downtime.
- **Integrated secure data flows** between disparate healthcare systems and insurers, ensuring timely claim processing and improved data accuracy, leveraging **AWS API Gateway, AWS IAM, and AWS Lambda** for seamless cloud-based execution.
- **Optimized workflows and automated processes** through cloud-native services such as **AWS Step Functions** and **DynamoDB**, reducing manual intervention and streamlining the entire claim cycle from submission to resolution.
- **Utilized containerization and orchestration technologies** like **Docker** and **Kubernetes** to improve deployment efficiency, scalability, and consistency across different environments.
- **Enhanced system performance and security** by implementing industry-standard protocols for data encryption, API authentication, and authorization using **OAuth 2.0** and **SSL/TLS**.
- **Developed scalable, serverless architectures** using **AWS Lambda** and **API Gateway**, ensuring fast, cost-efficient processing and API management with reduced infrastructure overhead.
- **Collaborated closely with cross-functional teams**, including healthcare professionals and IT stakeholders, to gather requirements, refine specifications, and ensure seamless deployment of the EDI connector across multiple systems.
- **Implemented CI/CD pipelines** using **Jenkins, GitLab CI, and AWS CodePipeline**, automating the build, test, and deployment processes for faster releases and enhanced product quality.
- **Monitored and maintained system health** using **AWS CloudWatch** and **New Relic**, ensuring real-time tracking of system performance, availability, and quick issue resolution.

Cognizant

Aug 2013 – Mar 2017 | On-site, New York

Full Stack Engineer

Contributed to the development and modernization of **HL's Online Trading Platform**, where I worked as part of a cross-functional team to enhance and optimize the platform's performance, scalability, and security, supporting both internal and external APIs to deliver an improved user experience.

- Led the full-stack development of new features and enhancements for HL's online trading platform, utilizing **Java** for backend services and **Python** for data processing and API integrations, ensuring that new functionalities aligned with modern web standards and client requirements.
- Worked on the front-end modernization, using **React** and **Redux** to improve the user interface (UI) of the trading platform, enhancing the user experience by introducing new, intuitive features while adhering to best practices in security and accessibility.
- Developed and integrated internal and external APIs for secure communication between the platform and third-party services, using **.NET** for backend API development and **RESTful** standards to ensure seamless data exchange and functionality.
- Enhanced platform security and performance by introducing best practices in secure coding, implementing robust **authentication and authorization** protocols, and optimizing critical system components to improve the scalability and responsiveness of the platform.
- Collaborated closely with cross-functional teams, including product managers, UX/UI designers, and quality assurance (QA) engineers, to gather requirements and deliver features that aligned with HL's digital transformation strategy and business goals.
- Refactored legacy systems to support more modern technologies and improve the platform's overall performance and reliability, utilizing **Java** and **Python** for backend service enhancements, which led to a significant reduction in system downtime and improved transaction speed.
- Utilized **.NET** to develop and maintain backend services, ensuring integration with existing systems and supporting new features designed to enhance the platform's scalability and overall functionality.
- Worked on improving the user experience (UX) for mobile applications by enhancing design and functionality, ensuring the platform was responsive across devices and seamlessly integrated with other financial tools, using **React Native** for cross-platform development and **Redux** for efficient state management.
- Contributed to performance optimization efforts by analyzing and identifying bottlenecks in the platform, using **Java**, **Python**, and **.NET** to refactor code, and implementing caching mechanisms to improve transaction processing times and overall responsiveness.

EDUCATION

Bachelor's Degree, Computer Science

2009 - 2013

The University of Texas at Austin

SKILLS

Programming Languages: *Java, Go, Python, PHP, JavaScript (ES6+), TypeScript, Scala, HTML5, CSS3*

Frameworks & Libraries: *Spring Boot, Spring MVC, Spring Security, Spring Cloud, Hibernate, JPA, Node.js, Laravel, REST APIs, gRPC, GraphQL, React, Next.js, React Native, Angular, Vue*

Web Technologies: *HTML5, CSS3, Thymleaf, Ajax, jQuery, JSON, Bootstrap, SOAP, XML, WSDL, JAXB, JAX-WS*

Databases: *MySQL, PostgreSQL, MongoDB, CouchDB, Redis, DB2, Elasticsearch*

DevOps: *Docker, Jenkins, CircleCI, Kubernetes, Ansible, CI/CD, Terraform*

Cloud Services: *AWS (EC2, S3, RDS, Lambda, DynamoDB, CloudWatch), Microsoft Azure (Azure App Service, Azure Functions, Azure Kubernetes Service), GCP (Google Cloud Platform)*

AI Technology: *Machine Learning (ML), Natural Language Processing (NLP), Large Language Models (LLMs), Generative AI (GenAI), OpenAI, GPT4*

Testing frameworks: *Junit, Mockito, Cypress, Jest, JMeter, Selenium, Cucumber, TestNG*

Management Tools: *Git, GitHub, GitLab, Bitbucket, Jira, Confluence, Maven, Gradle, Grunt, PuTTY, WinSCP, Postman, Swagger*

Scripting Languages: *Shell Scripting, Bash, Perl, PL/SQL*

Other: *Agile Methodologies (Scrum, Kanban), Test-Driven Development (TDD), Behavior-Driven Development (BDD)*
