

# Vinod Alabana

Mainframe Developer | Email: [gangaalabana@gmail.com](mailto:gangaalabana@gmail.com) | PH: (3342334561)

---

## PROFESSIONAL SUMMARY

- Over 7+ years of professional experience in **Mainframe application development and maintenance**, with a strong focus on **COBOL, JCL, DB2, VSAM** in distributed enterprise environments.
- Expertise in **COBOL programming**, including structured and object-oriented approaches, with strong knowledge of **file handling, working storage, linkage section, copybooks, and subprograms**.
- Hands-on experience in writing, analyzing, and optimizing **JCL (Job Control Language)** for batch job executions, file manipulations, and managing production schedules using **CA7, Control-M, or ESP Scheduler**.
- Solid knowledge of **VSAM datasets** including KSDS, ESDS, and RRDS; experienced in using IDCAMS for defining, deleting, and managing VSAM datasets efficiently.
- Strong working experience with **DB2**—writing **complex SQL queries, embedded SQL in COBOL programs, stored procedures, triggers, views, and performance tuning**.
- Familiar with **development methodologies** such as **Agile, Scrum, and Waterfall** in mainframe environments, with experience in contributing to daily stand-ups, sprint planning, and retrospectives.
- Strong knowledge of **Version Control tools** such as **Endeavor, Changeman, Panvalet, and Rational Team Concert (RTC)** for managing mainframe source code and components.
- Experienced in **code optimization and refactoring legacy COBOL applications** for improved performance and maintainability.
- Worked extensively with **file systems** including sequential, partitioned, and VSAM datasets; involved in file conversion, FTP automation, and data cleansing activities.
- Experience in **unit testing, system testing, and integration testing** using tools like **File-AID, QMF, SPUFI, and IBM Debug Tool**.
- Involved in **requirement gathering, impact analysis, system design, code reviews, test case preparation, and documentation** for various business-critical applications.
- Participated in **migration projects** from legacy systems to modern platforms, including re-engineering COBOL modules and JCL jobs.
- Experience in working with **mainframe utilities** such as **IEFBR14, IDCAMS, IEBGENER, IEBCOPY, DFSORT, and SYNCSORT**.
- Skilled in **batch job scheduling**, automation, and monitoring in large-scale enterprise systems to ensure high availability and reliability.
- Developed and maintained **batch and online programs**, ensuring timely execution and delivery with minimal errors and downtime.
- Proficient in interacting with cross-functional teams and business users to gather requirements, understand business processes, and translate them into technical solutions.
- Experience in **integration of mainframe systems with external systems** using MQ Series, APIs, and file-based data exchange.
- Hands-on experience with **OpenText Ex stream** (formerly HP Exstream) for designing, developing, and delivering personalized customer communications across print and digital channels.
- Proficient in using **Quadient Inspire** for creating high-volume, data-driven communications with a strong focus on layout design, rule-based logic, and multichannel output.
- Experience in using **Designer** (OpenText/Exstream Designer Studio) for **developing templates, formatting content**, and managing versioned customer correspondence artifacts.
- Worked closely with **business users and marketing teams** to gather requirements and translate them into templates or dynamic communication logic using CCM platforms.

## TECHNICAL SKILLS

|                        |                                                              |
|------------------------|--------------------------------------------------------------|
| Mainframe Technologies | JCL, COBOL, VSAM, DB2                                        |
| Programming Languages  | C, C++, Java                                                 |
| Tools                  | OpenText Ex stream, Quadient, Tableau, Service Now, Endeavor |
| Web Technologies       | HTML, CSS.                                                   |
| Databases              | SQL, MySQL                                                   |
| DevOps Tools           | JIRA, AWS.                                                   |
| Operating Systems      | Windows, Linux, UNIX                                         |
| Scripting              | Python                                                       |
| Methodologies          | Agile, scrum and traditional SDLC                            |

## PROFESSIONAL EXPERIENCE

### Mainframe Developer

Humana, USA – Health Care Insurance | Charlotte, NC, United States

Jan 2024 - Till Date

#### Responsibilities:

- Worked extensively on **COBOL programming** for batch and online systems, applying structured programming techniques and modular code development using copybooks and subprograms.
- Applied **Mainframe file handling concepts** like **VSAM KSDS/ESDS**, GDGs, and QSAM/PS datasets to manage large-scale transactional data in insurance and financial domains.
- Developed, debugged, and optimized **JCL jobs** with PROC, IF/THEN/ELSE logic, utilities (SORT, IEBGENER, IDCAMS), and symbolic parameters to automate end-to-end job executions.
- Created and maintained **DB2 tables, indexes, views, and stored procedures**, using **SPUFI, QMF, and File-AID for DB2** to handle high-volume insurance and claims data.
- Implemented **CICS online programs** to handle real-time transactions, developing BMS screens and linking them with COBOL logic to provide user-friendly mainframe interfaces.
- Used **File-AID, Abend-AID, and XPEDITER** for testing, debugging, and resolving production issues across COBOL batch and CICS transactions.
- Migrated legacy flat file systems to **VSAM KSDS**, improving file access time and CPU usage efficiency during batch window processing.
- Integrated **NDM (Connect: Direct)** and **FTP/SFTP** for secure data transfer with external vendors and cloud systems, automating file exchange with pre/post-processing JCL.
- Utilized **Control-M and Control-D** for job scheduling and automated report distribution, improving SLA adherence and operational efficiency.
- Involved in **performance tuning of DB2 SQLs and COBOL programs**, reducing batch window time and improving system responsiveness.
- Enhanced **error handling** in COBOL applications by introducing custom ABEND codes, retry logic, and restart mechanisms using checkpoint/restart control tables.
- Created and maintained **IMS and DB2 DL/I programs**, using PCB structures and PSBs for hierarchical and relational data access.
- Participated in the **modernization of mainframe applications**, including analysis of legacy code, breaking monoliths into modular services, and preparing datasets for cloud integration.
- Involved in **Agile-based development and support**, attending daily stand-ups, sprint reviews, and backlog grooming for iterative enhancements in mainframe systems.
- Documented technical specifications, data flows, and functional design for batch and online components, ensuring knowledge transfer and maintainability.

#### Environment:

COBOL, JCL, DB2, VSAM, CICS, IMS, TSO/ISPF, SDSF, File-AID, Endeavor, Changeman, IDCAMS, IEBGENER, IEBCOPY, SORT, Control-M, CA7, Agile, JIRA.

## Software Engineer

Cognizant Technology Solutions

November 2019-May 2023

### Commercial Digital (File Management System and Financial Technology) :

- Enhanced **FMS** and **Fintech applications** in the banking domain, focusing on daily transaction reports and system enhancements.
- Developed and optimized **COBOL** batch programs to generate **customer statements** (loan notices, mortgage reports).
- Integrated **COBOL programs** with **JCL** and **VSAM** to efficiently process large volumes of banking transactions.
- Automated workflows to optimize transaction processing and **report generation efficiency**.
- Collaborated with cross-functional teams to resolve issues and provide **smart solutions**, consistently receiving **client appreciation**.

### Mail Systems:

- Managed **production incidents (P1/P2)** in payment processing, ensuring **100% SLA compliance** through effective **root cause analysis (RCA)** and timely fixes.
- Troubleshoot and resolved **Mainframe-based ACH/WIRE** processing issues using **COBOL, JCL, CICS, DB2, and VSAM**.
- Coordinated with **third-party vendors** (Fiserv, FIS, AFS Vision) for service requests and **enhancements**.
- Developed and maintained a **Mainframe batch system** for generating **client communications** (loan notices, mortgages, and other banking reports).
- Designed and developed **COBOL programs** to process transactions and generate reports for **customers** across the country.
- Implemented **error-handling and recovery mechanisms** in **COBOL** to ensure compliance with banking regulations and **data integrity**.

### Responsibilities:

- Actively involved in the **development, maintenance, and support** of **Mainframe applications** using **COBOL, JCL, DB2, VSAM, CICS** for transaction report generation and payment processing in the **banking domain**.
- Designed and implemented **customer communication templates** using **OpenText Exstream Designer** and **ICM Designer** to meet specific client requirements.
- Integrated **COBOL programs** with **JCL** and **VSAM** datasets for efficient processing of banking transactions, ensuring high levels of accuracy and data integrity.
- Optimized **COBOL batch programs** to generate reports (loan notices, mortgage statements) for clients, reducing processing time and improving report generation efficiency.
- Utilized **ServiceNow** for managing incidents, requests, and change management while ensuring the resolution of **P1/P2 incidents** within agreed SLAs.
- Worked on incident management in payment processing, troubleshooting and resolving issues in **ACH/WIRE** transactions with **COBOL, JCL, CICS, DB2, and VSAM**.
- Developed, tested, and implemented **batch jobs** and automated workflows to improve transaction processing and report generation.
- Designed **error-handling mechanisms** in **COBOL** to ensure smooth processing and recovery from failed transactions, ensuring regulatory compliance.
- Participated in **Agile development** processes, including **requirement gathering, impact analysis, and user story creation**.
- Integrated **Mainframe-based communication systems** for generating reports and customer statements, working with external communication tools for dispatching reports.
- Created **test jobs** in **IT & QV environments**, loading outputs to **VDR & CMOD** for **LOB validation**.

### Environment:

COBOL, JCL, DB2, VSAM, OpenText Exstream Designer, ICM Designer, ServiceNow, Endeavor, SQL, Agile Methodology, JIRA.

**Project Description:**

**Responsibilities:**

- Developed and modified JCL scripts for executing batch processing jobs, ensuring system efficiency and accuracy in processing large datasets.
- Assisted in debugging and testing COBOL programs, ensuring correct calculations and processing of critical business data.
- Worked with VSAM data sets for storing and retrieving large volumes of data, optimizing data access and processing efficiency.
- Automated job scheduling using CA7, reducing dependencies and optimizing batch execution for various system processes.
- Performed unit testing and validation of critical system transactions, ensuring data integrity and consistency across all stages.
- Monitored job execution using SDSF, troubleshooting issues and ensuring smooth processing of batch jobs in production.
- Implemented JCL condition codes for handling job dependencies and automating failure recovery to ensure uninterrupted processing.
- Collaborated with senior developers to document job workflows and optimize execution times, improving overall system performance.
- Identified performance bottlenecks in batch processes and implemented optimizations, improving resource utilization and execution time.
- Enhanced the efficiency of JCL scripts by leveraging inline procedures and reducing redundant steps, achieving faster job completions.
- Integrated error handling mechanisms into batch jobs to minimize system downtime and ensure smooth operations during execution.
- Used JCL utilities to generate detailed error reports and logs, aiding in quick identification and resolution of issues.
- Contributed to documentation of the batch job process and provided recommendations for future updates and optimization.

**EDUCATION**

- Computer Science in Masters Auburn University At Montgomery, Alabama, US Aug 2024.
- Bachelor of Technology Electrical and Electronics Engineering, Jawaharlal Nehru Technological University Kakinada, India January 2019.

**PUBLICATIONS**

- IoT-Based Web-Controlled Home Automation Using Raspberry Pi, International Journal of Scientific Research in Science, Engineering, and Technology (IJSRSET), 2019.
- Smart Baggage Tracking System with Theft protection, IEEE, 2025.

**AWARDS**

- Best Graduate Poster Presentation, 2024 College of Science Research Symposium, Auburn University at Montgomery, US, 2024, Third Place.
- ROLL OF THE HONOR AWARD, College Level, 2015-2019, Winner.
- Yogathon Challenge, World Health Day, 04/07/12, Completed 108 rounds of Surya namaskar and received a golden certificate.
- National Level Technical Paper Project Contest and Exhibition, GMRIT, 02/04/18, Third Prize.
- Entrepreneurship Awareness Camp, Organized by RITV under NSTEDB, Govt. of India, New Delhi.
