

# Jeevan Kachihalli

Senior .NET Full Stack Developer | Azure | Microservices | API Development | Angular | Cloud Architect

[jeevankachihalli@gmail.com](mailto:jeevankachihalli@gmail.com) | +1361-933-9129 | [LinkedIn](#)

## PROFESSIONAL SUMMARY

- Senior .NET Fullstack Developer with 9+ years of experience designing, developing, and deploying enterprise-grade web applications, microservices, and APIs across multiple domains. Expert in .NET frameworks (.NET 3.x / 5 / 6 / 7 / 8, VB.NET, C#, ASP.NET Core/MVC, Entity Framework 5/6/Core) and modern frontend technologies (Angular 2–14, React, Vue 3, GraphQL, Tailwind CSS, Bootstrap) for dynamic, modular, and scalable solutions.
- Expert in .NET frameworks, VB.NET, C#, ASP.NET Core, ASP.NET MVC, and Entity Framework for developing scalable, maintainable, and high-performance backend services with layered architecture, and modular design patterns.
- Proficient in frontend frameworks including Angular, React, Vue, Angular Material, Tailwind CSS, Bootstrap, and GraphQL for building dynamic, responsive, and component-driven user interfaces with micro frontends and modular architecture.
- Hands-on experience designing and securing RESTful APIs and gRPC services using Clean Architecture, CQRS patterns, SOLID principles, asynchronous messaging, and token-based authentication for resilient, enterprise-grade integrations.
- Expertise in event-driven and serverless architectures using Azure Functions, Durable Functions, Azure Logic Apps, AWS Lambda, and API Gateway for high-throughput processing.
- Skilled in cloud-native development across Azure (App Service, API Management, Key Vault, Event Grid, Event Hubs, Service Bus, AD, RBAC, Zero Trust) and AWS (Lambda, ECS, EKS, X-Ray).
- Experience with containerization and orchestration using Docker, Helm, Azure Kubernetes Service (AKS), service mesh, and micro frontends for scalable deployments.
- Proficient in Infrastructure as Code and DevOps practices using Terraform, Terraform Cloud, ARM Templates, Azure Bicep, CloudFormation, GitHub Actions, Azure DevOps, and Jenkins CI/CD pipelines.
- Strong database design and optimization skills with SQL Server, Oracle, PostgreSQL, Cosmos DB, Redis, and Azure Table Storage for structured and semi-structured data management.
- Monitored and optimized applications using Azure Monitor, Application Insights, Log Analytics, Prometheus, Grafana, OpenTelemetry, and Serilog for observability and performance tuning.
- Implemented secure coding standards and enterprise identity management using Azure AD, MSAL, IAM, RBAC, Zero Trust frameworks, and Azure Defender to enforce regulatory compliance and protect data across cloud and on-prem environments.
- Designed and delivered modular microservices architectures, refactoring legacy monoliths, applying dependency injection, service orchestration, and event-driven patterns to ensure maintainability, scalability, and independent deployability.
- Developed and maintained automated testing strategies using xUnit, MSTest, NUnit, FluentValidation, and SonarQube, enabling high-quality, reliable code with continuous feedback across CI/CD pipelines.
- Built interactive, real-time dashboards and visualization platforms by integrating frontend microservices with GraphQL APIs, enabling actionable insights and data-driven decision-making for business and operations teams.
- Implemented robust CI/CD pipelines with automated builds, unit and integration testing, artifact versioning, environment promotion, and rollback strategies across Azure and AWS, ensuring consistent and reproducible deployments.
- Applied Agile and Scrum methodologies, facilitating collaboration across cross-functional teams, continuous delivery of platform enhancements, and alignment with business objectives and technical requirements.
- Strong domain experience in enterprise collaboration, cloud-native platform modernization, healthcare claims processing, and credit risk analytics workflows.

## TECHNICAL SKILLS

1. **Languages:** C#, VB.NET, TypeScript, JavaScript
2. **Frameworks:** .NET 8/7/6, ASP.NET Core, MVC, Entity Framework Core, NHibernate
3. **Frontend:** Angular 14, React, Vue.js, HTML5, CSS3, Bootstrap, Tailwind CSS
4. **Cloud:** Azure (Functions, Event Grid, AKS, App Service), AWS (Lambda, ECS, EKS)
5. **DevOps:** Terraform, Azure DevOps, GitHub Actions, Jenkins, ARM, Bicep
6. **Databases:** SQL Server, Oracle, PostgreSQL, Cosmos DB, Redis
7. **Monitoring:** Azure Monitor, Grafana, Prometheus, App Insights, Serilog
8. **Testing:** xUnit, NUnit, MSTest, SonarQube, FluentValidation

## WORK EXPERIENCE

**ARGANOKESTE, PLANO, TX | SENIOR .NET FULLSTACK DEVELOPER**

**JAN 2025 – PRESENT**

**Project:** Cloud-Native Enterprise Digital Platform Modernization

- Designed and developed modern enterprise applications using .NET 8, C#, Blazor Server/WebAssembly, Fluent UI, and Entity Framework Core.
- Built scalable and secure reporting frameworks by modernizing legacy reports (Crystal Reports + Oracle PL/SQL) into Blazor-based dashboards.
- Optimized Oracle PL/SQL procedures, packages, and triggers for seamless database integration and high-performance reporting workflows.
- Collaborated with DevOps teams to enhance and maintain CI/CD pipelines with Azure DevOps, Jenkins, and Bitbucket.
- Designed advanced data models to support complex financial and transactional systems, ensuring alignment with business requirements.
- Partnered with business stakeholders to analyze requirements and translate them into technical specifications and scalable solutions.
- Applied Agile/Scrum methodology throughout the SDLC, participating in sprint planning, daily standups, retrospectives, and backlog refinement.
- Ensured compliance with accessibility standards (WCAG 2.0/Section 508) and industry best practices for secure and user-friendly applications.
- Provided innovative solutions to modernize legacy systems, streamline workflows, and align development efforts with organizational goals.

**Environment:** .NET 7 / .NET 8, Durable Functions, Azure Logic Apps, Azure API Management, Dapr, KEDA, Helm, Azure Bicep, Azure Event Grid, Azure Event Hubs, Azure Service Bus, Azure Policy, Azure Sentinel, Azure Monitor, Log Analytics, Prometheus, Grafana, OpenTelemetry, Azure Defender, Azure Security Center, Managed Identities, RBAC, Zero Trust, Angular 14, React, Vue 3, GraphQL, Micro Frontends, MSAL, Visual Studio 2022, Terraform Cloud, GitHub Actions, Service Mesh

**CITRIX, RICHARDSON, TX | .NET FULLSTACK ENGINEER**

**MAR 2023 – DEC 2024**

**Project:** Enterprise Collaboration Platform Modernization

- Developed RESTful APIs and gRPC services using .NET Core 3.1 / .NET 5 / .NET 6 following Clean Architecture and CQRS patterns to handle high-throughput collaboration workflows.
- Implemented request validation and business logic enforcement using FluentValidation within MediatR pipelines, enabling centralized command/query validation, and consistent rule execution across backend services.
- Built responsive and modular frontend modules using Angular 10/12, Angular Material, and Tailwind CSS, incorporating component-based architecture, and adaptive layouts to ensure consistent user experiences across devices.
- Designed asynchronous caching and optimized data access strategies with Cosmos DB and Redis, leveraging distributed caching, TTL policies, and query optimization to improve read/write efficiency and reduce backend latency for collaboration workflows.
- Integrated secure credential management and authentication workflows using Azure Key Vault and Azure Active Directory, implementing managed identities, and seamless single sign-on across microservices and client applications.
- Developed serverless functions using Azure Functions to handle event-driven operations, background processing, and lightweight compute tasks, integrating triggers from Service Bus and HTTP endpoints for modular and scalable backend workflows.
- Automated infrastructure provisioning and environment configuration using ARM Templates and Terraform, implementing modular templates, and version-controlled infrastructure to ensure reproducibility and audit compliance across environments.
- Containerized microservices and backend components using Docker and deployed to Azure Kubernetes Service (AKS) via Azure Container Registry, and namespace segregation to improve scalability, resiliency, and maintainability.
- Created and maintained API documentation and testing suites using Swagger, implementing versioned API contracts, interactive endpoints, and automated validation to enable seamless integration and collaboration between backend and frontend teams.
- Integrated application telemetry, logging, and distributed tracing using Application Insights and Serilog, enabling real-time monitoring, and proactive issue diagnostics across microservices and serverless components.
- Configured feature flags and dynamic application settings using Azure App Configuration, enabling runtime control of functionality, and environment-specific configuration management across microservices.
- Applied static code analysis using SonarQube to enforce coding standards, detect security vulnerabilities, and identify code smells, supporting maintainable, high-quality code and reducing technical debt across the platform.
- Refactored legacy monolithic modules into microservices architecture, following SOLID principles and clean architecture patterns, implementing dependency injection, modular service boundaries, and independent deployment pipelines to enhance maintainability and scalability.
- Implemented role-based access control (RBAC) and identity management within APIs and backend services, integrating Azure Active Directory for secure authentication and authorization, ensuring compliance with enterprise security policies and regulatory standards.

- Collaborated with cross-functional teams to deliver incremental platform features, integrating CI/CD workflows with Visual Studio 2019, Azure DevOps pipelines, and automated testing frameworks.

**Environment:** .NET Core 3.1 / .NET 5 / .NET 6, ASP.NET Core Web API, MediatR, FluentValidation, Clean Architecture, CQRS, gRPC, Angular 10/12, Tailwind CSS, Cosmos DB, Redis, Docker, Azure Functions, Azure Key Vault, Azure AD, ARM Templates, Terraform, Azure Container, AKS, Swagger, SonarQube, Serilog, Application Insights, Azure App Configuration, Visual Studio

**PREMIER INC, CHARLOTTE, NC | SENIOR .NET APPLICATION DEVELOPER**

**MAR 2021 – FEB 2023**

**Project:** Cloud-Native Healthcare Claims Processing Platform

- Designed and developed enterprise healthcare applications using ASP.NET Core MVC, C#, Entity Framework, and Oracle/SQL Server databases.
- Analyzed and modernized complex legacy reports (Crystal Reports + Oracle PL/SQL), migrating them to modern reporting frameworks with improved performance and scalability.
- Implemented secure handling of healthcare claims and HIPAA-protected PHI data, ensuring compliance with federal and state regulations.
- Developed responsive front-end components with Blazor, Razor, jQuery, AJAX, Bootstrap, and JSON, ensuring accessibility compliance (WCAG 2.0/Section 508).
- Created and optimized PL/SQL stored procedures, functions, and triggers for healthcare data workflows and claims processing.
- Collaborated with cross-functional teams, including DevOps, to enhance CI/CD pipelines and automation workflows.
- Participated in all phases of the Agile/Scrum SDLC, including sprint planning, backlog refinement, peer code reviews, and integration testing.
- Partnered with business stakeholders to translate healthcare compliance requirements into technical specifications and scalable solutions.

**Environment:** .NET Core 3.x, REST APIs, AWS Lambda, AWS API Gateway, AWS ECS/EKS, Terraform, CloudFormation, Jenkins, AWS CodePipeline, AWS CodeBuild, AWS X-Ray, Git, Entity Framework Core

**ZENSAR TECHNOLOGIES (TRANSUNION, ILLINOIS, US) | .NET APPLICATION DEVELOPER**

**JUN 2018 – OCT 2020**

- Designed and developed enterprise applications using C#, ASP.NET MVC, WCF Services, and .NET Framework, enabling SOA-based system integrations.
- Built and optimized Oracle PL/SQL packages, stored procedures, triggers, and schema designs to support financial case management workflows.
- Developed SOAP and RESTful services with WCF and Web API, ensuring secure and reliable communication between internal and external systems.
- Collaborated with business analysts to interpret requirements and translate them into efficient application logic.
- Improved database performance through query tuning, indexing, and schema optimization in Oracle and SQL Server.
- Participated in Agile Scrum ceremonies, unit testing, and peer code reviews, ensuring adherence to best practices and coding standards.

**Environment:** VB.NET, .NET Framework 4.8, ASP.NET Web API, Entity Framework 6, NHibernate, SQL Server, Oracle, PostgreSQL, Angular 2/4/8, TypeScript, RxJS, Castle Windsor, Unity, xUnit, MSTest, Azure Queue Storage, Azure Table Storage, Azure SQL, Azure DevOps, Azure Repos, Visual Studio 2015

**CYIENT, HYDERABAD, INDIA | SOFTWARE ENGINEER I – .NET DEVELOPER**

**MAR 2016 – MAY 2018**

- Developed web modules with C#, ASP.NET MVC 5, and Entity Framework 5 to automate enterprise workflows.
- Built responsive UI components using AngularJS 1.x, JavaScript, HTML5, and Bootstrap, enhancing user interaction.
- Designed and optimized SQL Server 2012 queries and schemas, improving data retrieval performance.
- Applied Autofac-based dependency injection for modular, maintainable, and testable code.
- Implemented role-based authentication and authorization in ASP.NET MVC, securing workflow access.
- Conducted unit testing with NUnit, ensuring reliable module functionality before release.
- Deployed applications to Azure App Service and integrated Azure Blob Storage for document management.
- Managed source control and CI workflows via Git and TFS, standardizing collaboration.
- Refactored MVC controllers and data access layers to optimize server-side performance.
- Collaborated with cross-functional teams to iteratively deliver features aligned with business workflow requirements.

**Environment:** C#, .NET Framework 4.5, ASP.NET MVC 5, Entity Framework 5, SQL Server 2012, IIS, AngularJS 1.x, JavaScript, HTML5, Bootstrap, NUnit, Autofac, Azure App Service, Azure Blob Storage, Git, TFS, Visual Studio 2013
