

Shiwali Rai

Minneapolis, MN | 4143385250 | shiwalirai2490@gmail.com

SUMMARY

- Business Analyst with over 5 years of overall IT experience in Business Analysis, Data Analytics and Project Coordination with the ability to work independently and manage business expectations with a delivery-focused approach to work.
- Proficient in understanding Business Requirements and partnering to prioritize design and deliver a focused business solution.
- Employed proper elicitation techniques in accordance with project environment such as JAD, Discovery sessions, brainstorming, questionnaire, surveys, and focus group, etc.
- Developed and maintained Agile artifacts like product backlog, user stories, sprint backlog, and burndown chart.
- Foster collaborative working relationships within operations and across all levels and departments of the organization to execute project coordination activities and company priorities.
- Built interactive dashboards and reports in Power BI, visualizing key business metrics such as sales performance, customer trends, and operational KPIs.
- Skilled in researching for transitioning to new technologies by performing feasibility study, GAP analysis.

WORK EXPERIENCE

Business Analyst, Rightpoint , Chicago IL

JULY 2023- TILL NOW

- **Conducted detailed business requirements** gathering through interviews, workshops, and surveys, reducing project timelines by 20%.
- Analyzed and documented business processes, identifying key inefficiencies and implementing solutions that improved operational efficiency by 30%.
- **Collaborated with cross-functional teams, bridging communication between stakeholders** and developers to ensure alignment on project goals and requirements.
- **Led requirement analysis sessions and documented functional and non-functional requirements**, ensuring clear understanding for project teams.
- **Utilized data analysis tools like SQL, Excel, and Tableau** to create insightful reports and dashboards, supporting data-driven decision-making for stakeholders.
- **Developed and maintained optimized Power BI data models** by designing star schema and data warehouse concepts, improving report performance and reducing data load times by 35%.
- **Developed and maintained process flow diagrams**, use case documentation, and other artifacts, providing a clear understanding of system functionalities.
- **Conducted gap analysis** to identify areas for improvement, recommending solutions that reduced processing time and increased customer satisfaction.
- **Used Power Query for data transformation tasks, cleaning, and merging data** from multiple sources, ensuring high-quality, consistent, and accurate datasets for analysis.
- **Created complex DAX formulas** to calculate business KPIs, sales forecasts, profit margins, and customer lifetime value, enabling better insights into business performance.
- **Spearheaded the implementation of Agile methodologies** across multiple projects, enhancing project adaptability and reducing delivery time by 15%.
- Managed and prioritized a backlog of features and requirements in collaboration with product owners and development teams.
- Facilitated user acceptance testing (UAT), gathering and addressing feedback to ensure product quality and alignment with business needs.
- **Integrated Power BI with Azure data services** to create scalable, cloud-based solutions for reporting and data analysis, enhancing collaboration and access across teams.
- Provided training and documentation for end users on new systems, enhancing user adoption rates and minimizing post-implementation support needs.
- **Created complex Power BI reports by connecting to various data sources including SQL Server, Excel, and web-based APIs**, allowing seamless data integration and analysis across multiple departments.
- **Transformed raw data into insightful visualizations, applying advanced DAX measures**, calculated columns, and custom visualizations to provide actionable business insights.
- **Improved reporting processes by developing dynamic Power BI reports** that auto-refresh based on scheduled data updates, reducing manual effort and improving report accuracy.
- Leveraged business intelligence tools to monitor KPIs, track project progress, and identify risks, improving reporting accuracy by 25%.
- Supported change management initiatives by coordinating with teams on new technology implementations, ensuring smooth transitions and minimized disruptions.
- Engaged in strategic planning with senior leadership, contributing insights that supported long-term business goals and growth.

Business Analyst – Data Visualization, Rupaayan, Jaipur, Rajasthan

NOV 2017- JAN 2022

- As a Business Analyst I worked in **Supply chain Module** to gather requirement from the Stakeholder and created the specification

document for the Developer in the team.

- Worked with Developer to get the **data from SAP tool to AWS cloud DAP (Data Analytics Platform)** as per the requirement and validated it with Client.
- Helped the team in creation of **Supply chain KPIS like Forecast and Accuracy**, On time Delivery for the dashboard in Quick sight.
- **Used Conditional Split, Lookup, and Derived Column transformations** to ensure accurate data processing in ETL pipelines
- **Developed and maintained SSIS packages for data extraction, transformation, and loading, and created SSRS reports** to deliver insightful analytics to stakeholders, enhancing decision-making processes.
- **Implemented parallel processing and batch processing in SSIS** to handle large volumes of data more efficiently, significantly improving processing time for large data loads.
- Responsible for end-to-end service delivery including design, build and maintain automated reports and dashboards leading to self-service analytics and/or improved business decisions.
- **Incorporated data validation and cleansing logic within SSIS packages** to identify and correct data quality issues during the ETL process, ensuring that only accurate and consistent data was loaded into data stores.
- Ability to understand and analyze data for the purpose of identifying trends and providing insights to the various stakeholders to unlock potential value for business.
- Automated data refreshes and report generation using SSIS packages, ensuring that business users always had access to the most up-to-date data with minimal manual effort.
- Handled ETL package deployment with parameters and environment settings for consistent production integration.
- **Used SQL Server Agent to schedule and automate SSIS packages**, enabling the timely refresh of data loads and the automated generation of reports in Power BI.
- **Employed Fuzzy Lookup, Merge, and Union All transformations** to enhance data quality and consistency across sources.
- Manage and execute reporting and analytical projects from start to finish including project management, data gathering and manipulation, estimation, synthesis and modeling, problem solving, and communication of insights and recommendations.
- Having the experience working in a fast-paced environment, comfortable navigating.
- **Utilized For Each Loop Containers to automate** repetitive tasks and reduce manual effort.
- Implemented Slowly Changing Dimension (SCD) techniques for managing historical data in warehouses.
- Coordinating with different functional teams to implement dashboards, models and monitor outcomes.
- Evaluate and drive continuous improvements/ innovation in reporting/ advanced analytics.
- **Analyzed and documented business requirements** for transportation and logistics software solutions, collaborating with stakeholders to optimize operational processes in truck, rail, and ocean logistics.
- **Led Agile projects** by working closely with cross-functional teams, utilizing **Scrum** and **Kanban** frameworks to deliver high-quality software solutions within defined timelines using tools like **JIRA** and **Trello**.
- **Managed and enhanced Transportation Management Systems (TMS)**, ensuring that business needs were met through continuous software updates, process improvements, and integration with existing logistics operations.
- **Performed data analysis** using tools like **Excel**, **SQL**, and **Power BI** to identify trends, optimize logistics processes, and provide actionable insights for better decision-making in transportation and supply chain management.
- **Facilitated communication** between technical teams and business stakeholders to ensure clear understanding of requirements, prioritized product backlogs, and supported user acceptance testing for software solutions.

PROJECT EXPERIENCE

BUSINESS ANALYST TRAINING – UDEMY:

- Understanding the business objective, critical and analytical thinking, and communication skills.
- Strong experience in Customer Service.
- Excellent management of customer reports
- Proficient in handling customer relationships.

SKILLS

- Business Analysis & Project Coordination: Requirements gathering, Agile, user stories, GAP analysis, stakeholder management.
- Data Analytics & Visualization: Data modeling, SAP to AWS integration, KPI development, QuickSight dashboards, decision-making insights.
- Project Management: End-to-end delivery, cross-functional collaboration, report automation.
- Tools & Technologies: MS Visio, SAP, AWS, QuickSight, SQL, Excel.
- Agile Methodology: Scrum, backlog management, Sprint planning.
- Elicitation Techniques: JAD sessions, brainstorming, surveys, focus groups.

EDUCATION

- Masters of Business Administration- Management information System / Concordia University
- Bachelors Of Commerce- From Bhavans Vivekananda College

March 2022- Dec 2023

July 2014
