

HARSHAVARDHAN REDDY BATTULA

Dot Net Full Stack Developer

Location: [Tennessee, USA](#) | E-Mail: Harsha4c4@gmail.com | Ph: [+19134840739](tel:+19134840739) | [LinkedIn](#)

PROFESSIONAL SUMMARY

5+ years of experience as a Highly Skilled Full Stack Dot NET Developer with extensive experience in designing and developing secure, high-performance financial and insurance applications. Proficient in engineering RESTful APIs, gRPC services and GraphQL-based APIs. Expertise in implementing OAuth 2.0, OpenID Connect and JWT-based authentication for robust access control. Adept at developing automated regression and integration test suites using xUnit, NUnit, Postman, Swagger and SoapUI. Experienced in Agile Scrum methodologies using JIRA and Confluence. Skilled in designing and developing Blazor and Angular-based financial dashboards and implementing dynamic UI components with WebSockets (SignalR). Proficient in integrating third-party financial APIs including Plaid, Bloomberg and FIX Protocol and implementing secure .NET-based investment and retirement policy forms. Experienced in Azure Functions and Hangfire for background job processing and integrating Apache Kafka for event-driven architectures. Skilled in developing ASP.NET Core Web APIs for policyholder claims management, integrating Azure API Management and Azure AD B2C and utilizing Azure Blob Storage and Azure Service Bus. Experienced in enhancing insurance portal UI using Angular 12 and ReactJS. Proficient in developing CI/CD pipelines using Jenkins and GitLab CI, utilizing Redis for caching strategies, managing SQL and NoSQL databases and implementing monitoring and logging with the ELK Stack.

TECHNICAL SKILLS

Programming Languages:	C, C#, LINQ
Frameworks & Libraries and Front-End Development	ASP.NET MVC, ASP.NET WEB API, .NET Core, Entity Framework, Blazor, React.js, Angular, JavaScript and typescript, HTML, CSS, WebSockets (SignalR)
API Architectures & Web Services:	RESTful APIs, GraphQL, gRPC, OpenAPI (Swagger), FIX Protocol, SOAP UI
Cloud & DevOps:	Azure Functions, Azure API Management, Azure Blob Storage, Azure Service Bus, AWS Lambda, API Gateway, Logic Apps
Databases:	SQL Server, PostgreSQL, MongoDB
Security & Authentication:	OAuth 2.0, OpenID Connect, JWT, Azure AD B2C, PCI DSS Compliance, Identity & Access Management
Testing & Automation:	xUnit, NUnit, Postman, Swagger, SoapUI, Jest, Cypress, Selenium WebDriver, JMeter
Event-Driven & Messaging:	Apache Kafka, WebSockets, SignalR, Azure Service Bus
Monitoring & Logging:	ELK Stack (Elasticsearch, Logstash, Kibana)
Version Control & Collaboration:	Git, GitHub, GitLab, Bitbucket, JIRA, Confluence, Agile (Scrum, Kanban), Waterfall
CI/CD & Deployment:	Jenkins, GitLab CI/CD, Docker, Kubernetes, Azure Devops
Business & Domain Expertise:	Banking & Financial Services, Trading Systems, Insurance & Claims Processing, Regulatory Compliance

PROFESSIONAL EXPERIENCE

State Street – MO | Dot Net Developer | Jul 2024 - Current

- Engineered secure and high-performance RESTful APIs and gRPC services to facilitate real-time stock, forex and derivatives trading, reducing API response times.
- Developed GraphQL-based APIs to optimize financial data fetching and reduce payload sizes by 35%, improving performance of client-facing trading applications.
- Implemented OAuth 2.0, OpenID Connect and JWT-based authentication to ensure secure access control in banking and financial applications.
- Developed automated regression and integration test suites (xUnit, NUnit, Postman, Swagger, SoapUI) to ensure the reliability of financial applications.
- Collaborated with quants, financial analysts and business teams to translate complex financial models and risk algorithms into scalable .NET solutions.
- Managed Agile Scrum sprints using JIRA and Confluence, ensuring timely delivery of regulatory-compliant financial software solutions.
- Conducted user acceptance testing (UAT) sessions with portfolio managers and financial analysts to validate derivatives pricing models and trading features.
- Designed and developed high-performance Blazor and Angular-based financial dashboards, enabling real-time trade monitoring, market trend analysis and risk exposure visualization, reducing decision-making.
- Implemented dynamic UI components with WebSockets (SignalR) for real-time order book synchronization, portfolio tracking and instant trade execution updates, enhancing trader efficiency by 40%.
- Developed and integrated secure third-party financial APIs (Plaid, Bloomberg, FIX Protocol) for real-time market data ingestion, trade execution and portfolio management, ensuring seamless interoperability with external financial institutions while maintaining PCI DSS compliance.

- Designed and developed secure, high-performance .NET-based investment and retirement policy forms, integrating business rules and regulatory compliance checks, ensuring accurate user data capture and validation.
- Implemented automated workflows to transmit form data to downstream financial systems, triggering real-time processing, approval workflows and automated confirmation emails, reducing manual processing time by 50%.
- Implemented Azure Functions and Hangfire-based background job processing to asynchronously execute high-frequency trade reconciliations, risk assessments and compliance checks, reducing trade settlement delays by 45% and ensuring real-time financial accuracy.
- Integrated Apache Kafka-based event-driven architecture to handle millions of market data updates per second, ensuring low-latency processing of stock price fluctuations.

Zensar Technologies – India | Software Developer | Apr 2022 - Jun 2023

- Optimized digital claims processing workflow, reducing claim settlement time by 40% through the development of secure and efficient ASP.NET Core Web APIs for policyholder claims management.
- Integrated Azure API Management for insurance policy and claims data, ensuring secure API authentication, rate limiting and reducing security vulnerabilities by 35%.
- Designed and maintained RESTful APIs for policy administration and claims processing using ASP.NET Core Web API, improving system scalability and security.
- Implemented identity and access management using Azure AD B2C, ensuring secure authentication for policyholders, agents and third-party insurance service providers.
- Developed services for policy issuance, premium calculations and claims adjudication using Layered Architecture, improving system maintainability and scalability.
- Integrated Azure Blob Storage to securely store and manage insurance policy documents, claims evidence and customer records while ensuring compliance with IRDAI regulations.
- Implemented Azure Service Bus for asynchronous processing of claims approvals alerts, enhancing system reliability and scalability.
- Enhanced insurance portal UI using Angular 12 and ReactJS, improving user experience for agents and customers and reducing policy purchase time by 25%.
- Worked in Agile Scrum teams, actively participating in sprint planning, backlog refinement and retrospectives using JIRA, improving project tracking and feature delivery.
- Conducted unit testing (NUnit) and API testing (Postman) for policy and claims processing modules, achieving 98% test coverage and reducing post-deployment defects.

Cognizant – India | Programmer Analyst | Feb 2019 - Mar 2022

- Engineered a comprehensive insurance management system utilizing AWS services, achieving a notable 30% reduction in operational costs through the implementation of a serverless architecture.
- Spearheaded the creation of a Progressive Web App with React.js, resulting in a substantial 50% increase in user engagement and retention metrics.
- Optimized and maintained a microservices architecture to guarantee high availability and fault tolerance, ensuring uninterrupted service delivery.
- Developed and executed Continuous Integration and Continuous Deployment (CI/CD) pipelines using Jenkins and GitLab CI, leading to a 60% decrease in deployment times and enhancing release efficiency.
- Conducted extensive unit and integration testing with Jest and Postman, achieving over 85% code coverage and ensuring high-quality deliverables.
- Designed and implemented advanced caching strategies utilizing Redis, resulting in a 35% improvement in application response times and overall performance.
- Managed and optimized both SQL and NoSQL databases, focusing on performance tuning to ensure efficient data storage and retrieval processes.
- Developed real-time communication capabilities using Web Sockets, significantly enhancing user experience by enabling instant updates and interactions within the application.
- Collaborated closely with UI/UX designers to develop responsive and user-friendly interfaces, ensuring a seamless experience across diverse devices and platforms.
- Implemented comprehensive monitoring and logging frameworks using the ELK Stack (Elasticsearch, Logstash and Kibana), which enhanced system observability and facilitated proactive issue resolution.
- Developed automated testing frameworks for end-to-end testing with Cypress and Selenium, ensuring thorough validation of application functionality and user flows.
- Integrated OAuth 2.0 for secure user authentication and authorization, establishing robust security measures to protect user data and ensure compliance with industry standards.

EDUCATION

Master of Computer Science - University of Central Missouri, Missouri, USA

Bachelor of Electronic and Communication Engineering – Jawaharlal Nehru Technological University, Telangana, India
