Professional Experience:

1. Business Analyst Commiitt LLC, Edison, NJ

(Apr 2025 to Present)

Key Responsibilities

- Assist in collecting business and system requirements from stakeholders.
- Document these requirements into BRDs and User Stories.
- Help translate business needs into technical specifications for developers and QA teams.

2. Sr. Business Analyst (Level 4.5 (Sr Associate Manager) - Jul 2017 to Mar 2025)

Key Responsibilities

- Good at Gathering, Analysing, Organising, Prioritization and Understanding the requirements.

- Led the successful Onboarding of new and existing Hospital, Physician, and self-pay clients into the SutherlandRev application with 100% SLA adherence.
- Played a vital role in gathering the requirements for implementing the claim status automation module into SutherlandRev.
- Analyse business problems and provide solutions to the operation teams.
- Interviewed Stakeholders and SMEs to get a better understanding of Client business processes and gather business requirements.
- Excellent team player to work in conjunction with Testers, Developers and other team members in validation and testing of project scenarios.
- Created Business Requirement Documents (**BRD**) and System Requirement Specifications (**SRS**) to guide development and testing teams.
- Provide training needs to end user's teams and welcome feedback and improvements.
- Clarify queries related to functionalities and other information related to the product.
- Maintained and prioritized product backlog based on business value and client feedback.
- Provide production support to SD team after Onboarding **Hospital, Physician and Self-Pay** Clients.
- Identified **Automation** opportunities and collaborated with **SD and RPA** teams to optimize workflows.
- Actively Participated in internal presentations and discussions.
- Delivered Functional and User Acceptance Testing (**UAT**) resulting in high quality product releases.
- Take ownership of projects from beginning to end.
- Played a key role in onboarding various **AR** and **Self-Pay** Clients into the system without any difficulties.

Project 1: Claim Status End to End Module

Employer: Sutherland Healthcare Solutions

Objective: Implement automation to streamline claim status retrieval thru **RPA/ EDI**, reducing manual intervention and improve the productivity.

Responsibilities

- Gathered the requirements from Service Delivery team for the accounts to be qualify for the claim status request.
- All the qualified accounts will be shared with **RPA and EDI** teams to capture the claim status responses from the respective payor websites.
- Once the claims status responses received from **RPA/ EDI**, these responses will be loaded into SutherlandRev.
- Will validate the daily **RPA/ EDI** responses (**ANSI Codes**) extract and map the Claim Status Codes (**CSC**) for the **RPA** Remarks which we didn't receive the **CSC's**.
- Will validate the **RPA** responses manually in Payor website and share the found issues with **RPA** team to fix it.
- Once the issues are fixed then same will be validated in **UAT** environment and release to Production.

Project 2: Dialer Integration

Employer: Sutherland Healthcare Solutions

Objective: Reduce agent wait times by automating insurance call flows and integrating a **Smart Dialer** system.

Responsibilities

- Gathered the requirements from Service Delivery team for the accounts to be qualify for the Dialer work pool.
- Tested the **insurance call flows**.
- Automated the process of inserting all the mandatory data which has to be provided before the call to be placed in the queue.
- Once the call is connected to insurance rep, immediately call will be connected to the Agent to get the claim status response.

****Also involved in other **Process Level Automation** projects****
