

JAGADEESHWAR K

jagadeeshwar796@gmail.com | 9132296940 | linkedin.com/in/jagadeeshwar-k

SUMMARY

- Full Stack Developer with 8 years of experience building scalable web applications across finance, healthcare, and tech, leading the development of RESTful and GraphQL APIs using Java, Spring Boot, Node.js, React, and TypeScript.
- Built and deployed cloud-native applications on AWS and Azure using Docker, ECS, EKS, and Kubernetes, reducing deployment times by 30% through automated CI/CD pipelines with Jenkins and AWS CodePipeline.
- Optimized database performance for AWS RDS, DynamoDB, MySQL, PostgreSQL, and MongoDB, improving query performance by 40% and enabling more efficient data processing.
- Built responsive front-end applications with React, Angular, and TypeScript, enhancing user engagement and improving load times by 15%.
- Engineered data integrations and ETL workflows with Kafka, Snowflake, and Spark, streamlining data pipelines and reducing data processing time by 25%.
- Implemented automated testing and maintained system health using JUnit, Mockito, Selenium, Postman, and Splunk, ensuring stable and high-performing applications.

SKILLS

Languages: Java (OOP, Collections, Multi-threading, Servlets, JSP, JDBC, Design Patterns), Python, JavaScript, TypeScript

Frameworks: Spring (Boot, WebFlux, MVC, Security, Data JPA, Cloud, Batch), Hibernate, Node.js, Angular, React, Redux

Cloud & DevOps: AWS (EC2, S3, Lambda, ECS, API Gateway, RDS, DynamoDB, IAM, CloudFormation, CodePipeline, EKS), Azure, Linux/Unix, Docker, Kubernetes, OpenShift, Jenkins, Terraform

Databases & Processing: MySQL, PostgreSQL, Oracle, MongoDB, Elasticsearch, Kafka, Spark, Redis, Snowflake, Power BI

Web Technologies & APIs: HTML5, CSS3, XML, JSON, JQuery, REST APIs, GraphQL, Swagger

Testing & Build Tools: Maven, Gradle, Git, Test Driven Development, JUnit, Mockito, Selenium, Cucumber, Postman

Monitoring & AI: Splunk, Dynatrace, Grafana, Prometheus, ELK, Spring AI, LLM, RAG

Certifications: AWS Certified Solutions Architect – Associate, Harness Certified Continuous Delivery & GitOps Developer

EXPERIENCE

TIAA, Full Stack Java Developer

02/2023 – Present | Charlotte, NC

- Designed scalable RESTful APIs using Java and Spring Boot to process over 10 million events daily, powering digital analytics dashboards for cross-functional business insights.
- Applied Java 8+ features (Lambdas, Streams, Completable Future, Optional, Generics, Multithreading)), SOLID principles and design patterns (Factory, Singleton) to optimize microservices performance with indexing, query tuning and partitioning.
- Automated and monitored ETL workflows using AWS Lambda and AWS Glue, ensuring efficient data aggregation into Oracle and Snowflake for real-time analytics and reporting, with failure recovery and 24/7 processing.
- Leveraged Elasticsearch as a data ingestion point and Redis for caching, optimizing data access, search, and indexing within microservices.
- Implemented multi-threaded polling service which polls for customer data, publishing to a Kafka topic for downstream processing, handling large data volumes effectively.
- Migrated data processing workflows to Snowflake, leveraging S3 for storage, Snowpipe for automated ingestion and Integrated Java APIs, reducing support and development costs by 25%.
- Optimized SQL queries and resolved data quality issues during migration to Snowflake, improving query performance by 97%. Developed Snowflake materialized views to enhance data integration and visualization.
- Resolved Aggregation Job failures by analyzing data anomalies and correcting misconfigured process flags, collaborating with BAs to ensure data integrity and minimize pipeline downtime.
- Secured APIs with OpenID, OAuth 2.0, JWT and Spring Security, integrated Ping Federate for SSO and implemented CyberArk for secure password management during migration to OpenShift, replacing XML configurations

- Developed interactive financial dashboards using React, Redux and TypeScript, integrating with Java, Spring Boot backend APIs to visualize high-volume event data for business insights.
- Optimized React dashboard performance through code splitting, lazy loading, and React Query, while developing reusable component libraries with styled-components and Material-UI for consistent design and responsive layouts.
- Implemented Kubernetes for orchestrating Docker containers, while automating deployments with Jenkins, reducing deployment time by 40% and achieving a 15% improvement in runtime performance.
- Developed unit tests with JUnit and Mockito, integration tests with Postman. Executed troubleshooting with Splunk to diagnose and fix performance issues in microservices.
- Conducted code reviews, mentored junior developers, and collaborated with Architects, Manager, Business Analysts and cross-functional teams to ensure effective backend functionality and data integration.
- Explored the integration of Generative AI tools and AI-driven chatbots to enhance data processing workflows, automate analytics and reporting, and improve user interactions.

Cigna, Full Stack Java Developer

01/2022 – 01/2023 | Morristown, NJ

- Developed microservices using Java, Spring Boot and AWS Lambda to process and transform data from S3, designing secure RESTful APIs, orchestrating workflows with AWS Step Functions, managing data flow securely through IAM roles.
- Implemented real-time data processing with Apache Kafka and Apache Spark (using PySpark for Python-based processing), integrating with Java microservices, ensuring reliable communication between components.
- Enhanced system performance by 25% through query optimization, database tuning, and refining Spring Boot configurations, reducing average response time and improving system efficiency.
- Resolved data inconsistencies by implementing Redis caching, reducing query times by 30% and improving data accuracy across distributed services.
- Managed relational databases (RDS, MySQL) and NoSQL databases (DynamoDB) to support microservices, ensuring efficient data storage, retrieval and scalability across applications.
- Designed responsive single-page applications (SPAs) using React, Redux and TypeScript, implementing dynamic routing and optimizing navigation for enhanced user interactions.
- Developed reusable Angular components for admin dashboards, implementing custom UI elements with Angular Directives, Pipes, and Dynamic Components to enhance modularity.
- Refactored existing Angular components, optimizing performance using RxJS for real-time updates and lazy loading to improve dashboard responsiveness.
- Automated infrastructure management with Terraform, creating and maintaining cloud resources for microservices, ensuring scalability, consistency and streamlined deployment across environments.
- Implemented AWS solutions (Elastic Load Balancing, Auto Scaling, EC2, S3, RDS, Lambda) to enhance scalability, reliability and performance, reducing infrastructure costs and improving application uptime.
- Created and managed containerized services with Docker, deployed on AWS Fargate, and optimized CI/CD pipelines using Jenkins and GitHub Actions for streamlined deployments and minimal downtime.
- Automated workflows using CloudFormation templates to ensure compliance, standardize SNS, SQS and S3 resources, and enforce IAM permissions.

Lenovo, Full Stack Developer

08/2021 – 01/2022 | Morrisville, NC

- Developed and optimized backend services using Java, focusing on OOP, multithreading, exception handling and implementing Spring Data JPA for effective database management.
- Enhanced communication and data efficiency by migrating REST APIs to GraphQL, reducing network overhead and improving response times.
- Integrated Spring JMS and Spring Batch for data processing, improving reliability and efficiency, and developed automation tests in Java for RESTful services, reducing error rates by 15%.
- Refactored backend modules for optimized data transformation, reducing code complexity by 25%.
- Designed and built responsive single-page applications (SPAs) using React, Redux, HTML, CSS and Bootstrap, optimizing page load times and implementing reusable components for maintainable front-end code.
- Enhanced React interfaces using useState, useEffect, Context API for efficient state management. Implemented Material-UI, react-google-charts for large datasets, improving maintainability, data visualization with custom hooks.
- Implemented Azure Functions for serverless data processing, reducing response times and improving system efficiency by handling asynchronous tasks and background processes.
- Deployed applications on Azure using SQL Server and managed cloud infrastructure using Azure Kubernetes Service (AKS) and Azure CLI, enhancing application scalability and deployment efficiency.

- Configured Azure KeyVault to secure cloud application data and implemented additional services like Storage Accounts and Virtual Networks to improve application performance and reliability.
- Performed data migration using Oracle SQL Developer, ensuring consistency between DAO and Oracle 11g databases.
- Automated API testing workflows using Postman, reducing testing time and improving accuracy.
- Monitored application metrics and performance using Dynatrace, Grafana and Prometheus APM tools to ensure optimal system functionality.

Encora, Java Developer

09/2018 – 07/2021 | Chennai, India

- Gathered business requirements and implemented business logic and designed robust RESTful APIs for data exchange and system interoperability in a microservices architecture.
- Developed Spring Boot microservices using Spring Core, Spring AOP, Spring MVC, Spring Batch, Spring IOC and Spring Security, utilizing Maven for build automation in IntelliJ.
- Implemented DAO layer using Hibernate to access the MongoDB database, optimizing database interactions for improved database efficiency and performance.
- Built and maintained serverless backend services using Node.js and AWS Lambda, focusing on event-driven data processing and low-latency operations.
- Integrated frontend with MongoDB database using Mongoose ODM, ensuring smooth data exchange and compatibility between frontend and backend systems.
- Deployed microservices in Docker containers on AWS EC2, streamlining resource utilization and improving scalability for enhanced system performance.
- Implemented dynamic routing and lazy loading with Angular Router, optimizing navigation and reducing initial load times by 15%.
- Developed interactive dashboards using Highcharts and Angular Services, to interact with large datasets and generate real-time reports.
- Automated builds and deployments using Jenkins, ensuring consistent application updates across environments.
- Conducted functional testing using Selenium & Cucumber, executed unit test cases using JUnit & Mockito.
- Prepared detailed technical design documents with UML diagrams to communicate system architecture and design specifications to team members and stakeholders.

Axis Bank Ltd, Java Developer

07/2016 – 09/2018 | Chennai, India

- Developed Java Servlets for handling HTTP requests and responses, enabling efficient server-side processing and dynamic content generation.
- Applied Model-View-Controller (MVC) architecture, using JSP for the view layer to render dynamic HTML, Servlets for controller logic, and JDBC for data access.
- Integrated JDBC for direct database interactions, handling CRUD operations and Hibernate for advanced ORM-based data persistence and interaction, streamlining database operations and improving maintainability.
- Enhanced the UI components using jQuery for specific tasks like interactive modals, dynamic form validation, and AJAX-based real-time updates.
- Utilized jQuery AJAX calls for asynchronous data fetching from Servlets, reducing page reloads and improving user experience in legacy UI sections.
- Developed dynamic, responsive front-end with AngularJS, including two-way data binding and asynchronous data fetching via RESTful API interactions, enabling real-time updates and dynamic form handling.
- Implemented AngularJS controllers to synchronize user inputs with backend services, improving form handling and responsiveness in financial workflows.
- Developed AWS Lambda functions for serverless computing, leveraging AWS Elastic Beanstalk to deploy Servlet-based applications in the cloud, improving scalability and management.
- Utilized Apache Camel Routes for seamless data transfer and integration between different system endpoints.
- Implemented logging with Log4j for enhanced application monitoring and debugging.
- Conducted unit testing JUnit and Mockito to unit test Servlet logic by mocking HTTP requests and responses for efficient validation of request handling and business logic.

EDUCATION

Masters in Computer Science, University of Central Missouri
