

HIGHLIGHTS

- 7.6 years of expertise in the Software Development Life Cycle (SDLC), Agile methodologies, and Jira, with a strong background in PL/SQL development, database administration, performance tuning, and IT support.
- Adept at data aggregation and analysis, transforming raw data from multiple sources into actionable insights to support effective decision-making.
- Proven ability to collaborate with cross-functional teams, drive process improvements, and deliver strategic business reviews to senior management.
- Proficient in writing and optimizing PL/SQL procedures, packages, cursors, and triggers for high-performance database operations and complex SQL queries.
- Strong knowledge of performance optimization, bug fixes, and troubleshooting production issues to enhance database efficiency.
- Expertise in SQL query tuning using Hints, SQL*Plus AutoTrace, and EXPLAIN PLAN for optimized execution.
- Skilled in designing and developing transactional database schemas to support scalable business operations.
- Experience in data modeling, ensuring scalability and flexibility to align with future business needs.
- Hands-on experience with Oracle built-in packages such as SQL*Loader, Import/Export, UTL_FILE, DBMS_XMLGEN, DBMS_XMLQUERY, and DBMS_PIPE.
- Proficient in regular expressions, analytical Oracle functions, and materialized views for complex data processing.
- Extensive experience with performance-enhancing tools, including PL/SQL collections, bulk collect, result set caching, and function result cache.
- Strong ability to partner with cross-functional teams to design and implement KPI-driven solutions
- Actively participated in continuous improvement initiatives within support teams to enhance operational efficiency.
- Engaged with internal client teams to gather business requirements and provide tailored database solutions.
- Experienced in PL/SQL unit testing frameworks for validating PL/SQL packages, functions, and procedures. with Oracle database administration, including installation, tablespace and data file management, backup and recovery, security, user roles, Oracle Scheduler, and database connections.
- Proficient in developing UNIX shell scripts (Bash, Csh, and Perl) for process automation and system management.
- Hands-on experience in client interactions to gather requirements and understand business processes.
- Hands on experience in ETL data pipelines using Spark/PySpark, Spark Structured Streaming, Kafka, Databricks, and Delta Lake for batch and near real-time data processing.
- Responsible for managing the hardware and software infrastructure supporting OLTP systems, including servers, networks, and operating systems.
- Experienced in OLTP and OLAP systems, ensuring efficient data processing and storage solutions.

- Managed OLTP database infrastructure, focusing on performance tuning, backup and recovery, security, and disaster recovery planning.
- Spearheaded initiatives to improve supply chain system integration, focusing on streamlining data flow, optimizing inventory management, and enhancing supplier relationship management.
- Experienced in working with X12 formats, particularly 837 file formats, to integrate healthcare claims data into operational systems.
- Led the development and implementation of processes for insurance claims operations, focusing on outbound encounter submissions, ensuring compliance with industry standards, and minimizing claim rejections and EDI process.

VISA STATUS

- F1- OPT EAD

PROGRAMMING SKILLS

- **Programming Languages:** Python, C++, Unix Shell Scripting, Unify VISION ACCELL
- **Web Technologies::** HTML, CSS, Bootstrapping, Java Script
- **Software/Tools:** Power BI, Visual Studios, Jupyter, Secure CRT, Toad, SQLPLUS, PostgreSQL ,SQL Developer, Tableau, Snowflake, Azure Data Factory, Azure Data Bricks,
- **Database Technologies:** Oracle SQL/PLSQL, MySQL, Control M, Service Now, Oracle OLAP
- **Operating System:** Windows, Linux
- **Repository:** Git, Azure Dev Ops

EDUCATION

- **University of North Texas** Denton, TX
Master of Science in Computer Science; GPA: 3.33 Aug. 2021 – Dec. 2022
- **Jawaharlal Nehru Technological University** Hyderabad, India
Bachelor of Engineering in Computer Science; GPA: 3.4 (7.0/10.0) Aug. 2011 – June. 2015

EXPERIENCE

- **Apple INC - Supply Chain Integration** Austin, Texas, USA
PL/SQL Developer Feb 2023 - Till date
 - Designed, developed, and maintained scalable, automated, and user-friendly systems, reports, and dashboards to support business needs.
 - Partnered with operations and business teams to consult, develop, and implement KPIs, automated reporting solutions, and process improvements.
 - Enabled effective decision-making by retrieving and aggregating data from multiple sources, compiling it into digestible and actionable formats.
 - Participated in strategic and tactical planning discussions, preparing and delivering business reviews to senior management regarding progress and roadblocks.
 - Provided data management processes such as accessing raw data feeds, building queries and macros, writing VBA code, and organizing data to present business performance visually.
 - Generated complex queries to dive deep into process issues, retrieving and analyzing large datasets using Excel and SQL.
 - Took ownership of reporting processes to ensure accuracy and timeliness, resolving data discrepancies with a high degree of customer focus.
 - Built and managed KPIs to measure, control, and benchmark reporting processes, monitoring existing metrics and creating new ones to identify system improvement opportunities.

- Supported cross-functional teams on day-to-day execution of existing program implementation, ensuring smooth operation.
- Innovated to improve customer experience by defining hypotheses, designing experiments, implementing them, and analyzing results.
- Developing and optimizing PL/SQL code for data manipulation, validation, and reporting.
- Managed and maintained Oracle databases, ensuring high availability and data consistency.
- Writing complex SQL queries which are optimized for fast execution and performance.
- Designed, developed, and debugged PL/SQL packages, procedures, and triggers for critical data processing tasks.
- Expertly diagnosed and resolved intricate performance bottlenecks, reducing query execution time by maximum time.
- Collaborated with cross-functional teams to understand business requirements and translate them into efficient database solutions.
- Implemented and documented debugging procedures and best practices for the team.
- Planned and coordinating security measures to ensure data integrity and maximize database efficiency
-

Capgemini Technology Services India Ltd

Hyderabad, India

SQL Developer -CNA Insurance Senator Applications

Oct 2017 - Aug 2021

- * Involved in PLSQL development like the creation of packages, procedures, functions, performance tuning, views, triggers, and indexes.
- * Involved in integration flow from backend to front in senator applications.
- * Supported total functionality of Senator US, Senator UK, Senator CNA-RE, Canada GRM and Underwriter applications.
- * Handle requirement collecting, problem fixing, testing, documentation, and implementation as per the quarterly release or in accordance with the business need/approvals.
- * Perform requirement gathering, bug fixing, testing, documentation, and implementation as per quarterly releases or based on the business need/approvals.
- * Performed the deployment changes in pre-prod and deployed in production as part of weekend activity.
- * Create/modify/Test the code, forms, and scripts that allow claims portfolio applications to run.
- * Design, analyze, review, and redesign programs using workflow charts or diagrams.
- * Identify opportunities to automate/upgrade systems to avoid manual intervention and improve the claims system's productivity and performance.
- * Expertise in writing procedures for claim section under property and casualty insurance.
- * Worked with Upstream(Users) and downstream(TAP/Accounting) team for Senator related apps for data flow and Streamlined workflows to reduce errors in the claims submission process, ensuring faster reimbursement cycles.
- * Maintained ETL processes(upstream) to populate a data warehouse for OLAP analysis.
- * Responsible for client related incidents through service now and quickly resolved them on SLA priority
- * Performed and responsible for maintaining the Client application during closing process.
- * Expertise in writing unix shell scripting for batch jobs.
- * Designed and developed database schemas for OLTP systems using Oracle Database 11g.
- * Managed Oracle Database 12c infrastructure for OLAP and OLTP systems, ensuring high availability and fast response times.
- * Expertise on performancing tuning and query optimization.
- * Created batch jobs for daily data flow from upstream to Senator application and application to downstream in unix.

- * Implemented OLTP database schemas to support order processing claims applications.
- * Designed and maintained the transactional database schema and objects, including tables, indexes, and views.
- * Performed Month end close activities and supported all Senator application support activities during weekend.
- * working knowledge on vision and accel for senator apps.
- * Worked on creation of closing module in Senator canada application and solved account ledger differences during the month end close activities for Senator UK applications.
- * Worked closely with end-users to identify and prioritize system requirements, providing production support and ensuring seamless implementation.
- * Conducted in-depth analysis and root cause assessments of claims data discrepancies, implementing corrective actions to improve data accuracy and compliance with insurance regulations.

○

IGATE

Data Analyst/Sql Developer

Hyderabad, India

Oct 2015 - Sept 2017

Client : Discover Financial Services -Application Management Systems Discover Financial Services
 -Discover Financial Services is an American financial services company which issues the Discover Card, Bank and operates the Pulse network. Discover card is the 3rd largest credit card brand in United States. In addition to its card products, Discover also markets saving products, home loans and student loans.
 Application Management System : AMS is a production support in which multiple team with multiple technical skill like UNIX,

Responsibilities:

- * Designing technical solution, use cases, class diagrams, sequence diagrams, system flow diagrams as part of internal specification documents for the assigned module.
- * Responsible for implementing the Technical Design Document which provides all information towards coding developments and new enhancements..
- * Analyzing the functionalities of application and providing defect free environment
- * Supported Discover Bank application by performing regular health check and monitoring logs
- * Analyzing user reported issues and giving better solution within SLA with prepared analysis document
- * Provided solution to incidents by debugging the code in backend.
- * Validating multiple changes post daily code Fix/minor updating by performing validations on each and every functionality keeping in view the application and respective services.
- * Helping/notifying different teams by providing necessary details during RRT's when any of bank functionality/service was down temporarily.
- * Quick response with the client requirement and produces reports on defect/problem reporting data.
- * Knowledge transfer with the fresher and also supervise them. during RRT's when any of bank functionality/service was down temporarily.
- * Provided technical support for database-related issues to the development and administration team.
- * Managed Oracle Database 12c infrastructure for OLAP and OLTP systems.

PROJECTS

- **Maze Runner — C++ programming language:** Designed and built a maze runner in visual studio to reach the destination in the shortest path using C++ programming. Users can modify the grid before starting the maze and can see how the maze is moving in each step. The stack used by the computer will help us remember which moves we have made.
- **Agent moving in real-world environment — Python:** This project includes concepts of performance measurement, environment interaction, and the use of actuators (PEAS) to assist the agent's navigation in a stochastic setting that mimics a real-world environment. Designed and built to understand the working of a simple, table-driven agent using Python

- **Tic-Tac-Toe — Python:** Designed and built a project to demonstrate the understanding of the alpha-beta search algorithm we implemented the following game Tic-Tac-Toe using Python
- **Chat Bot — Java:** We've created a chatbot using the same with a twitch as an online platform that provides a chatbot platform to the online clients using Java.
