+1-(725)772-9154

PROFILE SUMMARY:

- **Experienced Backend Developer** with **10 years** of expertise in **server-side programming, database management, and API development**. Skilled in **Java, Spring, Spring Boot, Microservices and SQL** with a strong focus on optimizing performance and scalability.
- **Proficient in Agile methodologies and version control systems**, ensuring efficient software development cycles and seamless team collaboration.
- **Diverse Industry Experience** across **Telecom, Banking, OTT, Automation, and Cloud Management**, contributing to a deep understanding of domain-specific challenges and solutions.
- **Customer Obsession**: Proven experience working with **Fortune 500 clients** such as Google, AT&T, HBO Max demonstrating an unwavering commitment to understanding customer needs, anticipating challenges, and delivering impactful, results-driven solutions. Adept at fostering strong client relationships and **adapting seamlessly** to diverse corporate environments to drive business success.
- **Leadership & Team Management**: Successfully **led and managed teams of 10+ engineers**, overseeing project execution, goal setting, and performance evaluations.
- **Mentorship & Training**: Passionate about **mentoring and training**, having successfully guided multiple batches of interns and engineers, fostering a culture of continuous learning and skill development.
- **Recognized Achievements**: Awarded **Best Contributor of the Year (2023), Best Mentor of the Year (2023, Interns), and Best Mentor of the Year (2024, Engineering)**, showcasing commitment to excellence in both technical and leadership domains.

TECHNICAL SKILLS:

Programming Skills: Java, Python, Go, Angular, Javascript

Framework: Hibernate, Spring, Spring webFlux, Microservices, Flask, Apache Wicket, WebObjects, Juice, Kafka, Docker, Kubernetes

Databases: Oracle DB, MYSQL, PostgreSQL

Version control: Git, SVN

Development Tools: Eclipse, IntelliJ, STS

Build Tools: Ant, Maven

Others: JUnit, Mockito, Jira, Sonar, Selenium, Tomcat, WebLogic, Reactive programming

Certifications: GCP Cloud Leader, AWS Developer Associate certificate

PROFESSIONAL EXPERIENCE:

Credit One Bank: Software Engineer 3

Apr 2025 to Present

Project: ECMS, ORION

ECMS is an application used to store documents, videos in the cloud. Orion is the application used to manage internal approval processes

Responsibility:

- Working on enhancing the application to support storing documents in S3 buckets as chunks.
- Added the functionality to store videos.
- Worked on integrating kafka to send the metadata of stored videos
- Developed Ephemeral application which can be used for short time token
- Worked on adding LeanIX, GitLab integrations in Orion

Technology Stack: Java 17, Springboot, Spring data R2dbc, Spring webflux, Kafka, AWS, Docker, Kubernetes, Hazelcast

Grid Dynamics Pvt. Ltd: Senior Software Engineer

Nov 2022 to Mar 2025

Project: Google Flex Project

In Google, Flex project is responsible for cloud resource management for Google cloud service.

Responsibility:

- Lead a team of 8 engineers as part of Google Flex project. Responsible for designing, developing RPC's, testing and documenting the requirements for Google's Syncers project.
- Migrated the entire code from Dremel to F1 engine.
- Developed multiple schedulers and executors to read data and transform it according to the requirements.
- Developed a web crawler using Python which scraps the required data and pushes it to excel sheet.
- Enhanced Syncer architecture for schedulers to improve the performance by creating multiple RPC's and adding the implementation in it.
- Added monitoring functionality on schedulers using Monarch service and Streamz library through which we can check the health of the schedulers.
- Involved in conducting Hackathons in the company.

Technology Stack: Java, Python, Go, F1 Query, GoogleSQL, Spanner, Google Juice, RPC, Protobuf, Mockito.

Sunera Technologies Pvt. Ltd: Technical Lead

Jun 2021 to Nov 2022

Product: Cloudtestr

Cloudtestr is a script-less automation product enabling continuous automated release validation and testing using in-built test libraries..

Responsibility:

- Led a team of 7 engineers, overseeing design, development, and enhancements of Cloudtestr.

- Involved in client calls and deployments.
- Gave demos to clients on enhanced requirements.
- Implemented new features to test MongoDB queries.
- Implemented additional features to test Patch and Head requests in addition to other requests.

Technology Stack: Java 8, Spring, Spring boot, Microservices MySQL, Hibernate, AWS, Lambda, Docker, Kubernetes

Evergent Technologies Pvt Ltd: Software Developer

Apr 2018 to June 2021

Project: ATT

Evergent's enterprise-class software enables companies across the digital media value chain to track and collect payments from subscribers and distribute royalties to OTT service providers.

Responsibility:

- Worked on user flow from account creation to subscription/cancellation.
- Worked on migrating from one business unit to another unit as per customer requirements.
- Worked on creating test cases for the newly developed features.

Technology Stack: Java, Angular, Toad, SQL, REST API, JUnit, Jira, Kafka

Virtusa Consulting Services: Engineer Technology

Aug 2015 to Apr 2018

Project: Capman

Capman project involves developing and maintaining a comprehensive system for managing Supplier Product details of BT telecom.

Responsibilities:

- Developed modules including Network Info, Capacity Check, Supplier Capability, and Admin.
- Worked on code upgradation of the entire application.
- Worked on XML parsing to get router and port details from upward components.
- Worked on standalone job managers to get details related to supplier products, access combinations.

Technology Stack: Core Java, Apache Wicket, HTML, CSS, JavaScript, JSF, JDBC, Hibernate, Oracle10g, Spring, Spring MVC, Spring Boot, SOAP, AJAX

PROFESSIONAL QUALIFICATION:

- **Bachelor of Electrical and Electronics Engineering** from National Institute of Technology Calicut, India in May 2015.
