

BHIKSHALU R BUTHUKURI

Sr. Full Stack Lead Java Engineer

bhikshalureddybuthukuri@gmail.com

Cell: (609) 662-6190 | [LinkedIn](#)

ORACLE®

Certified Professional

Java Programmer

PROFESSIONAL SNAPSHOT

- Around **10+ years** of proven experience as a **Full Stack Java Developer**, having **solid hands-on experience** in **designing, architecting**, developing, and maintaining **N-Tier Service Oriented, Cloud-based, Web services**, Standalone & Client/Server based **enterprise applications** using **Java/J2EE** and **Object-Oriented Client-Server** technologies.
- Astute **strategic understanding of architectural design patterns** such as MVC, Singleton, Factory, Decorator, Observer, and JEE Design Patterns such as **Classical Four Layer Architecture** (Web Service, Business Service, DAO, and Utilities), **Onion Architecture, Microservices Architecture**, etc.
- Extensive experience **spanning variable lines of business** with adept knowledge & proven experience in **Spring MVC, Hibernate, Java Microservices, AWS Cloud, Struts2/Struts, MEAN Stack and Angular**.
- **Implemented REST Micro services** using **Spring Boot**. Generated Metrics with method-level granularity and persistence using **Spring AOP** and **Spring Actuator**.
- Experience in **using various spring modules** such as Spring MVC, Spring Batch, Spring DAO/ORM, Spring Transaction handling, Spring AOP, Spring Boot, Spring JMS, and Spring Context.
- Expertise in developing and **deploying enterprise Java Beans on Application servers like Tomcat, IBM WebSphere, and JBoss**.
- **Ambitious go-getter** with extensive adeptness in **web application development** using JDBC, Servlets, JSP, JSTL, **Java Beans, MVC, Struts, FRY OCP, Tiles, EJB, JNDI, JMS, SOA, SOAP, Spring, Hibernate, Web services, JavaScript, AJAX, Rest and JSON, DOM/SAX/XSLT/XPATH/SCHEMA** and HTML
- Experience **creating Typescript reusable components** and services to **consume REST APIs** using **Component-based architecture** provided by **Angular2, Angular 8/9**.
- Hands on demonstrated experience with using **Angular2, Angular 8/9 for developing applications, custom components, services, directives and routing**, and testing which meets the requirements of business model.
- Designed, Developed, and **Implemented the J2EE Micro services on AWS EKS** using the **Kubernetes, Docker CE and Jenkins CI pipeline**.
- Experience in the **design, investigation**, and implementation of **public-facing websites** on Amazon Web Services (AWS) and **AWS management console**.
- Strong knowledge in **AWS, PCF and GCP cloud platforms** with hands on experience in AWS Services like **EC2, S3, RDS, VPC, EBS, ELB, SNS, SQS, Auto - Scaling, IAM, Route53, Cloud Watch, Ops Work, Elastic Beanstalk, ECS, Cloud Formation and Lambda**.
- Worked on **container management using Docker** by writing Docker files and set up the automated build on Docker HUB besides performing **installation and configuration of Kubernetes**.
- Containerized all the **Ticketing related applications – Spring Boot Java and Node.js** applications using Docker.
- **Migrated Database from SQL Databases** (Oracle & SQL Server) to **NO SQL Databases** (Cassandra/MONGODB).
- Experience in upgrading and **migrating various versions of Mongo database** on different platforms and **provide solutions related to the migration to MongoDB**.
- **Provided UI/UX services** including interpreting requirements, **creating concept designs, create user flows, create wireframes, prototypes**, and visual specs, related UX standards.
- **Expert level problem-solving analytical skills**, with the ability to troubleshoot and **resolve complex technical issues** related to application development/deployment and performance.
- Proven **ability to work in a fast-paced, dynamic, and innovative environment**, with a strong sense of ownership and accountability for delivering high-quality results.

EDUCATION

Bachelor of Technology, Computer Science Engineering, K L University, India – 2010 to 2014

CERTIFICATIONS

Oracle Certified Java Programmer (OCJP) – From Oracle ([Authentication details here](#))

TECHNICAL SKILLS:

Programming Languages:	Java 8-11(J2EE, JDBC, JSP, Collections), SQL, PL/SQL, Python
Architectural Pattern:	Microservices, Web Services, Client-server, MVC
Web Technologies:	React, Angular, HTML, JavaScript, Ajax, CSS, jQuery
Microservices Framework:	Restful Web Services, SOAP, Eureka Server, Splunk, Docker
Frameworks/Libraries:	Spring Boot, Spring MVC
Databases:	Oracle, MySQL/ Hibernate, JPA, NoSQL-MongoDB, DynamoDB
Cloud Platforms:	Azure, AWS
Protocols:	HTTP, HTTPS, TCP
Web/Application Servers:	Apache Tomcat, IBM WebSphere Application Server, JBoss
Operating Systems:	RHEL, Ubuntu/Debian/Fedora, Sun Solaris, Windows
Methodologies:	Agile, UML Waterfall, Iterative
Additional Tools/Services	SVN, RTC, Bit Bucket, GitHub, Jenkins, Jira, Sublime Text, Jasmine, Karma, SonarQube, Selenium, Manual Testing, ECS, Fargate, EC2, S3, CloudWatch, RDS

PROJECT EXPERIENCE

American Express – Phoenix, AZ
Full Stack Lead Java Developer

May 2024 to Till Date

I was hired by American Express to help execute one of their projects on a critical path for next gen upgrade. Interactive voice response (IVR) is a technology that allows Amex card holders to interact with a computer-operated telephone system. Leveraging IVR allows Amex card holders to interact with agents via a telephone keypad or by speech recognition after which services can be inquired about through the IVR dialogue. If an Amex card holder would like to enroll his voice for authentication purposes, the same user can enroll his voice for fetching the card details like Available balance Based on the voice recognition.

Responsibilities:

- Used SOAP UI tool to test SOA based architecture applications to test SOAP services and REST API.
- Implemented G-RPC protocol for the communication of the Microservices
- Secured the API's by implementing OAuth2 token-based authentication/authorization scheme using spring security.
- Developed Micro services & APIs using Spring Boot and Used Kafka cluster as messaging system between the APIs and Micro services.
- Monitoring Production environment through logs by using Splunk.
- Implemented Micro Services based Cloud Architecture using Spring Boot.
- Implemented Asynchronous messaging between components using KAFKA
- Developed REST service documentation using Swagger UI and developed test cases using Junit, Mockito framework.
- Used Spring Data Framework to use the features of Spring JDBC and Spring ORM classes like JDBC Template and Hibernate Template to perform the database operations like Oracle, MongoDB by connecting to Data source.
- Experience on AWS Deploying, managing and operating scalable, highly available, and fault tolerant systems and managed continuous delivery systems and methodologies on AWS.
- Used multithreading in programming to improve overall performance using Singleton design pattern in Hibernate Utility class.

- Involved in creating various Data Access Objects (DAO) for addition, modification and deletion of records using various specification files.
- Utilized Java 1.8/11 features like Lambda expressions for collection evaluation and comparing the data, Stream API for Bulk data operations on Collections which would increase the performance of the Application, Parallel operations on collections.
- Developed the CI/CD pipeline script for continuous development and integration support for all the environments. (Dev, QA, Prod)
- Involved in installing and configuring Maven for application builds and deployment
- Implemented Redis Cache for storing Audio details
- Used Git to maintain the version of the files and took the responsibility to do the code merges from branch to master and creating new branch when new feature implementation starts and IntelliJ as IDE.

Environment: Spring Boot, Gradle, Maven, Angular JS, React JS, Node JS, SOAP, Redux, REST, TOAD, JSP, CSS3, HTML, jQuery, XML, JSON, DynamoDB, Oracle 12c, IntelliJ IDEA, JUnit 4.13, Postman, REST, SVN, Jenkins, Mockito, AWS, Docker, Kubernetes, log4j, OAuth 2.0, Apache Kafka, Selenium, Selenide, Terraform.

Accenture – Hyderabad, India
Full Stack Lead Java Developer

May 2022 to May 2024

I facilitated many Systems implementations as a Technical Lead end-to-end collaborating with many business stakeholders where I developed scalable applications & web frameworks for HP's clients that enabled operational excellence. I was hired as part of a digital integration hub project to help integrate data collected from multiple source systems into downstream by processing them using the newest db. specific technologies like Kafka, Mongo DB.

Responsibilities:

- Designed and Developed Automation Framework in Selenium WebDriver using behavior driven approach like Cucumber BDD.
- Configured Selenium WebDriver, JUnit and Maven tools and developed Selenium Automation scripts in JAVA.
- Used SOAP UI tool to test SOA based architecture applications to test SOAP services and REST API.
- Designed Cucumber framework for web/service-virtualization; perform manual and Cucumber testing of a web-based application, SOA Testing, Validation and Virtualization, Extended Web Services Tests in a Low - impact way using CA LISA.
- Done the design, development and testing phases of Software Development using AGILE methodology and Test-Driven Development (TDD).
- Built production web applications using Agile methodologies and modern technologies like React/Redux, Node.js/Express, ES6, and SQL/NOSQL ORM's.
- Designed, configured and managed public/ private cloud infrastructures using Amazon Web Services (AWS), which includes VPC, EC2, S3, CloudFront, CloudWatch, ELB and Elastic Beanstalk.
- Worked on AWS Lambda for event driven workflow, worked on Databases, Creating and Hosting micro services on EC2 instances, and automating things using JSON Scripts, Creating End-Points for the services, integrating through API's, involved in creation of APIs and API Gateways by establishing Secure connection between the end-points.
- Involved in developing the UI, layout and front-end programming for web application that matches requirements of the client and developed UI Layer for the application using HTML5, CSS3 and KENDO UI.
- Developed reusable components and employed state management libraries (Redux) to streamline UI development and enhance maintainability.
- Designed and implemented RESTful endpoints, adhering to RESTful principles for resource modeling, URI design, and HTTP methods.
- As a consumer, integrated external services and data sources through RESTful APIs, promoting modularity and flexibility in the application architecture.
- Employed Jenkins as a robust Continuous Integration and Continuous Delivery (CI/CD) pipeline to automate the software development lifecycle.
- Configured the web.xml file for REST server injection to enable the REST web services by using JAXB API.

- Wrote several custom JSP-tablet classes used to modularize and stream line web page architecture.
- Automated builds, testing, and deployment processes, significantly reducing manual intervention and accelerating time-to-market.
- Integrated Jenkins with version control systems and deployment targets, enabling seamless code integration and deployment to various environments.
- Designed and implemented applications using Spring Boot, Gradle, SOL, Maven, IMS, Oracle, WebLogic, Tomcat.
- Used XML Web Services using SOAP to transfer the amount to transfer applications that are remote and global to different financial institutions.
- Did server-side scripting using Node.js to develop the applications, which are data intensive real time applications that run on distributed devices.
- Developed Spring Boot Restful services to retrieve the collection of historical data in the JSON format from the database and send an HTTP response to the web tier.
- Strong Splunk UI experience and ability to debug expensive search queries.
- Extensive experience in deploying, configuring, and administering Splunk clusters.
- Deployed Spring Boot-based Micro Services Docker Container using Amazon EC2 container services and using AWS admin console.
- Designed and developed the REST-based Microservices using Spring Boot, and Spring Data with JPA and deployed Microservices onto Docker.
- Developed Docker images and containers for the application by configuring Docker files, using Docker Compose to manage images.
- Involved in the development of REST Web Services using Spring MVC to extract client-related data from databases and implementing the Microservices based on RESTful API utilizing Spring Boot with Spring MVC and tested Rest APIs in Spring-Controller at the backend for JSON data.
- Implemented MVC architecture using JSP, spring, and used Spring Framework to initialize managed beans and services.
- Involved in Agile delivery of software using practices of short iterations, sprints, and Scrum.
- Worked with the production support team and Ops in debugging and fixing various production issues.

Environment: Spring Boot, Gradle, Maven, Angular JS, React JS, Node JS, SOAP, Redux, REST, TOAD, JSP, CSS3, HTML, jQuery, XML, JSON, DynamoDB, Oracle 12c, IntelliJ IDEA, JUnit 4.13, Postman, REST, SVN, Jenkins, Mockito, AWS, Docker, Kubernetes, log4j, OAuth 2.0, Apache Kafka, Selenium, Selenide, Terraform.

Wipro Limited – Hyderabad, India **Full Stack Application Lead**

July 2021 to May 2022

I was hired by Wipro to help deliver an implementation for their longstanding client Bank of America (BOA) in North America. Bank of America provides banking services to its customers in North America with transactions happening around the world 24/7. This is a project to build an automated application to identify and/or notify any/all fraud transactions. The main deliverable of this project is to have a mechanism to identify the fraud transactions which are happening on daily basis and provide insights to the Risk Mitigation team who will use the system to filter/alert out suspicious transactions thus enabling the recovery of the money from these fraud activities. Project is rolled out as a global platform via On-Prem and Cloud implementations based on Data Policies of respective countries.

Responsibilities:

- Conducted code reviews, ensuring adherence to coding standards, best practices, and quality guidelines and facilitated coding sessions and workshops to promote effective use and adoption of best practices.
- Created the Node.js EXPRESS Server combined with Socket.io to build MVC framework from front-end side AngularJS to back-end MongoDB to provide broad cast Services as well as chatting services.
- Used HTML5, CSS3 and Bootstrap for layout design, navigation, animation buttons and icons and developed the application as Responsive Web Application using CSS media queries and Bootstrap.
- Developed the application as Single Page Application which can switch to different components using AngularJS/react.js also worked on Angular JS controllers and created functions factory to interact with the RESTful Services using AJAX services like \$http and \$resource and swagger.

- Developed Custom Directives using Angular JS for Data Grid and Pagination & created Custom factories and Services using Angular for refactoring Code reuse.
- Implemented Spring Boot with Microservices to divide the application into various sub-modules.
- Developed various screens for the front end using React JS and used various predefined components from NPM (Node Package Manager) and redux library. Implemented Angular 2 services to connect the web application to back-end APIs to POST/GET the data used in the application.
- Functionality is implemented by developing RESTful web services using spring boot, JPA, Pivotal Cloud foundry (PCF) and Oracle Responsibilities.
- Implemented Spring MVC framework in the application. Involved in developing code for obtaining bean references in spring framework using Dependency Injection (DI) or Inversion of Control (IOC).
- Involved in up gradation and maintenance of company's website to the new layout using the Grid orientation model Bootstrap framework.
- Used several Java 8 concepts like Stream API, Time API, Collection API, and lambda expressions to migrate the existing application.
- Used JAVA 8 features like Functional Interfaces, Lambda Expressions, and Java Stream API for Bulk Data Operations on Collections which would increase the performance of the Application.
- Created Typescript reusable components and services to consume REST APIs using Component-based architecture provided by Angular 9.
- Experience in using Kafka and Kafka brokers to initiate spark context and processing live streaming.
- Developed custom Kafka producer and consumer for different publishing and subscribing to Kafka topics.
- Worked with NoSQL Cassandra to store, retrieve, and update and manage all the details for Ethernet provisioning and customer order tracking.
- Manipulated data using CRUD (Create, Read, Update and Delete) operations of NoSQL (MongoDB) data base management system and handled database access and data transmission based on RESTful web service.
- Developed Object-Relational (O/R) mapping using Hibernate 4 to create high performance persistence layer to interact with various databases using Hibernate Query Language, Criteria APIs, and Native SQL queries.
- Designed and developed the login portal using framework Angular 2 along with HTML5, CSS3 and Type Script.
- Design and implemented a Messaging APIs to send/receive messages, pull messages from third-party messaging providers using Java Spring boot, micro-services and MongoDB Involved in configuring Elastic Search to access database and retrieve data from the database.
- Created Java Mail APIs is used to send notifications about important updates such as claim status change.
- Extensively worked on front end, business, and persistence tiers using the struts frameworks.
- Designed and developed Service layer using Struts framework. Involved in designing and implementation of MVC design pattern using Struts framework for Web-tier
- Improvised the performance of web pages by performing magnification on CSS and JavaScript assets which were configured through Grunt.
- Used GitHub for version control and Karma & configured Maven for dependencies and Log4J for logging.

Environment: Java JDK 1.7 1.8, Struts, HTML5, CSS3, Bootstrap, Java 1.8, JavaScript, jQuery, Angular JS 1.5, Angular 2, Node JS, Express JS, JMS, JSON, NoSQL (MongoDB), RESTful, Spring 4.2, Hibernate 4, Session Bean, XML, Log4j, JUnit, ANT, WebSphere Application.

Infosys – Hyderabad, India
Full Stack Java Developer

Aug 2019 to Jun 2021

Verizon's IEN project implemented by "Infosys" serves to move away from its TDM networking to a more simplified Ethernet-based network. The shift will also give Verizon a single management platform, while also lowering its carbon footprint by using less power and space. Verizon's end goal, is to enable a zero-touch, fully automated, extensible, and programmable infrastructure by using open networking principles and capabilities thus enabling a cleaner more accessible network. I was hired as a Full Stack Java Developer to help deliver this application with tight deadlines using agile methodology.

Responsibilities:

- Developed a web-based application for the sales team, providing insights into portfolio performance via

automated analytical reports using Python, Django, JavaScript, and D3.js.

- Involved in various phases of Software Development Life Cycle (SDLC) of the application like Requirement gathering, Design, Analysis and Code development and understanding of business requirements and implement the process using Agile (Scrum) methodology.
- Created responsive web pages using Bootstrap and wrote client-side application in a clean MVC model using Angular JS.
- Implemented the front-end using HTML 5, CSS3, Bootstrap, jQuery and Angular 4/6.
- Developed RESTful Web Services with JAX-RS using Spring Boot and Micro Services Architecture.
- Implemented the application using Spring IOC, Spring MVC, Spring Boot, Spring Security and Hibernate.
- Used Spring IOC framework for Dependency Injection and Spring AOP for logging purposes.
- Implemented the authentication and authorization of the application using Spring Security and OAuth.
- Migrated existing monolithic application into Cloud environment using Amazon Web Services.
- Used JAVA 8 features like Lambda Expressions, Parallel Streams, and functional interfaces.
- Implemented Core Java concepts like Multithreading, Concurrency, Exception Handling and Collections wherever necessary in the application.
- Spring beans were used for controlling the flow between UI and Hibernate.
- Implemented the application using various design patterns such as Singleton, DAO, Factory and Service Locator.
- Developed Micro-Services based architecture to enable the application to be deployed on AWS.
- Responsible for creating an instance on Amazon EC2 (AWS) and deployed the application on it.
- Worked on AWS services to deploy static websites and dynamic Web Apps on EC2 using Elastic Beanstalk and Elastic Container Service-Docker.
- Implemented a Continuous Delivery pipeline with Docker, Jenkins and GitHub and AWS AMI's.
- Developed Java API to interact with the Amazon SQS used in sending bulk emails.
- Deployed Spring Boot based Micro Services Docker container using Amazon EC2 container services and using AWS admin console.
- Automate the cloud deployments using chef, python (boto & fabric) and AWS Cloud Formation Templates.
- Used Docker to containerize the Services and APIs to run on EC2 instances.
- Implemented build stage-to build the Micro Service and push the Docker Container image to the private Docker registry.
- Used Spring Data Framework to use the features of Spring JDBC and Spring ORM classes like JDBC Template and Hibernate Template to perform the database operations by connecting to Data sources available.
- Performed CRUD operations like Update, Insert and Delete data in Mongo DB.
- Worked on Mongo DB database concepts such as locking, transactions, indexes, Sharding, replication and schema design etc.
- Used Active MQ to communicate with controller and used service layer to implement the business logic.
- Used Mockito for testing the application and Log4j for logging all the debugging and error information.
- Used Maven as build automation tool and responsible for Continuous Integration (CI) and Continuous Delivery (CD) process implementation using Jenkins.
- Used GitHub as Version Control tool, Jira for issue tracking and IntelliJ as IDE.
- Deployed and tested the application on Web Sphere Application Server.

Environment: Java1.8, J2EE, HTML5, CSS3, JavaScript, jQuery, Angular JS, Angular 4/6, Spring IOC, Spring AOP, Spring MVC, Spring Security, Spring Boot, Hibernate, RESTful, SOAP, Hibernate, Mockito, Micro Service Architecture, Amazon Web Services, EC2, SQS, Docker, Active MQ, Oracle, MongoDB, Maven, Jenkins, GitHub, Jira, UNIX and Web Sphere Application Server.

Virtusa Consulting – Hyderabad, India
Full Stack Sr. Java/J2EE Developer

Mar 2016 to Aug 2019

Through Virtusa, I worked as a Senior Java Developer for CITI. Citibank commercial cards issued to businesses to

cover expenses such as travel and entertainment and procurement which includes the multiple payment card brands of purchasing cards, business cards, corporate cards and multi-utility fleet cards. This program is also designed to help them manage their spending and streamline the purchasing process. Commercial cards offer companies advanced functionality, such as the ability to employee spending limits and restrict the usage to specific type of purchases.

Responsibilities:

- Worked on High level and low-level system design, planning, estimation, and implementation.
- Used Spring AOP for solving crosscutting concerns like keeping customer log data and transactions details etc.
- Worked on development and implementation of the MVC Architectural pattern using Spring Framework, Spring Security and AOP.
- Created and injected spring services, spring controllers and DAOs to achieve dependency injection and to wire objects of business classes.
- Used Spring MVC framework at the Web tier level to isolate each layer of the application so that complexity of integration will be reduced, and maintenance will be very easy.
- Implemented Batch jobs to deal with large number of chunks using Spring Batch Framework to execute the similar jobs simultaneously.
- Developed presentation layer using JSP, HTML5, CSS3 and client validation using JavaScript.
- Developed Single page application and structured the JavaScript code using AngularJS.
- Design and develop template-based User Interface using Bootstrap and Angular JS. Handled all the client-side validations, slide show, hide and show controls, dropdown menus and tab navigation using jQuery.
- Maintained Interface compatibility and concurrency in the project using Java 8 new features like default, static methods and Concurrency API
- Implemented and maintained monitoring and alerting of production and corporate servers such as EC2 and storage such as S3 buckets using AWS
- Used Amazon S3 to backup database instances periodically to save snapshots of data
- Utilized Amazon Web Services (AWS) EC2 to deploy Docker containers.
- Create and configured the continuous delivery pipelines for deploying Micro Services and Lambda functions using Jenkins CI server.
- Involved in deploying systems on Amazon Web Services Infrastructure services EC2, S3, RDS, SQS, Cloud Formation.
- Designed and integrated the full-scale Hibernate persistence solution with the application architecture.
- Involved in design and development of the Hibernate Domain Model for the service.
- Involved in using JPA (Java Persistence API) frameworks and APIs as JDO and Hibernate.
- Enterprises Integrated Pattern Implemented with Apache Camel (ESB).
- Developed a RESTful based service for data retrieval to make it independent of the current application.
- Involved on development of RESTful web services using JAX-RS in a Spring based project.
- Worked on JSON for transferring and retrieving data between different applications.
- Worked on Elasticsearch to convert raw data such as log files or message files into internal documents and stored them in a basic data structure like a JSON object
- Wrote services to store and retrieve user data from MongoDB for the application on devices.
- Implemented service methods and SQL queries, PL/SQL to interact with the Oracle DBMS and worked with Cassandra. WebSphere is used as an Application Server to Deploy the Application.
- Experience in using JUnit and build tools such as MAVEN.
- Collaborated with testers and developers and prepared test plans for producing high quality software applications. Created a continuous deliver pipeline and continuous deployment using Bamboo.
- Project maintenance is done in Git, Bitbucket and related documentation in Confluence.
- Worked on Log4j for logging errors, messages, and performance logs.

Environment: Java 1.8, J2EE, HTML5, CSS3, jQuery, Bootstrap, JavaScript, AngularJS, NodeJS, Hibernate, Spring MVC, Spring IOC, Spring Boot, Spring Security, XML, GIT, Bitbucket, Bamboo, JSP, JUnit, Maven, IBM WebSphere, Apache, JAX-RS, Restful, Elastic Search, Amazon Web Services (AWS) EC2, S3, Micro Services, Log4J, Oracle, Mongo DB, WSD and Spring Tool Suite.

I was hired as a Jr. Java Application Developer to help with Vernon's content management portfolio of projects. This specific project is for a health care client where I developed a web-based application where all the health insurance policy holders can login into their portal and process the payment online through payment gate way system.

Responsibilities:

- Analyzed the complete architecture of various applications in-order to design the application.
- Performed the requirement analysis by interacting with key stakeholders to get a better understanding of the scope and deliverables of the project.
- Developed AJAX framework for the project using jQuery, Servlet, and JSP.
- Designed and Developed code for the XML driven UI using JSP, XML, JavaScript, HTML, CSS.
- Ability to rapidly prototype interface designs in hand-coded validating, standards-compliant, and semantically rich code and be aware of cross-browser compatibility and bugs.
- Understanding of application development lifecycle methodologies.
- Used jQuery document to generate API documentation for JavaScript code.
- Knowledge of human factors and usability, best practices for interface design.
- Defined text alignment, size, borders, and many other typographic characteristics.
- Responsible for code optimization and testing of the website across different browsers.
- Designed, created, and implemented custom Interwoven Team Site modifications to fully automate such activities as publishing, deploying, and updating online content (HTML, JavaScript).
- Built, configured and deployed Web components on Web Logic application server.
- Wrote Java code for accessing trade data from Oracle and DB2 databases using JDBC API and SQL queries and accessed it from J2EEWeb component.
- Implemented GUI screens for viewing trade data using Servlets, JSP, HTML, CSS, jQuery, JavaScript and Spring MVC. Updated UI as per changing needs and requirements.
- Performed Bug fixes for existing software system and software enhancement.
- Used best practices while creating the web pages.
- Understood their existing code and made changes to adapt to the unique environment.

Environment: AJAX, JSP, JavaScript, WebLogic, Oracle, JDBC, API, SQL, J2EE, GUI, spring MVC, HTML, CSS, JavaScript, jQuery, XML, Bootstrap, JSON, DTD Restful API, AJAX, Servlet.

RECOGNITIONS

Infosys BEST PERFORMING ASSOCIATE for contributing proactively to Verizon's IEN project
CITI bank's STAR award to Virtusa's Associate for outstanding contribution to client's success story
