SUMMARY

Accomplished Senior Mainframes Developer with extensive experience at Stellantis, Cognizant, Satyam Computers, and BNY Mellon. Specializes in COBOL and DB2, with a proven track record of leading teams to enhance legacy applications and streamline processes, resulting in significant operational improvements. Strong analytical skills, combined with a commitment to quality, ensure successful project delivery and client satisfaction.

TECHNICAL SKILLS

- IBM Z/OS, OS/390,MVS/ESA/XA,DOS,Windows
- COBOL,CICS,JCL,SQL,Natural,Easytrieve,C
- MQ series, Python
- DB2, ADABAS, IMS DB,Oracle,MySQL
- VSAM, Teradata
- TSO/ISPF
- FILEAID
- REXX
- Dump master, AbendAid
- Endeavor,Changeman,Panvalet
- SPUFI,QMF,PL/SQL
- FTP,NDM
- CA-7,TIVOLI
- Postman
- Mainframe programming
- COBOL development
- Application debugging
- API development
- Production support
- Project management
- Application Development
- Agile methodology

EDUCATION

MASTER OF ENGINEERING

Mechanical engineering, College of engineering, Anna University, India, Sep 1998 - Jan 2000

BACHELOR OF ENGINEERING

Automobile engineering, IRTT, Bharathiar University, India, May 1994 – May 1998

CERTIFICATIONS

- Certified AWS Cloud Practitioner, 2023-2027
- Certified AWS Cloud Architect, 2024-2027
- Brain bench certified COBOL, JCL, VSAM, CICS Programmer

AWARDS

- Information Technology Sector Recognition Award, 2004-2005, for Print Mail Vendor Project from Bank of New York (Pershing LLC)
- Pursuit Of Excellence Award, 2007-2008, from Satyam Computers for the VIMS Project
- Winner of the BFS Applause - Star Award-BFS R&R, Q4 08
- Certificate for achievement, 2014-2015, from Kathy Grady (Unum CIO) for Unum AMS
- Spot award, 2015-2016, Opal PCES fixing broker compensation issue
- Top performer award, 2018-2019, Managing the team effectively with zero escalation/defect
- People of the week award, 2021-2022, Exemplary dedication and Commitment on executing the one of the enhancements works and saved 20 hours of manual efforts per month

EXPERIENCE

STELLANTIS(FCA IT) -JULY 2021-FEB 2025

Senior Mainframes Developer, Stellantis, July 2021-February 2025

Auburn Hills, MI

- Company Overview: Stellantis (FCA Chrysler automobile) delivers business solutions to the Mopar vehicle protection application.
- This application mainly provides a service contract for the Canadian Stellantis vehicles.
- The application is used to create new plans and maintain the existing plans.
- Once the plan converts to a contract, it takes care of the maintenance of the service contracts.
- Working and guiding the team in requirement gathering, design, analysis, and development of new components, and enhancement of existing components.
- Provide production support in fixing the jobs to make sure the cycles won't affect the completion of the business requirements without delays.
- Work on the ad hoc process to generate reports and to fulfill the requirements.
- Do a data break fix, and make changes to resolve the tickets created by business and application users.
- Conducting self and peer reviews, and ensuring adherence to quality standards in deliveries.
- Involved migrating the IMS DB into the DB2 database.
- Analyze the business requirements, and prepare system requirement documents.
- Prepare design documents for high-level to low-level projects.
- Stellantis (FCA Chrysler automobile) delivers business solutions to the Mopar vehicle protection application.
- This application mainly provides a service contract for the Stellantis vehicles and used to create new plans and maintain the existing plans.
- Once the plan converts to a contract, it takes care of the maintenance of the service contracts.

COGNIZANT TECHNOLOGY SOLUTIONS – MAY 2008 TO JUNE 2021

Mainframe Developer, Liberty Mutual, Feb 2017-June 2021

Portland, NH

- Policy admin application (eCLIQ) support and Safeco Commercial Lines (COMLINE) ,TINA and CLIQ developed and supported commercial insurance policies, covering various lines of business, like automobiles, workers' compensation, and business owners across the U.S.
- Enhanced legacy applications and provided solutions for improving functionality.
- Hands-on mainframe experience with rich technical expertise in mainframe, customer-facing and pre-sales experience, and a good understanding of new-age mainframe languages and tools.
- Strong application programming experience in JCL and COBOL, managing a 20-member team that supports Legacy MF and Go Forward applications.
- Identifying the CSI opportunities, and creating a problem ticket to address the issue permanently.
- Review all the development works approved as part of L4 Core and L4.
- As part of the L2 activity, supporting and fixing the complex problems faced in different portfolios in Liberty/Cognizant scope applications.
- Peer review of all the deliverables going into production.
- Generate various ad hoc and critical reports as per the requirements of the business.

Sr Mainframe Module Lead, Unum Insurance, June 2014-January 2017

Portland, USA

- Company Overview: Unum specializes in disability insurance, and we started supporting the applications related to policy administration and marketing.
- Prepare functional specification documents and technical specs.
- Prepare impact analysis documents and list out the elements.
- Analyze various programs according to the impact analysis document.
- Develop application programs for CARS applications.
- Also involved in preparing Production and Test JCL for testing and deploying the production version of JCL.
- Modify COBOL, DB2, IMS, CICS, and VSAM programs as per the technical docs.
- Effectively using Smart Test for debugging and testing.
- Working with IMS commands and system definition, including DBD, PSB, ACBGEN, and online IMS commands.
- Work on the IMS environment for new applications, transactions, and IMS recovery procedures in batch mode.
- Involved in the business management process.
- Recording the sessions using Camtasia for future reference and training.
- Generate various ad hoc and critical reports as per the requirements of the business.
- Unum specialized in disability insurance, and we started reporting the applications belonging to policy administration and marketing.

Sr Mainframes Developer, MEDCO, November 2011-May 2014

Franklin Lakes, USA

- 256 BRT services - NRx application: 256 BRT services project started to work on the 450+ backlog items under order processing COE.
- A group of services was taken for each sprint, based on the priority from the business.
- All the backlogs belong to the NRx application, which was the core application for order processing, and it was written in mainframe sprint based on the priority from the business.
- I worked on around four sprints, which consisted of 120+ backlogs.
- Also, support the services in all the testing environments, such as QA, UAT regions, until they move to production.
- The support includes the clarifications and mapping questions from the DataPower and Pega teams.
- Analyze the functional design and document interface requirements.
- Design new batch and online application interfaces for the accounts payable system.
- Modifying the COBOL II, DB2, VSAM, JCL, and CICS programs.
- Enhanced the existing CICS online dialogs to handle the new requirements for supplier data conversions.
- Create and execute the unit, integration, and systems testing plans using Expeditor and Test Director.
- Maintain or prepare the test data for testing the jobs by using INSYNC tools.
- Participate in peer specifications and code review to establish quality standards and procedures.

Sr Mainframes Developer, Key Bank, April 2010-November 2011

Cleveland, USA

- General ledger and marketing applications supporting admin (GLJ and NXG), core customer applications, and lending applications.
- The project was initiated to support six marketing applications (Automated Opportunity Marketing, Prospect part of Siebel implementation, Household Engineering, Web Campaign Registration, Affinium, Marketing Premium Fulfillment) around the clock in production.
- The production region was monitored, and the abends were fixed upon receiving the call from batch support.
- Involved in the meeting with Business Process Owners, SMEs, and developing business process flows for the Application Overview Document.
- Review and finalize pre-migration requirements and action plan.
- Developing and changing COBOL, DB2, and CICS programs as per the Impact Documents in the Development region.
- Perform optimization of SQL queries to improve throughput and performance.
- Analysis and scheduling of JCLs.
- Working as a senior developer for the Scrum Team-NRx application.
- Creating new services and modifying existing ones in order to gain access from the Pega end.
- Analysis, Design, Coding, and Testing of COBOL, CICS, and DB2 Programs.
- Peer review of all the deliverables going into production

SATYAM COMPUTER SERVICES -APRIL 2006-MARCH 2008

Sr Software Engineer, NISSAN NORTH AMERICA, April 2006-March 2008

Chennai, India

- Dealer incentive systems
- The project was initiated to support six critical retail applications (dealer financial statements, host router, dealer KPI, dealer KAGS, VIMS, and CDB) around the clock in production.
- The production region was monitored, and the abends were fixed upon getting the call from Operations. I am the team lead for all four applications, and I am supporting all six applications while training the three software engineering trainee associates.
- Analysis of the VIMS and DIC systems and preparing the business requirement documents.
- Design new batch and online application interfaces for the DIC (Dealer Incentive System) system.
- Worked as a team lead, handling a 3-member mainframe team.
- Analysis, design, coding, and testing of COBOL, CICS, DB2, and NATURAL programs.
- Reviewing the documents prepared manually by the team.
- Monitoring the batch jobs and resolving the abends by using AbendAid.
- Creating or modifying the JCLs for rescheduling or restarting the jobs.

BNY MELLON TECHNOLOGY – FEB 2004 – APRIL 2006

Senior Application Developer, BNY Mellon Technology, February 2004-April 2006

Chennai, India

- Baseline production support.
- The project was initiated to support 146 applications, round the clock, in production.
- The production region was monitored, and the abends were fixed upon getting the call from I/O control.
- The timely, unresolved abends were raised as per the escalation procedure, and the issues will be fixed overnight by an emergency turnover.
- The number of applications was reduced to 36 after two years, as each DPG was assigned to their system.
- Providing temporary and permanent solutions for job ABENDS in production.
- Analysis, Design, Coding and Testing of COBOL/CICS/DB2 programs
- Reviewing the documents prepared manually by the Team
- Proficiency in developing test plans, test cases scenarios
- Implement Software Installation procedures and Perform Production monitoring and initial support and attended technical meetings and maintaining good Documents
