

Chetan Reddy Gajjala

Software Development Engineer

Long Beach, CA | +1 9097035886 | chetanreddygajjala16@gmail.com | [LinkedIn](#)

SUMMARY

Software Development Engineer with **3+ years of experience** designing scalable systems using Node.js, TypeScript, AWS, Java, and Spring Boot. Proficient in microservices architecture, REST/GraphQL APIs, and CI/CD automation with Jenkins, Docker, and Terraform. Strengthened application performance and reliability by 30%+ through clean code, optimized data flow, and cross-functional collaboration in Agile environments.

TECHNICAL SKILLS

Programming & Development: Python, Java, JavaScript, TypeScript, C++, React.js, Node.js, Angular, Django, Flask, Spring Boot, REST APIs, GraphQL, Microservices

Cloud & DevOps: AWS (EC2, Lambda, S3, RDS), Azure, Google Cloud, Docker, Kubernetes, Terraform, CI/CD, Jenkins, Serverless Architecture

Databases & Data Management: MySQL, PostgreSQL, MongoDB, DynamoDB, Redis, SQL Optimization, Data Modeling, ETL

AI/ML & Emerging Tech: AI-assisted coding (GitHub Copilot/ChatGPT), TensorFlow, PyTorch, Scikit-learn, LLM APIs, Big Data Basics (Spark/Hadoop)

Version Control & Collaboration: Git, GitHub, GitLab, Bitbucket, Agile/Scrum, Jira, Confluence, Remote Collaboration

Testing & Security: Unit Testing, TDD, Jest, PyTest, Selenium, OWASP Top 10, Secure Coding, Code Reviews

Software Design & Architecture: OOP, Design Patterns, SOLID Principles, Scalable & Fault-Tolerant System Design, Performance Optimization

Soft Skills: Problem Solving, Critical Thinking, Team Collaboration, Communication, Adaptability, Quick Learner

PROFESSIONAL EXPERIENCE

Datadog, CA, USA

Jan 2025 - Current

Software Development Engineer

- Planned and deployed AWS microservices using Node.js and TypeScript, improving throughput by 32% and reducing latency across distributed telemetry pipelines.
- Developed REST and GraphQL APIs backed by PostgreSQL and Redis, decreasing query time by 35% and enabling reliable, low-latency data access for real-time analytics.
- Automated build, test, and release pipelines with Jenkins and Terraform, reducing deployment time from 6 hours to under 45 minutes while maintaining zero rollback incidents.
- Built Python-based telemetry exporters for Datadog APM, expanding monitoring coverage by 45% and shortening production issue resolution time by 40%.
- Optimized data ingestion and caching mechanisms, increasing log processing throughput from 3M to 5.5M events/hour under heavy load.
- Strengthened application security by enforcing IAM roles, input sanitization, and CSP policies, cutting vulnerability exposure by 30% and achieving full compliance during quarterly audits.
- Developed React.js-based real-time monitoring dashboard integrating with Datadog APIs, improving incident visualization accuracy by 40% and reducing alert triage time.
- Enhanced front-end performance by implementing lazy loading, code splitting, and WebSocket-based live updates, improving UI load times by 55% for high-traffic monitoring pages.
- Collaborated with cross-functional teams in Agile sprints, maintaining 98% on-time delivery and improving sprint efficiency through peer reviews and automated regression testing.

Infosys, India

Sep 2021 - July 2023

Software Engineer

- Developed large-scale enterprise modules using Java, Spring Boot, and Angular, improving response time by 40% and supporting 10K+ concurrent users across regions.
- Built and optimized Angular front-end components with RxJS and NgRx, reducing DOM re-rendering time by 45% and enhancing user interaction responsiveness on enterprise dashboards.
- Created normalized MySQL schemas and optimized MongoDB indexes, improving query efficiency by 50% and reducing backend CPU usage by 22%.
- Refactored legacy applications into Dockerized microservices on AWS ECS, reducing infrastructure costs by 28% and increasing scalability under peak workloads.
- Implemented Jest and PyTest within CI pipelines, achieving 92% test coverage and cutting QA verification time by 35%.
- Delivered secure REST APIs with JWT authentication and HTTPS encryption, ensuring 100% audit compliance and zero critical vulnerabilities.

- Reduced code complexity by 25% through SOLID-based refactoring and linting automation, improving maintainability and reducing bug-fix turnaround by 46%.
- Collaborated with UI/UX teams to implement responsive layouts and accessibility (WCAG 2.1) standards, boosting user satisfaction scores and meeting enterprise compliance goals.
- Partnered with product and QA teams to align technical priorities with business goals, enhancing feature release cadence and maintaining customer-reported defect rate below 1%.

EDUCATION

Master of Science, Cyber Security California State University, Dominguez Hills, California, USA	May 2025
Bachelor in Technology, Computer Science and Engineering Presidency University, Bengaluru, India	May 2023

CERTIFICATION

- AWS Certified Cloud Practitioner** – Amazon Web Services
- CompTIA Security+ (SY0-701)** – CompTIA (*Validates secure coding and system protection knowledge*)
- CCNA - Cisco** (*Foundational networking concepts, optional for SDE roles*)
- OSCP- Offensive Security** (*Advanced system exploitation and security testing – relevant for secure backend roles*)

PROJECTS

- **SmartTask Pro – Task Management Platform (MERN Stack):** Built a real-time task platform with React.js, Node.js, and MongoDB, deployed on AWS EC2 via Docker and GitHub Actions CI/CD, improving user productivity by 35%.
- **Cloud-Based Patient Data Management System (AWS Serverless):** Designed a HIPAA-compliant architecture using Lambda, DynamoDB, S3, and Cognito, enabling secure, scalable patient-data storage and reducing operational costs by 28%.
- **Deceptive Threat Monitoring with ELK Stack:** Deployed Cowrie honeypots and integrated with Elasticsearch, Logstash, and Kibana to visualize attacker behavior in real time and increase threat-detection accuracy by 25%.
- **Unified Cybersecurity Threat Detection System (Flask + Python):** Built a real-time Flask dashboard detecting ransomware, phishing, and DDoS attacks via Snort and TShark, enhancing incident response speed by 42%.
- **Lung Cancer Detection using CNN (VGG-16):** Trained a TensorFlow/Keras CNN to classify lung cancer from X-rays and deployed through Flask API for mobile predictions, achieving 91% diagnostic accuracy.
