Software Engineer who loves working on all aspects of development — frontend, backend and full stack — to turn ideas into reality. Skilled in tools and frameworks like **React/Next.js**, **Node.js** and **Python** with over 9 years of experience. I'm passionate about building products that truly connect with users and make a difference. My work includes creating customized CRM, AI-powered support tools, and dynamic, user-friendly web applications. I always prioritize solutions that are simple, efficient, and focused on what users need most.

EDUCATION

Penn State University

08/2011 – 05/2015

Bachelor's Degree, Computer Science

SKILLS

Front End: React.js, Next.js, Angular, Vue.js, JavaScript/Typescript, HTML5/CSS3, Tailwind CSS, Material UI
Back End: Python, Node.js, Java, Django, Flask, Nest.js, Spring Boot, GraphQL
Database: MongoDB, MySQL, PostgreSQL, Redis
DevOps: AWS, Azure, GCP, CI/CD, Docker, Kubernetes
Testing: Junit, Pytest, Jest, Cypress, Playwright, TDD
Tools: Docker, Jira, Webpack, Babel, NPM, Yarn, PNPM, GitHub, GitLab, Trello, Figma, ESLint/TSLint, VS Code, Jest, Mocha, Enzyme, Cypress, Playwright
Other Skills: C++, Webpack, Elastic Search, Accessibility, Web Socket, Responsive Design, WordPress, Headless CMS, Shopify, Storybook, SEO, Object-Oriented Programming (OOP), Project Management, Multitasking, Teamwork, Detail-Oriented, Creative Thinking

EXPERIENCE

Lead Full Stack Developer

07/2022 - PRESENT

Jones Lang LaSalle (JLL), Inc.

- Architected the migration of a legacy plain JavaScript web app within a monolithic ASP.NET ecosystem into a modern Next.js (React) application backed by Django (Python) microservices, improving both user-perceived and actual performance by optimizing service call distribution.
- Developed a custom CRM for real estate rentals using Angular and a Node.js backend with PostgreSQL, integrated into an in-house platform, and leveraged an analytical engine to increase customer.
- Built a data collection and scraping application using Flask (Python) and PyQt, integrating an AI engine and GPT models, and conducted extensive debugging to resolve key system issues.
- Optimized core application interactions involving complex React.js render lifecycles and a partially React-compliant third-party library, resulting in a 75% reduction in time to next paint.
- Designed and generated internal and external e-blasts using Oracle Marketing Cloud, adhering to JLL branding standards through advanced CSS3 templating and responsive design.

- Provided consultation on feature and performance enhancements, including implementing email tracking with SendGrid, improving Azure Search synchronization times by 40%, and enabling server-side rendering for SEO optimization.
- Scaled an experimental project into a Tier 1 revenue-generating application providing commercial real estate listings and lead generation across 12+ countries, contributing to a 15% increase in international lead capture.
- Implemented a containerized architecture using Docker and Kubernetes, deploying to AWS EKS for centralized service management and reducing deployment times by 30%.
- Mentored junior frontend engineers on Angular (v12) and TypeScript best practices, conducting one-on-one code review sessions to simplify complex concepts and improve team code quality.
- Conducted in-depth research on real estate rental trends and authored the report ***Seasonal Factors Influencing Tourism Rental Trends, 2023***.
- Spoke at the Life Sciences Event 2023 Conference at JLL.

Skills: React/Next.js, Redux, Node.js, Typescript, Angular, Python, Django, Flask, GraphQL, Tailwind CSS

Full Stack Developer

01/2018 – 07/2022

Graycor, Inc.

- Developed a scooter rental platform using Spring Boot (Java), React/Redux, and TypeScript with a microservices architecture; refactored backend systems to slim and simplify the overall architecture.
- Demonstrated strong problem-solving and collaboration skills during the beta launch of Graycor's adoption of Textura CPM, a web-based SaaS platform for payment management, supporting a successful rollout.
- Integrated JWT authentication with OAuth2 and third-party identity providers, enabling seamless Single Sign-On (SSO) capabilities and improving user login efficiency.
- Maintained and enhanced a Java RESTful web service providing healthcare information based on the HAPI FHIR library, introducing new features, endpoints, and critical bug fixes that improved API stability by 20%.
- Contributed to the development of a mobile application using React Native and Firebase; implemented push notifications and additional features, resulting in a 25% increase in daily active users.
- Built a reusable Nest.js package for streamlined RabbitMQ integration, improving message queue management and reducing integration time across multiple services by 30%.
- Applied deep expertise in Tailwind CSS and UI/UX design, delivering highly responsive, user-centered interfaces with increased development productivity by 20%.
- Developed and maintained backend services using Node.js, AWS Lambda, and GraphQL, improving serverless function execution and API performance.

Skills: React.js, Node.js, Typescript, Python, Java, Material UI, Kafka, CI/CD, Github Actions

Associate Software Developer

06/2015 – 01/2018

Bechtel Oil, Gas, & Chemicals

- Developed enterprise-grade mobile and web applications using React Web, React Native, HTML, CSS, JavaScript, and .NET.
- Created and maintained various Web APIs for user management, resource retrieval, search functionality, and handling transactional and marketing emails, improving system efficiency and reliability.
- Transformed the application build and deployment process by migrating from traditional Maven/Tomcat builds to containerized Docker deployments, reducing deployment times by 40%.
- Worked within an Agile and Scrum environment alongside the BMC team, contributing primarily to front-end and UI development.
- Developed and managed cloud infrastructure using Terraform, AWS, Azure, and GitLab, supporting scalable and automated deployments.

Skills: Node.js, MongoDB, Docker, ASP.NET, RESTful API, Agile methodology

Software Developer Intern

06/2014– 05/2015

Amazon

- Developed RESTful APIs using Spring Boot, Java 7, and RSQL, following test-driven development (TDD) practices.
- Coordinated the end-to-end development, testing, and release process, ensuring smooth deployments from development to production environments.
- Self-taught and applied Scala to support Ansys's migration from a monolithic architecture to a microservices-based system.

Skills: HTML, CSS, JavaScript, jQuery, C#, Java, PHP, Figma

PROJECTS

Nantucket Rental

<https://nantucketrentals.com/>

Nantucket's real estate market remains robust, characterized by high property values and limited inventory.

- Conducted research on real estate rental trends and authored the report ***Seasonal Factors Influencing Tourism Rental Trends, 2023***, based on data analytics of transaction history.
- Led the development of a CRM module, implementing core features and designing a complex yet intuitive dashboard integrated with third-party libraries.
- Developed the front-end using Next.js and Tailwind CSS, and successfully deployed the application via Vercel.

Lattis

<https://lattis.io/>

Lattis is a comprehensive mobility platform designed to support shared-use fleets of electric scooters, bicycles, e-bikes, mopeds, and more.

- Upgraded the admin dashboard using Angular and implemented backend microservices with Spring Boot to enhance system scalability and performance.
- Developed a mobile application for users, integrating IoT device communication, Google Maps services, and a real-time vehicle tracking system.
- Worked on cloud-native solutions, utilizing AWS ECS, Route53, and RDS for deployment, and set up CI/CD pipelines for continuous integration and delivery.
