PROFESSIONAL SUMMARY:

IT professional with over 6 years of hands-on experience in all stages of the software development lifecycle, specializing in building enterprise-grade web applications with a focus on performance, reliability, and clean architecture. Skilled in both frontend and backend development, cloud deployment, and DevOps practices.

- Specialized in full-stack application development using Java (Spring Boot), Python, React, and Angular for building responsive and scalable solutions.
- Designed and implemented microservices architectures on AWS and GCP to achieve scalability, fault tolerance, and optimized resource usage.
- Developed robust REST and GraphQL API incorporating modern security protocols such as OAuth 2.0 and JWT, with API Gateway integration for routing, throttling, and access control.
- Built dynamic and responsive Single Page Applications using React, Redux, TypeScript, Angular, Bootstrap, and Tailwind CSS to deliver modern user interfaces.
- Developed event-driven systems using Apache Kafka, AWS SNS/SQS, and Google Cloud Pub/Sub, enabling distributed data handling and high-throughput processing.
- Worked extensively with Spring modules like Core, AOP, Security, Messaging, MVC, ORM, and Data JPA to streamline enterprise-level Java applications.
- Managed infrastructure components using AWS services including Lambda, EC2, S3, CloudFront, IAM, CloudFormation, EMR, Redshift, and DynamoDB.
- Built AWS cost-monitoring tools to track and optimize cloud expenditure.
- Experienced in using monitoring tools such as Splunk, Grafana, and New Relic for log analysis, system health checks, and alerting mechanisms.
- Proficient in using Git, GitHub, Bitbucket for version control and automating build and deployment processes through Maven, Gradle, and Jenkins CI/CD pipelines.
- Developed automated testing suites using JUnit, Mockito, PowerMock, Selenium, Cucumber, and TestNG for thorough unit and integration testing.
- In-depth experience with Hibernate features like connection pooling, caching, HQL, Criteria API, transactions, and optimistic locking.

TECHNICAL SKILLS:

Programming Languages	Java 11/21, Python, Javascript, Typescript
Frameworks	Spring Boot, Spring MVC, Spring Batch, Security, AOP, Hibernate, Spring Data JPA
Cloud & Infrastructure	AWS (EC2, Lambda, S3, IAM, CloudFormation, CloudFront, DynamoDB, Redshift, EMR), GCP (Pub/Sub)
Front-End Technologies	React.js, Angular, Redux, Bootstrap, Tailwind CSS, HTML5, CSS3
Microservices & APIs	REST, SOAP, GraphQL, JAX-RS, JAX-WS
Databases	MySQL, PostgreSQL, Oracle, MongoDB, SQL Server, Redis, DynamoDB
Testing & Monitoring Tools	JUnit, Mockito, PowerMock, TestNG, Selenium, Cucumber, LOf4J, Splunk, Zipkin, Dynatrace
DevOps & Build Tools	Maven, Gradle, Jenkins, Git, Bitbucket, SonarQube, JaCoCo, Helm, Kubernetes

Methodologies	Agile (Scrum), Waterfall, Test-Driven Development (TDD), CI/CD practices
----------------------	--

PROFESSIONAL EXPERIENCE:

Fidelity, Westlake, TX
FullStack Java Developer
July 2024 - Present

- Actively engaged in the complete software development lifecycle, beginning with business requirement analysis, converting those into technical specifications, followed by hands-on development, peer code reviews, unit testing, integration testing, and final production deployment using Agile Scrum with two-week sprint cycles.
- Participated in backlog grooming, sprint planning, and story pointing to define realistic goals and deliverables, contributing to high sprint velocity and timely product releases.
- Developed secure and maintainable REST APIs using Spring Boot, incorporating robust exception handling, custom validation logic, and OAuth 2.0-based authentication and authorization mechanisms.
- Integrated multiple third-party financial service providers using vendor APIs, ensuring secure communication using mutual TLS, API keys, and token exchange while adhering to internal risk and compliance guidelines.
- Created and orchestrated complex ETL processes using Spring Batch for processing high-volume financial data with checkpoints, listeners, retry logic, and job schedulers to ensure data accuracy and resilience.
- Modernized several monolithic legacy systems by decoupling components and migrating them into microservices architecture using modern Spring Boot and Java 21 features like records, sealed classes, and pattern matching.
- Integrated Circuit Breaker and fail-safe patterns into Spring Boot microservices using Resilience4J to ensure fault tolerance and resilience in distributed systems.
- Engineered Angular 16 based UI modules with reusable custom components, lazy-loaded modules, RxJS observables, and reactive forms, enhancing responsiveness and user engagement.
- Improved accessibility and performance of front-end applications using Lighthouse audits, ensuring compliance with WCAG standards and achieving sub-second load times on critical user journeys.
- Tuned and optimized database queries by rewriting complex joins, indexing frequently accessed columns, and profiling slow-running stored procedures in PostgreSQL and SQL Server.
- Implemented Jenkins CI/CD pipelines with Docker containers for build automation, code quality checks (via SonarQube), and blue-green deployments with rollback support in non-prod and prod environments.
- Created Prometheus exporters and integrated Spring Boot Actuator metrics with custom tags for memory, CPU, heap usage, and thread analysis, aiding observability and proactive alerting through Grafana dashboards.
- Architected reusable Terraform modules to manage AWS resources, including EC2, S3, Lambda, RDS, and VPCs, ensuring infrastructure consistency.
- Implemented serverless solutions on AWS using Lambda, API Gateway, and DynamoDB, reducing operational costs and increasing agility.
- Authored Gherkin scenarios using Cucumber for end-to-end test automation, aligned with product acceptance criteria, improving developer-QA collaboration and reducing manual testing time.
- Defined branching strategies and environment-level configurations to support multiple versions of microservices in concurrent production use, enabling seamless canary releases and controlled rollouts.

- Collaborated closely with cross-disciplinary teams such as Site Reliability Engineering (SRE), infrastructure architects, DevOps engineers, and information security teams to ensure that solutions were scalable, fault-tolerant, compliant, and secure.
- Automated generation of financial reconciliation reports through batch jobs and integrated them with reporting tools for internal and regulatory audit purposes, reducing turnaround time by 70%.

Tech Stack: Java 21, Spring Boot, Spring Batch, AOP, Spring Security, OAuth, Angular 16, AWS REST, Kafka, Hibernate, PostgreSQL, Oracle, PL/SQL, MongoDB, Prometheus, Docker, Jenkins, Git, Cucumber, IntelliJ, Tomcat, Windows

PNC Bank, Dallas, TX

Role: Full stack Java Developer

March 2022 - June 2024

- Spearheaded development of enterprise-grade internal applications used by various departments, handling full-stack responsibilities with a focus on backend scalability and front-end usability under Agile project methodologies.
- Built modular Java microservices with Spring Boot and Spring Data JPA to encapsulate business logic, handle complex entity relationships, and expose them through RESTful endpoints.
- Secured microservices using OAuth 2.0 and JWT authentication, following best practices and working with DevOps for Azure migration and infrastructure optimization.
- Orchestrated end-to-end data flow pipelines using Spring Batch for tasks like inventory sync, data transformation, and transaction aggregation, with cron scheduling and retry logic to handle failures.
- Created cross-platform desktop applications using Electron bundled with Angular 11 for departments needing offline capabilities, ensuring faster app boot times and native performance features.
- Developed reusable Angular components and form validators for shared modules to standardize look and feel across different tools and applications.
- Refactored legacy Spring applications by modularizing monolithic structures, implementing Spring Profiles for environment segregation, and adopting microservice standards for cloud deployments.
- Integrated Azure Key Vault for centralized management of secrets and credentials, automating credential rotation and enforcing access policies via IAM roles and RBAC.
- Integrated Kerberos SSO with internal systems, reducing password fatigue among employees and simplifying the authentication flow for dozens of internal tools.
- Used Apache Maven build tool to automate the build process and Jenkins CICD pipeline.
- Automated multi-environment deployment pipelines using Jenkins and Terraform, significantly reducing manual intervention and deployment times.
- Utilized Spring Data JPA for efficient data access and persistence, leveraging its features such as repositories and query methods.
- Designed and maintained RESTful APIs, documented with Swagger for improved developer onboarding and collaboration.
- Worked on Cucumber to develop and execute BDD test scenarios and Selenium to design and implement automated test scripts, ensuring the systematic validation of web applications.
- Used Log4J for logging and tracing the messages. Worked on Splunk, Grafana and Dynatrace.
- Deployed services as Docker containers and used Kubernetes Helm charts for scalable, self-healing deployments with health checks, auto-scaling, and log forwarding configurations.
- Designed and configured GitLab-based CI/CD workflows for build automation, test execution, code scanning, and deployment triggers for multi-region deployments.

- Assisted with high availability design by managing load balancing configurations and setting up readiness/liveness probes for critical services to ensure uninterrupted uptime during rolling updates.
- Automated nightly reporting jobs and archival tasks with scheduling and retry logic, reducing manual overhead and preventing SLA breaches.

Tech Stack: Java 11, Spring Boot, Microservices, Spring Batch, Angular 11, REST, Kafka, Hibernate, SQL Server, Oracle, Azure Key Vault, Docker, Kubernetes, GitLab, Jenkins, MongoDB, IntelliJ, Windows

Capitalone, Plano, TX

Java Developer

August 2019 - February 2022

- Functioned as a primary developer on a distributed remote team, working independently and asynchronously with cross-border teams to deliver key product features on schedule while practicing Agile principles.
- Designed and implemented microservices using Spring Boot with a layered architecture, service registry, and configuration server, providing loosely coupled, maintainable codebases.
- Built robust Kafka pipelines for message streaming, logging, and analytics, handling millions of events daily, while enabling dead-letter topics for failed event tracking and reprocessing.
- Configured Kafka consumer group settings, batch listeners, retry mechanisms, and offset strategies for guaranteed message processing and delivery.
- Integrated Spring Boot Actuator endpoints for real-time application telemetry, health indicators, and trace IDs to improve root cause analysis and operational monitoring with Grafana and CloudWatch.
- Developed backend utilities such as log rotation handlers, email notification modules, and data purging jobs using Node.js and Express, complementing the core microservices.
- Leveraged Hibernate with Oracle and PostgreSQL for ORM-based data access, incorporating second-level caching and custom fetch strategies for better performance.
- Employed Mongoose to model MongoDB schemas, including validation rules and relationship mapping for managing NoSQL document-based collections.
- Documented REST APIs with Swagger UI and OpenAPI, enabling interactive exploration, versioning, and streamlined developer onboarding. Secured APIs using Basic Username Password Authentication and role-based access control.
- Containerized services using Docker and maintained Kubernetes manifests for production workloads, configuring replicas, services, volume mounts, and ingress rules on AWS-hosted clusters.
- Implemented CI/CD pipelines using Jenkins and Ansible, integrating security scans, performance tests, and promotion rules to automate deployments from development through staging and production.
- Worked with AWS services such as EC2, S3, SQS, IAM, AWS Lambda, and CloudWatch to build scalable cloud solutions.
- Maintained DevSecOps practices with vulnerability scanning tools, regular patching of container images, and dependency checks to ensure compliance with security guidelines.

Tech Stack: Java 8, Spring Boot, Spring MVC, REST, Kafka, Hibernate, PostgreSQL, MongoDB, Oracle, Docker, Kubernetes, AWS (EC2, S3, IAM, SQS, CloudWatch), Swagger, Jenkins, Git, IntelliJ, Windows

Education Details: Master's Degree in Cyber Security, California State University, Dominguez Hills
