Career Summary

As a Software Integration Architect at Boggess Advisory Group, I have consistently been recognized as a top performer, driven by my unwavering commitment to tackling the firm's most challenging problems. My quick ability to absorb new concepts, coupled with a professional attitude and a deep understanding of modern technologies and architectural patterns, has set me apart in the industry.

Over the past 18+ months, I have served as the Lead Developer on a critical digital transformation initiative for a Fortune 500 company in the Wealth Management sector, managing over \$100B in assets under management (AUM). In this role, I leveraged my extensive knowledge of full-stack technologies—including Java, Kafka, and microservices—to drive the migration and integration of complex data systems. My work with technologies like Spark, Cassandra, Hibernate, Docker, Swagger, and Spring Boot ensured that the solutions I developed were not only robust but also scalable and future-proof.

I am now looking to bring my strong design and development experience in Java/Kotlin full-stack technologies to a forward-thinking technology environment, where I can continue to innovate and optimize data flows and big data solutions, particularly in the context of microservices and large-scale migrations. My passion for solving complex technical challenges and driving strategic initiatives makes me eager to contribute to a team that values cutting-edge technology and transformative projects.

Summary of Skills

- Proven track record of seamlessly integrating enterprise-grade, cloud-native data platforms with high-frequency data streams using Kafka, ensuring robust and scalable solutions for complex business needs.
- Highly skilled in Object-Oriented Programming (OOP), with a deep understanding of Software Development Life Cycle (SDLC), design patterns, and concurrent programming, particularly in Java-based microservices architectures.
- Expert in leveraging Java, Kotlin, JSON, XML, SQL, and Groovy to build, optimize, and maintain scalable microservices, enabling efficient data flow and real-time processing.
- Strong analytical and critical thinking skills, honed through tackling complex problems and delivering innovative, data-driven solutions in fast-paced environments.

Technical Skills

Kotlin, Java, Core Java, C#, Groovy, SQL, CQL, SH, Bash, GNU/Linux, Windows PowerShell, Batch, LUA, CICD, Gradle, JPA, Maven, Spark, Cassandra, Kafka, NIFI, MuleSoft, Geode, Ignite, MsSQL, PostgreSQL, MySQL, MariaDb, Percona, Spring Boot, Spring, CSS, jQuery, Hibernate, Docker, NGINX, SOAP, RESTful, Swagger, Tomcat, Elastic-Search, Kibana, Git, Oracle, Web Services, Jaeger, VisualVM, SonarQube, Vert.x, Data Warehousing, Reactive Programming, OOP, Software Design Patterns, Concurrent and Async Programming, Distributed Compute, IntelliJ, Flink, HDFS, Hadoop, Cloudera Impala, Control-M, Jenkins, Protobuff, Avro, Micronaght, Splunk, Azure, AWS, AKS, Javascript, Helm, Dynatrace

**Professional
Experience**

J.B. Hunt Transport Services - Transport Services

9/2024 – 3/2025

Technical Project Team Lead / Senior Java Developer [Contracted](Fortune 300)

- Responsible for leading a technical team in the design, development, and implementation of enterprise-grade Java applications, ensuring alignment with business requirements and industry best practices around internal Loads 360 products responsible for all modern loads data within J.B. Hunt.
- Architecting and optimizing backend systems using Java, Spring Boot, and related technologies while overseeing code quality, performance enhancements, and cross-functional collaboration.

PricewaterhouseCoopers - Profession Services

5/2022 – 8/2024

Technical Project Team Lead / Senior Java Developer [Contracted]

- Led the long-term support and continuous development of an internal Apache NiFi platform on AKS and Cloudera Data Flow, enabling codeless development for other teams while advancing data provenance and integrating with Java-based microservices to ensure seamless data processing and real-time event handling.
- Successfully migrated the internal Apache NiFi big data platform to Cloudera Data Flow, collaborating closely with Cloudera architects and Apache NiFi teams to address concerns and optimize performance. Additionally, I assisted leadership in defining necessary SLAs and integrating Kafka and Azure Event Hubs to enhance the platform's event-driven architecture.
- Mentored and onboarded new team members, providing in-depth training on our product, processes, object-oriented design (OOD), AKS solutioning, Apache NiFi usage, big data best practices, and the integration of Java-based event systems like Kafka and Event Hub to ensure robust, scalable solutions.
- Collaborated with tech leadership to identify risks associated with the NiFi migration, designed comprehensive support models for the internal NiFi platform, and developed custom NiFi processors, deployment code, and High-Level Documentation (HLDs) for NiFi pipelines, integrating Java and event-driven architecture to enhance the platform's capabilities.
- Provided support and advisory services for the internal Workbench application development, which produced and consumed internal RESTful API endpoints, built on top of Spring and integrated with Kafka and Event Hub to manage and process events across distributed systems efficiently.

Centene - Managed Care Company

10/2021 – 5/2022

Project Lead Software Application Engineer [Contracted]

- Led strategic decisions for cloud migration of on-premises solutions to AWS, ensuring that the architecture remained cloud-agnostic. Collaborated with business leadership to present cost analyses, advise on technology choices, and integrate event-driven systems like Kafka and Event Hub, maintaining a robust and scalable infrastructure.
- Mentored and onboarded new team members, providing comprehensive training on our product, processes, object-oriented design (OOD), and the implementation of Java-based microservices, Kafka, and Event Hub for real-time data processing and event management.
- Trained support engineers to identify and troubleshoot bugs, offer assistance to teams onboarding to our platform, and deliver exceptional support. Conducted seminars on Java integration with event-driven systems, enhancing their ability to manage and optimize the platform.

- Collaborated with tech leadership to articulate and communicate the core business values of our platform to business leaders and potential customers, emphasizing the platform's capability to leverage Java, Kafka, and event systems like Event Hub for high-performance, scalable solutions.

Gravitee.io – API Management French API Startup

03/2021 – 09/2021

Senior Java Developer [Contracted](OSS Startup)

- Responsible for developing full stack API Access Management features including self account management, Multi-factor authentication (including OPT, SMS, Email, Biometric), and angular front-end features with backend support.
- Groomed to be Technical Liaison/Brand ambassador for US prospects exploring solutions implementing Gravitee API management, Gravitee API Access Management, and Gravitee Cockpit dashboarding.
- Looping, maintaining, and developing technical documentation as informational media and marketing content for technical architectural level decision makers in prospective positions
- Mentoring junior developers on Java, Core Java, TypeScript, Vertx, Web Application Development, and OOA&D.

JPMorgan Chase & Co. – Corporate & Investment Banking

04/2020 – 03/2021

Senior Java Developer [Full Time Employee](Fortune 100)

- Responsible for being the vanguard for our Banking Reservoir team, leading the way during a migration from physical servers to virtual servers, using Hadoop HDFS for big data migrations.
- Lead my team to a production implementation of NIFI, provided mentorship to those who were new to the technology, and created protocol and best practices meeting industry standards in regards to the NIFI migration.
- Integrated new tech with existing systems, and created ETL for data about JPMC COIN (new JPMC blockchain technology), and restricted country data feed ETL for countries like Luxembourg and Indonesia.

Cascade – Financial Services

09/2019 – 04/2020

Senior Lead Java Developer [Contracted]

- Designed and implemented Java/Mulesoft ETLs to assist with large Data Warehouse migration from Microsoft SQL to PostgreSQL
- Analyzed a Microsoft SQL Data Warehouse and coordinated with Data experts to understand and implement a Snowflake schema based on an operational data store.

Northwestern Mutual – Investments Products and Services

04/2018 – 12/2019

Senior Lead Java Developer [Contracted] (Fortune 100)

- Worked with core IPS team to migrate and transform on-premises platform to AWS cloud platform utilizing Vert.x, Cassandra, MySQL, Percona, MariaDB, and Docker.
- Responsible for assisting with automated Core Java code generation from Swagger based vendor APIs to Rx Vert.x vendor services, and concurrent async RESTful API endpoints.
- Analyzed, designed, and implemented RESTful JavaScript migration to code generated Rx Java equivalents with Project Managers, Legacy team, Business Managers, and Technical Managers.
- Built a comparison service to seamlessly transition between (and compare) legacy JavaScript APIs to new cloud-based Java APIs using Cassandra caching.

- Provided development leverage to parallel tracks within the Digital Platform transformation effort utilizing time-management skills and ability to effectively context-switch between complex initiatives.

Bogges Advisory Group

01/2016 -04/2020

Senior Software Architect (promoted Feb 2017)

- Developed a system to receive, price, sort, and persist loans to a database, using a data pipeline that allowed users to consume real-time information and ensured continuity of reporting databases utilizing NIFI, Kafka, Cassandra and MySQL.
- Artificial Intelligence / Machine Learning Proof of Concept to help Approve, Reject, and Refer insurance adjustment.
- Created Asynchronous RESTful API endpoints using Vert.x and Kotlin to concurrently digest mortgages into, remove mortgages from, and update mortgages in a MySQL database alongside an Apache Geode cache.

Bogges Advisory Group

01/2016 - 04/2020

Integration Architect

- Developed a web client to consume the API using Kotlin, Spring, and JavaScript and supply solutions for all mortgage origination needs.
- Developed a python process siphoning wrapper in Kotlin to deploy as asynchronous RESTful API endpoints.
- Mentoring junior developers on Java, JavaScript, Kotlin, Web Application Development, and OOA&D.

Sr. Developer (promoted May 2016)

- Developed high-speed Thomson Reuters TREP emulation in Core Java.
- Designed and implemented product design with Product Managers, UX team, and Business Managers.

Jr. Developer (hired Jan 2016)

- Designed, built and tested a continuous integration system using Gradle, SVN, Bash scripts and 3rd party Gradle libraries.

Loomis Sound

05/2013 – 10/2015

Audio Engineer

- Vocal tuning and mix preparation for Kirk Franklin, **Grammy Award winning artist.**
- Audio Engineer for Shawn Mendes, Jennifer Hudson, and T.I.

Education

Full Sail University, Orlando, FL. Bachelor of Science, Digital Audio Processing, 2013

Awards & Associations

- Google Cloud Onboard
- Creative Minds Scholarship – Full Sail University
- Member, American Society of Composers Authors and Publishers
- Member, Game Audio Network Guild
