

ERIC KENUI

SQL Server Database Administrator

Richmond, TX 77407 | +1 (301) 326-6129 | eric.kenui7@gmail.com | www.linkedin.com/in/eric-kenui

PROFESSIONAL SUMMARY

Results-driven SQL Server Database Administrator with 7+ years of experience managing mission-critical databases across enterprise, cloud, and hybrid environments. Skilled in performance tuning, high availability/disaster recovery (HA/DR), automation (Redgate, dbatools, Azure DevOps), and backup modernization. Proven success in database migrations, security hardening, and operational optimization using tools such as SolarWinds (DPA), SentryOne, and Idera Diagnostic Manager. Recognized for ensuring maximum uptime, data integrity, and business continuity across large-scale infrastructures.

Areas of Expertise: Performance Tuning | HA/DR | Azure SQL | Redgate Automation | Backup & Recovery | Security & Compliance | Cloud Migrations | Monitoring & Optimization | Data Migration Expert

TECHNICAL SKILLS

MS SQL Server (2008–2022), Azure SQL DB, Azure Managed Instances, MySQL, PostgreSQL, T-SQL, SQL, PowerShell, SQL Profiler, Extended Events, Query Store, SentryOne, SolarWinds (DPA), Idera Diagnostic Manager, Spotlight, DMVs, Always On Availability Groups (on-prem & cloud), Log Shipping, Replication, Failover Clustering, Rubrik, Avamar, Cohesity, DDBoost, Native SQL Backups, Transparent Data Encryption (TDE), Azure AD MFA, User Access Auditing, Redgate SQL Toolbelt, dbatools, Azure DevOps, CI/CD Pipelines, ARM Templates, Rally, Confluence, Visual Studio, SSMS, SSRS, SSIS, Power BI, Azure IaaS, Azure Managed Instances, Azure DMS, Azure Blob Storage, Azure Data Studio, Azure Storage Explorer, AWS EC2, Data Migration Assistant, Data Migration Expert, VMware, vSphere, Hyper-V, ServiceNow, Jira, Windows Server, Linux, macOS, VMware

PROFESSIONAL EXPERIENCE

SQL Server Database Administrator

Graebel Companies, Inc. | Houston, TX | Feb 2024 – Present

- **Situation/Task:** Production systems experienced performance degradation under heavy workloads.
Action: Leveraged SQL Profiler, Extended Events, Query Store, and DTA to analyze workload patterns and tune queries.
Result: Improved system throughput and reduced query execution times by 35% in 24/7 production environments.
- **Situation/Task:** Mission-critical databases required consistent responsiveness.
Action: Monitored and tuned response times across large production workloads using DMVs, SQL Sentry, and SolarWinds DPA.
Result: Sustained stable performance and availability for business-critical applications.
- **Situation/Task:** Manual DBA maintenance tasks were consuming significant time.
Action: Automated backups, index maintenance, log shipping, and Always On checks using PowerShell and dbatools.
Result: Reduced manual workload by 30% and improved operational efficiency.

- Situation/Task:** Organization adopted a cloud-first strategy requiring scalable and secure Azure databases.
Action: Provisioned and managed Azure SQL Databases, Managed Instances, elastic pools, and VMs; migrated on-prem workloads.
Result: Delivered cost-optimized and secure cloud solutions that met business growth needs.
- Situation/Task:** Business required stronger identity security for cloud database access.
Action: Implemented Azure Active Directory Multi-Factor Authentication (MFA) for privileged accounts.
Result: Reduced unauthorized access risks and strengthened data security and compliance.
- Situation/Task:** Developers required database schema and object enhancements.
Action: Designed and modified tables, stored procedures, functions, and triggers to support application requirements.
Result: Delivered efficient and maintainable database solutions aligned with business needs.
- Situation/Task:** Junior DBAs needed operational guidance and training.
Action: Provided mentoring on upgrades, migrations, best practices, and DR procedures.
Result: Improved team capability, reduced knowledge gaps, and accelerated onboarding.
- Situation/Task:** Disaster recovery readiness was required for compliance.
Action: Implemented and tested DR strategies including corruption recovery, storage failure handling, and cross-region replication.
Result: Achieved RPO <15 min and RTO <1 hr, meeting audit and compliance requirements.

SQL Server Database Administrator

CSAT Solutions | Houston, TX | May 2020 – Feb 2024

- Situation/Task:** Legacy databases limited scalability and support.
Action: Led migration of 30+ databases from SQL Server 2012 to 2019 with schema refactoring and minimal downtime.
Result: Achieved zero downtime migrations, improving infrastructure scalability and vendor support coverage.
- Situation/Task:** High availability was critical for business operations.
Action: Designed and implemented Always On Availability Groups and Failover Clustering on-prem and in AWS EC2.
Result: Delivered 99.99% uptime and seamless failover/failback during production incidents.
- Situation/Task:** Database performance was impacted by slow queries and suboptimal indexes.
Action: Tuned queries and optimized indexes using SQL Profiler, Extended Events, Query Store, and execution plan analysis.
Result: Improved application response times by 40% and stabilized production performance.
- Situation/Task:** Security audits identified gaps in encryption and access control.
Action: Implemented Transparent Data Encryption (TDE), fine-grained permissions, and Azure AD MFA.
Result: Reduced security exceptions by 80% and passed all audit reviews.
- Situation/Task:** Rising IT costs impacted operational budgets.
Action: Consolidated servers, migrated workloads to **Azure elastic pools**, and leveraged **VMware** virtualization.
Result: Saved \$250K annually in licensing, hardware, and support costs.
- Situation/Task:** Backup reliability needed improvement.
Action: Automated backup verification and index maintenance scripts.
Result: Achieved 99.9% restore accuracy and reliable operational continuity.

- **Situation/Task:** Developers and analysts required guidance on best practices.
Action: Provided mentoring, code reviews, and capacity planning advice.
Result: Reduced deployment incidents by **25%** and strengthened system scalability.

SQL Server Database Administrator

HEB | San Antonio, TX | Feb 2017 – Mar 2020

- **Situation/Task:** Legacy systems were outdated and unreliable.
Action: Migrated 20+ legacy SQL Server 2012 systems to 2016 with schema refactoring and careful planning.
Result: Improved system reliability, vendor support, and application stability.
- **Situation/Task:** Disaster recovery readiness was limited.
Action: Designed and tested DR strategies using log shipping and native backups.
Result: Enabled fast recovery with minimal data loss during critical events.
- **Situation/Task:** ETL processes and reporting pipelines were delayed.
Action: Optimized SSIS packages, SQL queries, and batch jobs.
Result: Reduced ETL runtimes by **50%**, improving reporting efficiency.
- **Situation/Task:** Enterprise-scale SQL Server environments required high uptime.
Action: Administered and optimized 14TB+ VLDBs, monitoring production workloads with SLAs in mind.
Result: Delivered consistent high availability and mission-critical stability.
- **Situation/Task:** High availability in the cloud was required.
Action: Implemented Always On Availability Groups in AWS and Azure, including multi-node clustering, read-scale routing, and job synchronization.
Result: Ensured seamless failover/failback during production incidents.
- **Situation/Task:** Data replication and CDC processes faced latency issues.
Action: Developed replication scripts, tuned agents, and resolved latency conflicts.
Result: Achieved near real-time synchronization between systems.
- **Situation/Task:** Server hardware lifecycle management needed attention.
Action: Oversaw server lease replacements and decommissioning.
Result: Maintained smooth transitions with zero unplanned outages.

EDUCATION & TRAININGS

Bachelor of Science in Computer Engineering | December 2015

- **Advanced Database Administration Training (300+ Hours) | KiawiTechIT Academy – Texas**
