EDUCATION

University of Massachusetts Amherst

Dec 2024

Master of Science in **Computer Science** (GPA: 3.91/4)

Courses - Distributed Systems, Software Engineering, Computer Networks & Security, Neural Networks, Advanced NLP

Savitribai Phule Pune University

May 2020

Bachelor of Engineering in Information Technology

EXPERIENCE

Manning CICS

Jan 2025 – Present

Software Engineer

Amherst, MA

- Built RESTful APIs with **Node.js** and **Express** that reduced content update time by **93%**, enabling administrators to manage user data, events, and forms with near real-time responsiveness.
- Redesigned and developed the homepage component of UMass ISA website with a modern appearance using **React**.

UMass Dining

Jan 2024 – May 2024

Software Engineer Intern

Amherst, MA

- Proposed and developed a Python script for shift schedule resolution that saves **5800+ hours/year** for 9 dining facilities.

Cloudwerx

Nov 2020 – Dec 2022

Software Engineer

Pune, India

- At Cloudwerx, a service-based technology company, I contributed to several key projects, including:

CRM Application (Insurance Client)

- Reduced yearly spending by **\$4M+** by building an orchestration engine to automate approval of invoices meeting criteria.
- Developed a distributed notification service using RabbitMQ that delivered **500,000+** alerts daily.
- Optimized processing of deeply nested JSON data from requests to create relational records, reducing response time by **25%** by implementing **REST API** endpoints using **Python** and **Fast API**.

Wealth Management Product (FinTech Client)

- Architected and optimized backend infrastructure by **refactoring REST APIs, and SQL queries**, resulting in a **25% performance boost** to the calculation engine and improved system response times for complex financial models.
- Led complete redesign of financial scenario modeling feature, enabling multi-scenario analysis and household member inclusion through **React** component re-engineering, driving a **17% increase in customer satisfaction** scores.

Employee Onboarding Product (HR Client)

- Designed and developed an **end-to-end** onboarding product that achieved **80%** reduction in time to onboard an employee.
- Programmed an interactive onboarding progress tracker with completion indicators and an embedded PDF viewer.
- Integrated Google Drive for file uploads and Slack for delivering targeted notifications to HR teams and new hires.

PROJECTS

Asterix and the Stock Market | Python, Rest API, EC2, Docker, gRPC, Multi-threading, Micro-services [↗](#)

- Developed a high-performance stock market trading platform by engineering a series of robust backend services using **multi-tiered microservice** architectures with RESTful APIs using **Python** and deployed to **AWS** for scalable performance.
- Reduced stock lookup request latency by **21.3%** by implementing in-memory **caching** using **cacheout**.

Catstronauts | GraphQL, TypeScript, Node.js, Apollo Server 4, React, Apollo Client, JWT, PostgreSQL [↗](#)

- Created a learning platform for adventurous cats eager to explore the universe, leveraging GraphQL with schema-first API design, typed resolvers, cursor-based pagination, JWT-secured mutations, and optimized Apollo Client caching.

RAG Question Answering System | Python, RAG, TensorFlow, vLLM, Vector Store [↗](#)

- Built a RAG QA service using vLLM for low-latency, high-throughput generation with Mistral-7B-I-v0.3 and FAISS retrieval.
- Implemented retrieval-confidence gating with answer fallbacks (re-retrieve→clarify→abstain), cutting hallucinations by 40%.
- Tuned chunking, and top-k/top-p to lift factuality and stability while keeping inference cost predictable.

Waves | React, JavaScript (ES6+), Node.js, HTML, CSS, Express, MongoDB, Redux, PayPal API [↗](#)

- Built a full-stack e-commerce application using **Express, MongoDB, and React**, incorporating features like product listing, filtering, pagination, a shopping cart, PayPal integration, and state management with **Redux**.

TECHNICAL SKILLS

Languages | Python, Go, JavaScript, TypeScript, SQL, HTML, CSS

Frameworks | Fast API, Flask, Django, React.js, Redux, RabbitMQ, Kafka

Databases | MySQL, MongoDB, PostgreSQL, DynamoDB

Cloud and Tools | Cursor, GitHub Copilot, AWS, Terraform, Git, Docker, Kubernetes
