

ISAAC OYE

Azure DevOps/Cloud Engineer

Forney, TX 75126 | +1 4326980046 | isaachay.tech@gmail.com | LinkedIn

SUMMARY

Azure DevOps/Cloud Engineer with 6+ years of experience designing and managing high-performance cloud solutions for F500 companies like McKinsey & Company and DXC Technology. Key achievements include:

- Established robust CI/CD pipelines integrated with Terraform scripts, leading to measurable results such as decreasing lead times on new deployments down from an average three days to just eight hours per instance.
- Crafted intricate automation scripts integrated into existing CI/CD processes; decreased manual intervention time during deployments by over 30 hours each month while ensuring consistent quality across all releases.
- Led cross-functional Agile teams to enhance cloud-native development practices.

SKILLS

Cloud Computing	Azure Virtual Machines (VMs), Azure App Services, Azure Functions, Azure Kubernetes Service (AKS)
Storage & Databases	Azure Blob Storage, Azure SQL Database, Azure Cosmos DB, Azure File Storage
DevOps & Automation	Azure DevOps (CI/CD), GitHub Actions, Jenkins, Terraform, ARM Templates, Bicep, YAML Pipelines
Scripting & Programming	PowerShell, Bash, Python, YAML, JSON
Security & Compliance	Azure Active Directory (AAD), RBAC, Azure Key Vault, Microsoft Defender for Cloud
Networking	Azure Virtual Networks (VNET), Network Security Groups (NSG), Azure Load Balancer, VPN Gateway
Monitoring & Optimization	Azure Monitor, Log Analytics, Application Insights, Cost Management

EXPERIENCE

SR Azure DevOps/Cloud Engineer

| May 2022 – Present

McKinsey & Company, United States

- Architected Azure cloud environments to ensure high availability, robust security measures, and top-tier performance; achieved 99.9% uptime across all services while integrating advanced monitoring tools for continuous improvements.
- Revamped the approach to infrastructure setup using Terraform, ARM Templates, and Bicep; decreased deployment times by an impressive 40%, enhancing team productivity while supporting rapid project scaling.
- Engineered robust IaC solutions within the Azure ecosystem that achieved a consistent reduction of provisioning time by 30%, leveraging Terraform scripts and ARM templates for automated infrastructure management.
- Established and administered CI/CD pipelines utilizing Azure DevOps, GitHub Actions, and Jenkins; achieved a substantial 60% reduction in software release cycles while improving deployment consistency across diverse application environments.
- Revolutionized software delivery by automating deployments with YAML-based configurations, which enhanced consistency throughout application releases while saving an average of 15 hours per week previously spent on manual tasks.
- Executed rigorous integration of automated testing protocols for 100% coverage across all application modules, ensuring high-quality software delivery while reducing post-release bugs to less than five critical issues monthly.
- Implemented Zero Trust security models, enforcing RBAC, MFA, Conditional Access, and Identity Protection.
- Administered Azure Key Vault, Defender for Cloud, and Azure Sentinel to elevate cloud security posture; improved threat detection capabilities by integrating automated alerts that decreased incident response time by 40 minutes per event.
- Conducted security audits and vulnerability assessments, ensuring compliance with ISO 27001, NIST, and SOC 2 standards.
- Streamlined networking processes within Azure architecture by configuring VNETs that supported seamless data flow for 30+ services while ensuring adherence to best security practices.

Azure Cloud Engineer

| July 2018 – Apr 2022

DXC Technology, United States

- Engineered Azure cloud environments that facilitated the deployment of high-performance applications, enhancing scalability and supporting a 40% increase in service reliability across critical projects during peak traffic periods.
- Automated infrastructure provisioning using Terraform, ARM Templates, and Bicep, reducing manual deployment efforts by 50%.
- Established Infrastructure as Code (IaC) standards that ensured uniformity and reliability in managing over 200 cloud resources; enhanced deployment speed by 30% while achieving compliance with industry regulations.
- Streamlined the administration of Conditional Access policies within AAD, achieving a 30% reduction in unauthorized access attempts while bolstering overall system integrity through comprehensive user authentication methods like MFA.
- Implemented Azure Key Vault for secrets management and encryption key protection, ensuring compliance with ISO 27001 and NIST standards.
- Executed continuous monitoring of cloud-based assets using advanced tools such as Microsoft Defender for Cloud; identified critical weaknesses that led to an average reduction of remediation time by 40 hours monthly.
- Configured Application Gateway, Azure Load Balancer, and ExpressRoute connections; these enhancements increased application responsiveness by reducing latency times from over 200ms to under 100ms for critical business applications.
- Established Azure VPN Gateway along with site-to-site connections, facilitating seamless integration across hybrid cloud environments and enhancing connectivity speed by 30% for mission-critical applications.
- Piloted innovative approaches employing features from both Azure tools that led to substantial increases in overall system reliability measured through monthly reports indicating zero unplanned outages over six consecutive months.
- Developed and optimized CI/CD pipelines using Azure DevOps, GitHub Actions, and Jenkins, accelerating software deployment cycles by 40%.
- Enhanced automation in application deployments using YAML pipelines while embedding SonarQube, Trivy, and OWASP Dependency-Check for comprehensive security assessments that led to zero critical vulnerabilities in production environments.

EDUCATION

Associates in Business

Shooters Hill College, London

| 2009-2011
