PROFESSIONAL SUMMARY

- **Full Stack Developer with 6+ years of experience** designing and delivering enterprise-grade applications using **Java 17** and **Microservices architecture**, deployed across **on-premises, AWS** and **Azure** cloud environments.
- Developed **RESTful and microservice-based APIs** using **Spring Boot, Spring MVC, and Node.js**, enabling secure JSON/XML data exchange with external and internal systems.
- Integrated **AI capabilities** using **Spring AI, Gemini APIs** and **Claude APIs** within backend services to enable **intelligent data processing and dynamic response generation**, reducing manual intervention and accelerating backend decision workflows.
- Integrated **AI-assisted** development tools, automated code analysis platforms, and intelligent debugging workflows, improving developer productivity and reducing defects by 25% across enterprise applications.
- Designed **responsive front-end interfaces** with **React.js, Angular, JavaScript, TypeScript, HTML5, CSS3, and Bootstrap**, ensuring cross-platform accessibility and intuitive user experience.
- Implemented **event-driven communication** using **Apache Kafka**, designing **topic-based messaging and consumer groups** to decouple services, handle **high-volume transaction events**, and prevent data loss through **retry and offset management**, improving system reliability under peak load.
- Utilized **Spring JDBC, JPA, and Hibernate** for ORM, integrating both **SQL (PostgreSQL, MS SQL Server)** and **NoSQL (MongoDB)** databases with high-volume transactional reliability.
- Hands-on experience with **Docker, Kubernetes and OpenShift** for containerization and orchestration, enabling scalable, reliable deployments across environments.
- Delivered applications through **CI/CD pipelines with Jenkins**, automating build, test, and deployment processes.
- Worked extensively with **AWS (EC2, ECS, S3, Lambda, RDS, CloudWatch)** and **Azure (App Services, Blob Storage, SQL Database, Monitor)** for hosting, monitoring, and scaling cloud-based applications.
- Skilled in **Agile Scrum methodology**, contributing across all **SDLC** phases from analysis to deployment and support.

SKILLS

- **Programming Languages:** Java, Python, JavaScript, Typescript, C
- **Frameworks and Libraries:** Spring Boot, Spring Framework, Spring MVC, Node.js, Hibernate, JDBC, JPA
- **Database Technologies:** SQL, PostgreSQL, MS SQL Server, MongoDB
- **Frontend Technologies:** HTML5, CSS3, React, JavaScript, TypeScript, Redux, Angular, RxJS, NgRx, jQuery
- **Testing:** JUnit, Jest, Mockito, Postman, Test-Driven Development (TDD), Integration Testing
- **Security:** Spring Security, OAuth2, JWT, Role-Based Access Control (RBAC)
- **Cloud & Runtime:** AWS (EC2, ECS, S3, Lambda, RDS, CloudWatch, API Gateway, SQS, SES), Azure.
- **DevOps Tools:** Jenkins, Docker, Kubernetes, AWS CodePipeline, Azure DevOps, YAML-based pipelines
- **IDE and Tools:** Eclipse, IntelliJ, Visual Studio Code
- **Version Control & Collaboration:** Git, BitBucket, GitHub, Jira
- **Operating systems:** Windows, Linux, Unix, Mac.

WORK EXPERIENCE

Full Stack Developer

Banner Health, Phoenix, AZ

Aug 2024 – Present

- Owned development of a **scalable healthcare portal** using **Java, Spring Boot, and React**, enabling real-time appointment scheduling and tracking, supporting **50K+ patient interactions monthly** and improving booking efficiency by **35%**.
- Designed and implemented **microservices architecture** using **Spring Boot**, building core services including **Patient Service** (profile management), **Provider Service** (doctor availability and scheduling), and **Appointment Service** (booking workflows), improving system modularity and reducing feature delivery time by 30%.
- Integrated **Elasticsearch-based server-side search**, reducing **search latency by 50%**, improving **system responsiveness**, and enhancing **patient communication**.
- Built responsive and dynamic **frontend applications** using **React.js, TypeScript, HTML, and CSS**, implementing advanced search and filtering, reducing **patient appointment search time by 40%**.
- Optimized data persistence using **Spring Data JPA, Hibernate, and PostgreSQL**, improving **query performance by 35%** through **indexing, query tuning, and transaction optimization**.
- Integrated **Claude AI APIs** into **Java Spring Boot backend services** to build **intelligent workflows and agent-like processing**, enabling automated data analysis and reducing manual effort in key application flows.
- Containerized microservices using **Docker** and orchestrated with **Kubernetes**, enabling auto-scaled deployments, improving **system availability to 99.9%**, and reducing **deployment time by 50%** across environments.
- Implemented **unit and integration tests** using **JUnit and Mockito**, and used **SonarQube** to maintain **0 critical vulnerabilities**.
- Implemented secure authentication and authorization using **Spring Security, OAuth2, and JWT**, enabling **role-based access control** and ensuring **HIPAA-compliant data protection**.
- Containerized microservices using **Docker** and deployed on **AWS (ECS, S3, API Gateway)**, enabling **scalable deployments**, improved system reliability, and efficient resource utilization with **CloudWatch monitoring and alerting**.
- Built and maintained **CI/CD pipelines** using **Jenkins**, automating **build, test, and deployment workflows**, reducing **manual effort by 60%** and enabling **faster release cycles**.

- Collaborated in **Agile (Scrum)** environment using **JIRA**, participating in **sprint planning, stand-ups**, and **retrospectives** to deliver **high-impact healthcare features** on time.

Full Stack Developer

JPMC, Mumbai, India

Jan 2021 – Dec 2022

- Contributed to the development of a **Fraud & Claims Operations Platform** used across the **Consumer & Community Banking (CCB)** division, supporting **high-volume retail dispute processing** and improving fraud case handling efficiency by **30%**.
- Designed and developed **RESTful APIs** and the **Claims Service module** using **Java, Spring Boot**, and **Spring Cloud Gateway**, automating **claim intake, analyst assignment, SLA tracking**, and **status notifications**, reducing manual processing effort by **40%** and improving turnaround time.
- Implemented **event-driven architecture** using **Apache Kafka** for asynchronous communication between **claims, audit, and notification services**, enabling reliable processing of thousands of financial transactions daily with improved system resilience.
- Engineered scalable data persistence using **Spring Data JPA** and **PostgreSQL**, designing **normalized schemas** and optimizing **transactional workflows**, improving data consistency and reducing query latency by **35%**.
- Utilized **asynchronous processing, multithreading, and Java streams** to handle concurrent claim events, increasing backend processing throughput by **40%** during peak transaction loads.
- Built interactive **Angular** components and **modular UI workflows** for claim submission, dispute tracking, and analyst dashboards, improving user experience and reducing claim tracking time by **30%**.
- Implemented **unit and integration testing** using **JUnit, Mockito**, and **TDD**, validating **claims processing workflows and API endpoints**, improving **test coverage to 85%+**, significantly reducing production defects.
- Containerized microservices using **Docker** and orchestrated with **Kubernetes**, deployed on **AWS (ECS, S3, API Gateway)**, enabling **scalable deployments**, improved system reliability, and efficient resource utilization with **CloudWatch monitoring and alerting**.
- Collaborated in **Agile (Scrum)** teams using **JIRA**, working closely with **QA, fraud analysts, and product stakeholders** to deliver high-impact features within sprint timelines.

Software Engineer

Principal Financial Group, Pune, India

Jan 2018 – Jan 2021

- Engineered scalable full-stack modules for a **Financial Wellness Platform** offering investment insights, goal tracking, and retirement planning using **Java, Spring Boot, Spring MVC, Node.js and React.js**.
- Developed **RESTful and microservice-based APIs** with **Spring Boot and Node.js**, integrating core financial analytics engines with web and mobile dashboards to deliver real-time portfolio insights.
- Built responsive, cross-platform user interfaces in **React.js** with **Redux** and **React Router**, optimizing state management and navigation to improve dashboard responsiveness by **30%**.
- Designed and normalized **SQL Server data models**, optimizing complex joins, transactions, and stored procedures for high-throughput financial data processing.
- **Integrated MongoDB as a NoSQL data store** for handling semi-structured financial analytics and user activity logs, enabling faster retrieval and flexible schema evolution alongside relational databases.
- **Consumed external SOAP services and parsed XML payloads** to integrate third-party data sources like credit score reports and real-time market feeds.
- Collaborated closely with QA and business teams, writing unit and integration tests using **JUnit**, and following **Test-Driven Development (TDD)** practices to ensure production-grade quality.
- Delivered scrum deployments through **CI/CD pipelines** built with **Jenkins, and Docker**, integrating regression tests and quality gates for reliable and containerized rollouts.
- **Leveraged AWS components** including **API Gateway, S3, and Lambda functions** for serverless processing of transaction updates and background reporting.
- **Troubleshoot and optimized backend services**, improving response times and ensuring system reliability under peak load conditions.

EDUCATION

Saint Louis University, St. Louis, MO
Master's in Software Engineering

2023-2024
CGPA: 3.82/4

CERTIFICATIONS

- AWS Certified Solutions Architect - Associate
- Microsoft Certified Azure Fundamentals
- JavaScript Algorithms and Data Structures
- Responsive Web Design
- Frontend Development Libraries
