Education

Virginia Commonwealth University

Bachelor of Science in Computer Science

GPA: 3.8

May 2022

Professional Experience:

Software Engineer @ American Express (Aug 2022-Current)

- As a member of the AMEX Network Modernization Team, I currently build and design applications and tools that increase efficiency for network transactions and data processing, in **Java, Python, & React**
- Developed Cloud Infrastructure Solutions using **Terraform** and **OpenShift Redhat** cloud that were deployed to production
- Created front-end automation tool using **React.js** to allow SRE teams to monitor, debug, and make changes to services on lower environments

Software Engineering Intern @ American Express (Summer 2021)

- Developed a frontend web application to process backend customer card authentication data
- Collaborated on a team **using Agile Development** using **React.js, VS Code, Postman, and Docker**

Cyber Security Analyst Quality Systems Management Inc. (Feb 2021- May 2022):

- Researched and developed Cybersecurity solutions and configurations
- Implemented vulnerability management, risk management, and CUI encryption management solutions
- Developed viable solutions to comply with CMMC guidelines

VCU Undergraduate Research Assistant (Aug 2020 – Feb 2021):

- Designed a Bio-Instrumentation Android Application for early COVID-19 identification using Java and Android Studio
- Led a multidisciplinary research team with mechanical and biomedical engineering research assistants

Skills:

Programming Languages: Java, HTML/CSS, C, Python, Selenium, SQL, React, C#, Groovy, SpringBoot

Software Tools: GitHub, Android Studio, Linux , Eclipse, PuTTY, VSCode, Filezilla, IntelliJ, MySQL Workbench, SQLite, Docker, Postman, Terraform, AWS, MongoDB, Couchbase

Methods: Agile Development, Waterfall Development Method, Test-Driven Development

Personal Projects:

Python Program – “InstaBot” (2020):

- Individually developed using Python and Selenium on VSCode
- Allows user to enter in their Instagram credentials so the program can collect a list of all their followers to perform 2 specific tasks: gain more followers for the user or like all of the user’s followers posts
- Data scrapes follower list to gain more followers the program follows the user’s followers’ followers and, in a sense, allows you to gain more followers when they follow back
- Also traverses through the list of followers quickly and likes all of their posts at a fast rate

Android Application - “Halfway” (2019):

- Developed using Android Studio, Java, and Google API
- Led team using Agile Software development process
- Allows user to locate a midpoint address between two given addresses, it generates special location information such as restaurants and parks and allows the generated address to be shared with others.
