

JORDAN JONES

Senior Full Stack Engineer

Springfield, IL

+1 (916) 542-0449 jjones32393@gmail.com www.linkedin.com/in/jordan-nm-jones

Experienced Senior Full Stack Developer with over 8 years of expertise in developing and deploying scalable web applications and backend systems. Specializing in **C#** and **.NET Core** for backend development and **Angular** and **React** for modern, responsive front-end interfaces. Proficient in building microservices, optimizing database performance with **SQL Server** and **MongoDB**, and implementing **DevOps** practices using **Docker**, **Kubernetes**, and **CI/CD** pipelines. Adept at leading teams, mentoring developers, and delivering high-quality software in **Agile** environments.

WORK EXPERIENCE

Senior Full Stack Engineer (Remote)

Jun 2023 – Present

United Airlines

- Spearheaded the development of a digital transformation platform using **C#/.NET Core** and **Angular**, delivering the project 15% ahead of schedule and improving system performance by 30%.
- Implemented state management using **NgRx** with **Redux DevTools** integration for centralized application state and improved debugging capabilities.
- Integrated **GraphQL APIs** using **Apollo Angular** for efficient data fetching, caching, and real-time updates, improving application performance.
- Created dynamic, reusable UI components using **Angular Material**, **Tailwind CSS**, and **MUI**, ensuring responsive and modern designs.
- Ensured accessibility compliance by implementing **WCAG** standards, increasing usability for users with disabilities.
- Employed **ASP.NET** server-side state management features such as application state, session state, and profile properties using **C#**.
- Introduced **gRPC** in the backend for low-latency, high-performance communication between microservices, particularly for real-time data synchronization across distributed systems.
- Deployed **ASP.NET Core** applications to **Azure App Services**, integrating with **Azure Functions** for serverless computing and **Azure Storage** for secure file storage. Improved cloud scalability and reduced infrastructure costs by 25%.
- Led a team of 8 developers, mentoring junior developers in **Angular**, **C#**, and **SQL** best practices. Conducted code reviews and ensured adherence to **Agile methodologies** for efficient project management.
- Built secure **RESTful APIs** using **.NET Core**, enhancing communication between the backend services and external systems, and enabling faster data retrieval.
- Designed and implemented **microservices** architecture to handle high-volume transaction processing, improving system scalability and reducing latency by 35%.
- Implemented secure authentication and authorization mechanisms using **OAuth 2.0** and **JWT**, ensuring secure access to backend services and protecting sensitive user data.

- Led the design and deployment of a **microservices** architecture using **.NET Core**, allowing for independent scaling and faster development cycles. Integrated **API Gateway** for load balancing and traffic routing between services.
- Introduced **CQRS** (Command Query Responsibility Segregation) pattern and **Event Sourcing** in the backend architecture, improving system performance and enabling better audit trails and data integrity.
- Implemented **CI/CD pipelines** using **Jenkins** and **Docker**, cutting deployment times by 80%. Automated testing processes to ensure seamless deployment across development, staging, and production environments.

Full Stack Engineer (Remote)

Jul 2020 – Jun 2023

Duke Energy Corporation

- Built and optimized Progressive Web Applications (**PWAs**) with **Angular**, enabling offline functionality, push notifications, and a native app-like user experience.
- Integrated **WebSockets** and real-time event streaming with Angular applications for live updates and notifications using **RxJS Subjects**.
- Designed and developed backend services using **C#**, **.NET Core**, and **SQL Server** to handle millions of requests per day, improving performance and reducing latency by 25%.
- Implemented microservices using **C#** to handle core functionality, improving system modularity and scaling during peak traffic periods by 30%.
- Managed and optimized **SQL Server** and **MongoDB** databases, improving data storage efficiency by implementing sharding and partitioning, reducing query execution times by 35%.
- Automated database backups and disaster recovery processes, ensuring zero data loss and reducing downtime during system failures.
- Integrated **SignalR** into backend services to enable real-time updates and notifications in the web applications, enhancing user experience in collaborative tools and chat features.
- Automated **database migrations** using **EF Core Migrations**, enabling continuous deployment without downtime and simplifying schema changes across environments.
- Leveraged **Entity Framework Core** for database interactions, implementing efficient **LINQ** queries and migrations, reducing SQL query complexity and improving data retrieval times by 35%.
- Implemented structured logging with **Serilog** and centralized log management using **Elastic Stack (ELK)**, improving debugging efficiency and providing real-time insights into application performance.
- Deployed containerized applications using **Docker** and managed orchestration with **Kubernetes**, improving infrastructure reliability and reducing operational costs by 20%.
- Developed CI/CD pipelines using **Jenkins** and **Terraform** to automate deployments and environment setups, reducing manual deployment errors by 90%.
- Monitored and improved application performance using **Prometheus** and **Grafana**, resulting in a 40% reduction in system outages and faster issue resolution times.
- Trained and mentored junior developers on **Angular**, **C#**, and **Agile** development best practices. Conducted code reviews and implemented **Test-Driven Development (TDD)** to improve code quality.

Web Engineer (Hybrid)

Apr 2018 – Jun 2020

Gartner

- Built and maintained dynamic, responsive web applications using **React** and **CSS3**, improving user satisfaction by 30%.
- Implemented **React Hooks** for state management, improving code readability and performance. Created responsive designs using **Bootstrap**, optimizing the web application for both desktop and mobile platforms.
- Designed and implemented backend services using **C#**, **ASP.NET Core**, and **SQL Server**, reducing API response times by 25% and increasing overall system efficiency.
- Managed **SQL Server** databases, optimizing queries and implementing database partitioning, reducing data processing times by 30%.
- Integrated third-party APIs with **C#** backend services to expand platform capabilities, improving system functionality by 20%.
- Deployed applications to **AWS** using **Docker** and **Kubernetes**, increasing application reliability and improving system uptime by 15%.
- Implemented **OAuth 2.0** and **SSL certificates** for secure API communications, ensuring the system adhered to industry-standard security practices.
- Developed custom middleware components in **ASP.NET Core** to handle request logging, response caching, and authentication, improving the overall modularity of the system.

Frontend Developer (Hybrid)

Jan 2016 – Mar 2018

Walgreens

- Led the frontend development of interactive, responsive web applications using **React**, **Angular**, **CSS3**, and **SCSS**, improving overall user satisfaction by 50%.
- Developed reusable components and modules in **React** to reduce the development time for new features by 25%. Integrated dynamic form handling and validation using **React Hook Form** to streamline user interactions.
- Implemented **unit testing** and **end-to-end testing** using **Jasmine** and **Protractor**, achieving 95% code coverage and reducing production bugs by 30%.
- Collaborated with backend developers to integrate **GraphQL** for optimized data fetching, reducing API calls by 40% and improving the frontend's performance.
- Developed build and deployment scripts using **Webpack** and **Gulp**, automating manual tasks and reducing deployment times by 30%.
- Improved website accessibility by implementing **WCAG** standards, increasing usability for users with disabilities by 20%.

SKILLS

- **Design Techniques:** Object Oriented Design, Design Patterns, Database Design, SOLID Principles, Microservices
- **Methodologies:** SCRUM, Agile, Kanban, Test Driven Design, Behavior Driven Design, Domain Driven Design
- **Web Technologies:** Node.js, jQuery, Angular, React, OData, Web API, MVC
- **Languages:** C#, F#, VB, .NET, Java, JavaScript, Python, HTML, SQL
- **Development Frameworks:** .Net Core, .Net Framework, ORMs, WPF, WF, WCF, PySpark, Pandas
- **Development Tools & IDEs:** VS Code, Visual Studio 2008-2022, Eclipse, NetBeans, Microsoft Visual Studio 6.0
- **Database Management Systems:** PostgreSQL, MySQL, SQLite, MS SQL Server, Oracle, NoSQL, Cassandra
- **Configuration & Build:** Git, Subversion, VSS, TFS, MS Build services, Jenkins
- **Application Servers:** IIS, Apache, Azure Service Fabric
- **Containerization & Orchestration:** Docker, Kubernetes
- **Platforms:** Azure, AWS EC2, Lambda, Databricks, Azure DevOps, Azure Data Factory, SSAS, SSIS

EDUCATION

Boston University | 2015

BS in Computer Science
