

Krishna Murthy Arudala

Senior .NET Full Stack Developer

Ph: +1 (316) 290-9575 | Email: krishnamurthy0728@gmail.com

PROFESSIONAL SUMMARY:

- Over 11+ years of IT experience utilizing Agile/Scrum development techniques, actively involved in the analysis, design, development, implementation, testing, troubleshooting, and maintenance of client-server and backend web-based applications built on N-tier architectures using Microsoft technologies.
- Extensive experience in developing applications using design patterns such as MVVM, MVC 3/4, Abstract Factory, Singleton, XAML, and WPF. Strong understanding of Object-Oriented Design (OOD) principles, including inheritance, polymorphism, abstraction, and encapsulation
- Proficient in developing highly interactive web applications using the Kendo UI framework.
- Experienced in creating backend components and designing connection logic to establish Node.js connections with external web services.
- Skilled in building web applications using C#, .NET WinForms, ASP.NET MVC 5.0, ASP.NET Web API 2 in .NET 4.6.1/4.5, Dapper, and Entity Framework 6, incorporating jQuery, JavaScript, and AJAX for client-side functionality.
- Extensive experience working with Microsoft SQL Server (2019, 2016, 2014, 2010, 2008), including T-SQL, normalization, stored procedures, rules, views, and indexes.
- Proficient in front-end technologies such as Angular 14, AngularJS, ReactJS, NodeJS, Bootstrap, JavaScript, jQuery, HTML/HTML5, CSS/CSS3, and MongoDB for database integration.
- Extensive experience working with Microsoft SQL Server (2019, 2016, 2014, 2010, 2008), including T-SQL, normalization, stored procedures, rules, views, and indexes.
- Strong grasp of service-oriented architecture (SOA) with expertise in utilizing the .NET Framework to create, consume, and publish XML Web Services (SOAP, WSDL). Proficient in developing online applications using AJAX Toolkit, HTML 5/4, DHTML, XML, and Classic ASP.
- Knowledge of Continuous Integration & Deployment (CI/CD) for Microservices using tools like Jenkins, Docker, and OpenShift. Experienced in running services in Docker containers via the command prompt and Visual Studio, as well as performing integration testing.
- Proficient in developing scalable and high-performance applications using .NET Core and .NET 4 frameworks, leveraging their capabilities to meet business needs effectively.
- Extensive experience in designing and implementing RESTful APIs using .NET Core for seamless integration between client applications and backend services.
- Experience in object-relational mapping using ADO.NET, Entity Framework Core, LINQ, and Object-Oriented Programming in VB.NET and C#. I am skilled in applications utilizing Hibernate, Entity Framework Database First, Code First, and performance tuning in EF, ADO.NET, and Microsoft Enterprise Library Data Access Application Block.
- Skilled in SQL Server database development, including database design, query optimization, and stored procedure development, ensuring efficient data storage and retrieval.
- Expertise in AWS Lambda, AWS Aurora, AWS Shark Flow, PostgreSQL, AWS DynamoDB, AWS SQS, AWS Glue, AWS API Gateway, AWS S3, AWS Code Commit, GCP, and SQL Azure.
- Experience in Microsoft .NET Framework 3.5, designing and programming with ASP.NET Core, C#, Web API, VB.NET, XML, CSS, and JavaScript.
- I have good knowledge of Microservices and AWS, including EC2, RDS, DynamoDB, S3, CloudWatch, and Docker.
- Proficiency with DTS packages, stored procedures, triggers, cursors, functions, and views in SQL Server, as well as PL/SQL. Skilled in SQL Server Reporting Services (SSRS), SQL Server Analysis Services (SSAS), and Crystal Reports for business reporting. Experienced with Team Foundation Server (TFS) and Visual Source Safe (VSS), as well as Perforce.
- Hands-on experience in configuring, installing, and troubleshooting IIS 5.1, IIS 6.0, and IIS 7, including setting up Windows Server environments for Microsoft web servers (IIS) in development and QA environments.
- Working knowledge of Web Services, .NET, XML, XSLT, XPath, and XML Schema.
- Knowledge of validating, extracting, transforming, and loading data into SQL Server using SSIS, as well as scheduling jobs for running SSIS packages.

- Proficient in database management, including SQL, with expertise in RDBMS concepts, database design, data mapping, table normalization, and data modeling.
- Experience in configuration and version management using SVN, TFS, and GIT, as well as defect tracking tools like JIRA, Visual Studio Team Services, and Database projects. Worked extensively with TFS Framework, generating ORM Models and integrating them using T-SQL and LINQ to Entities.
- Extensive experience in Test-Driven Development (TDD) using frameworks such as NUnit, MS Unit Tests, SpecFlow, and xUnit for automated testing, ensuring system stability under varying conditions.
- Designed and implemented automated integration test suites for end-to-end testing of C# applications, verifying interoperability and functionality of integrated modules and external dependencies.
- Worked extensively with ADO.NET objects such as Data Adapter, Dataset, and Data Reader to interact with databases like SQL Server 2012/2008 R2/2008/2005/2000 and Oracle 9i/8i.
- Refactor legacy applications into scalable microservices for cloud migration, ensuring alignment with Azure standards. Improve code structure and performance by removing redundancy, optimizing efficiency, and reducing technical debt.

• TECHNICAL SKILLS:

.NET Technologies	ASP.NET, ASP.NET MVC4/5, Entity Framework 5/6/Core, WEB API, ADO.NET, AJAX, Classic ASP, LINQ, WCF, WPF, SILVERLIGHT
Languages	C# .NET, VB.NET, VB, C, C++, PL/SQL, T-SQL
Web Technologies	HTML, HTML5, DHTML, XML, XSLT, XSD, WSDL, XAML, SOAP, BOOTSRAP, CSS, CSS3, JSON, Web forms, Web Services, POWERSHELL
Scripting Languages	JavaScript, jQuery, knockout JS, Node JS, VB Script, Angular.JS, React, Python, PHP
DBMS	SQL SERVER 2014/2012/2008/2005/2000, Oracle11g/10g/9i/8i, IBM DB2, MS Access, PostgreSQL, NoSQL, (MongoDB, Cosmos) Framework, Microsoft .Net 1.X/2.0/3.0/3.5/4.0/4.5/Core
Operating Systems	Win NT, ad Win 95/98, Win-2000/2003/2008/2010, Windows Vista, OSX, Unix
IDE Tools	Visual Studio 2003/05/08/10/12/13/15/17/19, VS Code, Atop, Eclipse, IntelliJ
Web Servers	IIS 5.0/6.0/6.5/7.0
Reporting Tools	SSRS, SSIS, Crystal Reports 7.0/9.0
Version Control	Visual Source Safe 6.0, Team Foundation Server, SVN, GIT
Cloud Platforms	Microsoft Azure, GCP, Office 365, AWS
Software Methodologies	Agile SCRUM, Agile RUP, Waterfall

EDUCATION:

Jawaharlal Nehru Technological University, Kakinada, India.

Bachelor of Technology in Electronics and communication Engineering.

WORK EXPERIENCE:

Senior .Net Full Stack Developer | Wanclouds INC, Santa Clara, California, US.

(Sep 2022 – present)

Project description: As a .NET Full Stack Developer, I designed and maintained ASP.NET Core web applications, utilizing C#, Entity Framework, and ADO.NET for backend development, while implementing Angular, React, and jQuery for the front end. I contributed to data analytics by integrating MicroStrategy and facilitated seamless data migrations using SSIS. Additionally, I deployed and configured applications in cloud environments, including Azure and Pivotal Cloud Foundry (PCF), while leveraging Kubernetes for container orchestration. I also optimized application performance and ensured secure, scalable deployments to support critical business operations.

Responsibilities:

- Developed, deployed, and monitored SSIS packages for new ETL processes, ensuring efficient data migration and integration.
- Designed and implemented interactive ASP.NET MVC views utilizing jQuery, HTML, CSS, React.js, AngularJS, Bootstrap, and AJAX to enhance user experience.
- Wrote TypeScript code to develop various functionalities and UI components for Angular applications, leveraging a component-based architecture.
- Implemented Azure DevOps Services for project management tasks, source code repository, continuous integration, and deployment.
- Created and optimized SQL scripts for data retrieval and migration from different data sources using SSIS.
- Designed and developed interactive dashboards and reports in MicroStrategy to support business intelligence initiatives and decision-making.
- Configured and managed cloud platforms, including Azure SQL, Azure Service Bus, and Azure Web Apps, while deploying and managing web jobs.
- Customized MicroStrategy reports to meet business-specific requirements, improving data visualization and insights.
- Installed and set up the Angular 4 development environment, including familiarization with Node.js, TypeScript, and Webpack loaders.
- Assisted in scripting Active Directory (AD) user and contact object updates using PowerShell to synchronize with Azure AD.
- Created reusable TypeScript components and services to consume REST APIs within an Angular 4-based application.
- Worked with NoSQL databases such as RavenDB, MongoDB, Cassandra, CouchDB, Redis, and DynamoDB for flexible data storage solutions.
- Designed and developed the Data Access Layer (DAL) using ADO.NET Entity Framework, LINQ to Entities, and C#, integrating Telerik UI controls.
- Responsible for microservices configuration and application deployment in Pivotal Cloud Foundry (PCF).
- Applied AGILE methodologies to ensure high-quality application development and iterative improvements.
- Developed ASP.NET web pages using C#.NET, HTML, CSS, AJAX, and jQuery for enhanced sorting and filtering functionalities.
- Used jQuery extensively for traversing HTML documents, handling events, and enabling AJAX interactions for a seamless user experience.
- Utilized Angular concepts such as modules, controllers, dependency injection, data binding, templates, expressions, custom directives, repeaters, and filters.
- Designed databases by creating tables, stored procedures, views, indexes, and relationships to optimize performance.
- Integrated Azure DevOps Services for source code version control and project artifact management.
- Implemented robust Object-Oriented Programming (OOP) principles, developing reusable C#.NET classes for database access.
- Utilized JavaScript for client-side validations and event handling, enhancing application responsiveness.
- Monitored and managed Azure AD licenses, resolving licensing issues and implementing group-based license assignments.
- Created Angular 4 prototypes and contributed to UI design improvements for better user interaction and experience.
- Worked on NoSQL and Microsoft Azure-based project prototypes to explore cloud-based data solutions.
- Developed SQL scripts for datasets used in generating reports through SSRS.
- Built highly flexible and user-friendly UI components and reusable functions using ASP.NET, C#, AJAX, and JavaScript...
- Developed and maintained Windows Phone applications deployed on Azure cloud technologies.
- Created service instances in Pivotal Cloud Foundry (PCF) to bind deployed applications efficiently.
- Designed and implemented custom Angular Factory services to interact with an ASP.NET Core Web API for data retrieval.
- Utilized Kubernetes and Docker as the runtime environment for the CI/CD pipeline, ensuring seamless build, testing, and deployment processes.
- Constructed RESTful web services using Entity Framework and ASP.NET Core Web API to return JSON data efficiently.
- Integrated Elasticsearch on top of SQL Server 2019 to enhance search capabilities within the application.
- Used jQuery and AJAX to enable asynchronous communication between the client and ASP.NET Core MVC controllers.
- Worked extensively with MongoDB for executing NoSQL queries.
- Recently started using GitHub Copilot for code suggestions, boilerplate generation, and unit test scaffolding in .NET Core projects to improve productivity and reduce development time.

- Worked on identifying and resolving security vulnerabilities flagged by scanning tools such as Veracode.
- Extensively used Twitter Bootstrap, Kendo UI, and jQuery chaining to create dynamic and responsive UI designs.
- Explored and integrated OpenAI GPT APIs to automate documentation generation and perform intelligent text classification for customer support systems.
- Contributed to a team project involving data preprocessing and feature engineering for a predictive analytics model using Python and SQL, integrated into a .NET web dashboard.
- Deployed and managed applications using Microsoft Azure Cloud Services, including PaaS, IaaS, and Web Apps.
- Implemented a custom exception handling class with event logging to manage exceptions across different layers.

.NET Full Stack Developer | Optum, Atlanta, Georgia, US

(May 2019 – Aug 2022)

Project description: As a .NET Full Stack Developer at Cardinal Health, I was responsible for designing, implementing, and maintaining a healthcare platform using ASP.NET Core MVC, Entity Framework, and GraphQL. I developed an interactive and responsive front end with ReactJS and Bootstrap, improving user accessibility and experience. The project leveraged REST APIs and GraphQL for efficient microservices communication, while Azure DevOps was utilized to streamline CI/CD pipelines. Additionally, I deployed the application on Azure cloud services, ensuring scalability, reliability, and seamless support for critical healthcare operations.

Responsibilities:

- Designed and developed reusable UI components in Angular 15 to enhance modularity and efficiency.
- Played a key role in migrating a web application to Angular 9, taking full responsibility for the architecture and standalone module migration.
- Implemented reusable custom pipes, directives, services, and validation controls in Angular 15 to improve maintainability and consistency.
- Proficient in UI development with an Angular Single Page Application (SPA) framework.
- Developed ASP.NET Core internet applications using MVC, Entity Framework, Web API, GraphQL, Identity Core, and OAuth, leveraging AngularJS, Angular 15 with TypeScript, ReactJS, and Bootstrap for the front-end.
- Assisted in transitioning from AngularJS to Angular 9 within the integration project and contributed to template design.
- Utilized MicroStrategy REST and .NET APIs for data extraction, transformation, and loading to support analytical reporting.
- Led web development using C# within the integration project while ensuring seamless migration and modernization of UI components.
- Designed and built UI pages and layouts using HTML5, CSS3, JavaScript, TypeScript, jQuery, Bootstrap, and Material UI.
- Actively contributed within a cross-functional, Scrum-based team focused on agile and continuous software delivery.
- Implemented Azure DevOps Services for project management, source code repositories, continuous integration, and deployment.
- Leveraged standalone components introduced in Angular 14 to improve maintainability and modularity.
- Extensive experience in designing and provisioning Virtual Machines through Infrastructure as Code (IaC) and migrating on-premises applications to the cloud using Microsoft Azure IaaS and PaaS.
- Managed Identity and Access Management (IAM) within Azure, including Azure Subscriptions, Azure AD, Azure AD Application Proxy, Azure AD Connect, and Azure AD Pass-through Authentication.
- Created reusable TypeScript components and services in Angular 12 to efficiently consume REST APIs using a component-based architecture.
- Designed and developed microservices using Java, Spring IO, Maven, MongoDB, and RabbitMQ, while implementing a CI/CD pipeline using Code Envy, Bitbucket, Nexus, and Jenkins.
- Built custom API endpoints to enable seamless data exchange between .NET applications and MicroStrategy.
- Led the design of database structures for applications using DynamoDB, a NoSQL database from AWS.
- Developed and designed user interfaces using Telerik Kendo UI, jQuery, JavaScript, JSON, AJAX, and HTML5.
- Configured and managed Azure AD Connect, Azure AD Connect Health, and Microsoft Azure Active Directory for authentication and authorization.
- Utilized Azure DevOps Services for project management, source code repository management, continuous integration, and deployment.
- Created Angular 13 components for different pages in the views, utilizing TypeScript for dynamic functionality.
- Applied Business-Driven Development (BDD) techniques using Cucumber in SpecFlow, integrating Selenium WebDriver for automated testing.

- Planned, organized, and maintained a full-stack Kubernetes environment on Google Cloud Platform (GCP) while setting up alerts and monitoring via Stackdriver.
- Designed and implemented business logic layers using Object-Oriented Programming (OOP) principles such as abstraction, encapsulation, inheritance, and polymorphism in C#.
- Worked with APIs to build multiple microservices using REST and implemented GraphQL as a middleware to connect React projects to service endpoints.
- Strong expertise in .NET Core and C#, supporting the design, development, and deployment of updates for new and existing cloud services.
- Developed prototypes for new features using Google Drive Drawing, Photoshop, HTML, XML, Sass, and React.js.
- Created an Azure Resource Group and assigned role-based access control to users using Azure Management APIs.
- Implemented ASP.NET security infrastructure to manage authentication, authorization, and other security-related tasks using VB.NET.
- Worked with NoSQL databases like MongoDB and Elasticsearch for efficient data storage and retrieval.
- Pivotal Cloud Foundry (PCF) CLI used for deploying applications and managing cloud services.
- Experienced in using GIT for source code version control, ensuring collaboration and code integrity.
- Implemented Continuous Integration and Continuous Delivery (CI/CD) pipelines using Azure Pipelines.
- Developed both unit testing and system testing scripts, integrating them into the QA process to enhance software reliability.
- Actively participated as a team player in cross-team collaborations, resolving dependencies and ensuring smooth project execution.

.NET Full Stack Developer | LPL Financial, Massachusetts, Boston,US

(oct 2016 – Apr 2019)

Project description: As a .NET Full Stack Developer, I spearheaded the modernization of a key financial platform by transitioning legacy systems to a scalable ASP.NET Core MVC architecture. I designed and developed RESTful Web APIs using Entity Framework Core to optimize data processing and enhance database interactions. On the front end, I leveraged Angular and Bootstrap to create a dynamic, responsive user interface, improving overall usability and performance

Responsibilities:

- Led the transition from the outdated Web Forms model to the more efficient and flexible MVC framework, improving development agility and streamlining the overall process.
- Designed, developed, and maintained ASP.NET MVC internet applications using MVC architecture, Entity Framework, Web API, Knockout.js, and Bootstrap for an enhanced front-end experience.
- Managed the complete software development life cycle (SDLC), including analysis, design, implementation, deployment, and maintenance of projects.
- Used Angular Template Driven forms and Modern Driven (Reactive) forms to perform form validations both on the server and client-side.
- Developed UI pages and layouts using HTML5, CSS3, JavaScript, jQuery, and Bootstrap to create responsive and visually appealing designs.
- Expertise in developing applications using .NET 4.8/4.6/4.5/4.0/3.5, MS Visual Studio, MVC 6/5/4, Razor View Engine, C#, ASP.NET, LINQ, AJAX, XML, JSON, Azure Cloud, Angular, React.js, TypeScript, and WCF services.
- Established scalable architecture, enabling seamless updates, easier maintenance, and future technology integrations.
- Implemented optimized code structures and enhanced data handling mechanisms, which significantly reduced load times and improved overall site responsiveness.
- Designed and implemented checkout flows and feature enhancements to improve user experience and streamline the purchase process.
- Involved in coding and designing using C#, ADO.NET, WCF, JavaScript, React.js, Underscore.js, jQuery, HTML, and CSS.
- Proficient in UI development while transitioning to the MVC framework using Knockout.js, creating custom templates within single-page applications.
- Developed custom .NET interfaces for MicroStrategy to optimize data access and manipulation.
- Integrated MicroStrategy BI tools into .NET applications to enhance data visualization and reporting functionality.
- Transitioned ASPX and ASCX pages to CHTML pages within the integration project, assisting in template design and layout creation.
- Utilized Knockout.js data bindings to enable real-time updates of product prices and inventory, enhancing user engagement with dynamic content.
- Implemented component registration through JavaScript files, enabling the reuse of multiple Knockout components

across the application.

- Converted pages from ASPX to ASP.NET MVC, incorporating canonical URLs to improve SEO and site performance.
- Applied several UI enhancements to the checkout and billing pages, improving usability and visual appeal.
- Established comprehensive monitoring and analytics using Azure Application Insights and Log Analytics, enabling real-time visibility into application performance and user interactions, which supported data-driven decisions to enhance user satisfaction and engagement.
- Utilized Knockout.js data binding to dynamically generate form elements that adapted to user input, optimizing the checkout process by displaying only relevant fields, minimizing errors, and improving overall usability.
- Designed and implemented a Knockout component within a modal, allowing users to view detailed item information efficiently.
- Developed business logic layers using Object-Oriented Programming (OOP) principles such as encapsulation, abstraction, inheritance, and polymorphism in C#.
- Strong expertise in .NET Core and C#, supporting the design, development, and deployment of new and existing cloud services while ensuring robust system architecture.
- Leveraged ASP.NET security infrastructure to implement user authentication, authorization, and other security mechanisms using VB.NET.
- Effectively worked with SQL Server Management Studio for database management and query execution.
- Experienced in using JetBrains UpSource for project management, source code versioning, continuous integration, and deployment.
- Proficient in front-end and back-end development using C#, VB.NET, .NET Entity Framework, JavaScript, jQuery, HTML, and CSS.
- Employed TortoiseSVN and VisualSVN for efficient source code version control and collaboration.
- Contributed to unit and system testing by developing automated scripts, which were integrated into the QA process to ensure software reliability.
- A strong team player, actively collaborating across teams to resolve dependencies and streamline development processes.

.Net Developer | Newrez LLC, Coppell, Texas, US.

(OCT 2013 – SEP 2016)

Project description: As a .NET Developer, I was involved in various stages of the software development lifecycle, focusing on developing and optimizing web applications. I implemented front-end solutions using AngularJS, NodeJS, and Kendo UI, while also building backend services with ASP.NET Core and SQL Server. My role included developing and integrating RESTful APIs to facilitate seamless data exchange. Additionally, I designed and managed ETL processes using SSIS, supported cloud deployments, and worked with NoSQL databases like MongoDB and Cassandra to improve data management and system performance.

Responsibilities:

- Designed and developed stored procedures and views to manage data operations efficiently in MS SQL Server 2008.
- Integrated Sitecore 6.0 for templates, layouts, control rendering, placeholders, and content management.
- Developed and consumed RESTful APIs using ASP.NET MVC4 Web API based on business requirements.
- Created ETL packages using SSIS to efficiently extract, transform, and load data from heterogeneous sources into a centralized database.
- Implemented authentication mechanisms for NoSQL databases through Cassandra connector scripts.
- Utilized Angular 2.0 and TypeScript to build dynamic Single Page Applications (SPA).
- Developed ASP.NET Core Web APIs based on departmental requirements and specifications.
- Worked on advanced ASP.NET Core MVC concepts, including models, providers, and filters to enhance backend functionality.
- Extensively used WCF and Web Services to implement a Service-Oriented Architecture (SOA) with SOAP and REST-based applications.
- Developed client-side code using AngularJS, Node.js, jQuery, and JavaScript to improve user interactivity.
- Used SSIS to validate, extract, transform, and load data into data warehouse and data mart databases.
- Created and implemented authentication mechanisms using Azure Active Directory (AAD) authentication libraries for .NET and JavaScript.
- Worked with Razor pages in an ASP.NET 4.5 web application built on an MVC4 architecture using C# and SQL Server 2012 as the backend.
- Monitored daily ETL loads and provided support for all scheduled batch processing jobs.

- Developed several SOAP and REST API-based internal tools to enhance the quality and performance of the existing codebase and deployed them in Cloud Foundry.
- Leveraged Telerik and Kendo UI controls for dropdowns, grids, and progress bars to enhance UI/UX.
- Created responsive front-end designs using HTML5, Bootstrap, Kendo UI, and CSS3, ensuring optimal display across desktops and tablets. Developed plugins for Microsoft Outlook 2007 to facilitate seamless data import into an existing web-based system.
- Created and maintained web content along with email templates associated with Amazon Web Services (AWS).
- Worked extensively with Team Foundation Source Control (TFS) for version control and project management.
- Hands-on experience with NoSQL databases such as RavenDB and MongoDB, with a strong passion for working on emerging NoSQL technologies.
- Provided support for MongoDB and CassandraDB, ensuring optimized database performance and reliability.
- Played a key role in migrating SQL Server databases to SQL Azure, utilizing SQL Azure Migration Wizard for seamless transitions.
- Designed and implemented jobs, packages, and reporting solutions using SQL Server Reporting Services (SSRS) and SQL Server Integration Services (SSIS).
- Developed and scheduled SSIS packages using C# for efficient data extraction and loading processes.
- Implemented services on the Windows Azure Platform to enhance cloud-based application capabilities.
- Utilized AAD Graph API to programmatically interact with Azure Active Directory through REST API endpoints.
- Created PL/SQL stored procedures, functions, and packages to fulfill business logic and application requirements.

.Net Developer | AGNES SOFTECH, HYDERABAD, INDIA

(Aug2012 – Aug 2013)

Project description: As a .NET Developer, I played a crucial role in designing and building a web-based intranet application to meet business objectives using ASP.NET, C#, and MVC 3.0. My responsibilities encompassed database design, crafting SQL scripts for data migration and report generation, and deploying the application on Azure. Additionally, I developed and exposed web services using WCF, created dynamic UI components with AngularJS, and leveraged AJAX, jQuery, and ADO.NET to enhance user interactions. I also managed cloud deployment, maintained the existing Azure infrastructure, and ensured seamless production support while following Agile methodologies for efficient software delivery.

Responsibilities:

- Designed and developed ASP.NET MVC-based applications using Visual Studio 2013, leveraging C#.NET, ADO.NET, and MVC 3.0.
- Created and exposed web services using WCF architecture to enable seamless data exchange for clients.
- Developed web applications utilizing Web Services through ASP.NET Web API.
- Implemented AJAX controls like Script Manager and Update Panel to enhance the user experience with dynamic interactions.
- Developed UI pages and layouts using AngularJS to create a responsive and interactive front end.
- Used jQuery for client-side validations, making asynchronous calls to WCF services, and invoking controller actions.
- Designed and developed databases by creating tables, stored procedures, views, indexes, and relationships.
- Wrote complex SQL scripts to retrieve data for reporting and migrating data from multiple sources using SSIS.
- Designed SQL scripts for dataset generation to support report creation in SSRS.
- Worked on deploying and managing cloud-based applications using Microsoft Azure, ensuring optimal performance and scalability.
- Converted .NET applications into Microsoft Azure Cloud Service Projects as part of the cloud deployment strategy.
- Developed a mini project using the .NET framework, C#, and MongoDB to facilitate team logging and management.
- Strong expertise in SQL and PL/SQL, including backend programming and creating database objects like stored procedures, triggers, functions, cursors, and packages.
- Wrote event-driven code in C# using server controls such as Data Grid and Data List.
- Ensured data integrity and efficient retrieval by implementing stored procedures and user-defined functions using T-SQL and PL/SQL.
- Integrated JavaScript, XML, and web services into .NET applications for enhanced functionality.
- Used ASP.NET validation controls and implemented client-side validations through JavaScript.
- Maintained an existing cloud infrastructure on Microsoft Azure, ensuring efficiency and reliability.
- Followed Agile methodology (Scrum framework) to ensure timely and high-quality deliverables.
- Actively involved in software development and production support within the trading environment, quickly adapting to equity trading flows.
- Managed version control and collaborative development using Team Foundation Server (TFS) while also generating

reports with SQL Server Reporting Services (SSRS).

- Took direct responsibility for various aspects of product design, including assessment, coding, testing, and optimization.
-
