Professional Summary

- Results-driven Power BI Developer with 9+ years of experience in data visualization, reporting, and business intelligence.
- Expertise in Power BI, SQL, Tableau, Star Schema with a strong understanding of front-end reporting design, data modeling, and analytics.
- Expertise in enterprise data modeling, advanced analytics, and high-level reporting.
- Proficient in requirements analysis, self-service BI, and data integration using Power BI, SQL, and ETL frameworks.
- Experienced in software development, implementation, and application support & maintenance.
- Proven ability to identify actionable insights and communicate findings effectively to stakeholders
- Seeking a role to apply extensive Power BI expertise, contributing to informed decision-making and optimizing business processes for organizations
- Adept at transforming complex datasets into actionable insights that drive business growth.

Projects

- Car Rental Fleet Management Analytics: Constructed a comprehensive suite of analytical tools within Power BI to track invoicing trends across 200+ vehicle rentals monthly; optimized ETL processes resulting in streamlined financial audits with zero discrepancies reported
- Financial Reporting for Car Rental Payments: Established automated Power BI reports for tracking payment processes, including receipts, refunds, and credit/debit notes, using SQL queries and ETL pipelines to reduce financial discrepancies by 15%
- ERP System Analytics and Reporting: Devised Power BI dashboards for ERP systems, visualizing key performance indicators across procurement, inventory, sales, and financial operations, leveraging SQL for data extraction and ETL processes for data integration and reporting
- CRM System Analytics and Reporting: Formulated Power BI dashboards for CRM systems, analyzing customer interactions, sales performance, and service metrics, using SQL and ETL processes to integrate data from multiple CRM modules for insightful reporting
- Data Security and Governance in ERP and CRM Analytics: Enhanced ERP and CRM data models by integrating user-specific security layers, ensuring sensitive information protection, and applying SQL-based ETL processes for data transformation and compliance with privacy standards
- SDLC Leadership and Cross-Functional Collaboration: Led all phases of the SDLC (analysis, design, development, and testing) while collaborating with cross-functional teams, ensuring clear and concise documentation that reduced the onboarding time from three weeks to two, enhancing team productivity and client satisfaction
- UAT/Production Test Support and Documentation: Orchestrated comprehensive UAT and production test support documentation, providing clear guidelines for test execution. Actively participated in project meetings to discuss testing strategies and ensure alignment with project timelines, resulting in on-time and successful deliverables
- Prototyping and Requirement Analysis: Conducted requirement analysis sessions and created prototypes to streamline the development and testing phases. Aligned solutions closely with business goals and delivered prototypes that Controlled overall development time by 30%
- SQL and RDBMS Proficiency for Data Transformation: Formulated and optimized SQL queries transformation, supporting Power BI reporting. Created custom SQL reports in collaboration with end-users to meet ad hoc data requests, achieving a high satisfaction rating due to report relevance and responsiveness
- End-to-End Management of Data Analytics Solutions: Directed comprehensive management of data analytics solutions across all SDLC phases for Power BI projects, ensuring thorough documentation and adherence to business requirements, leading to a 40% reduction in deployment time.

- Financial Data Integration: Monitored finance-related data flows from SQL databases to Oracle for daily and weekly transactions, ensuring smooth data integration for reporting accuracy in areas such as invoices, payments, and receipts

Technical Skills

- Data Analytics & Visualization: Power BI, Tableau, DAX, Power Query, Power BI Service, SSIS
- Database & Cloud: SQL Server, T-SQL
- ETL: Data Warehousing, Data Modeling, Data Transformation, Performance Optimization, data blending
- Project Management: Jira, Agile, Waterfall, Excel, SharePoint
- Industry: ERP, Finance, Transportation, CRM, Fleet Management

Certification

- Microsoft certified: PL-300 Power BI Data Analyst Associate

Professional Experience

Europcar Mobility Car Rental W.L.L, Doha, Qatar
Senior Power BI Developer

Feb 2019 - Jun 2023

Responsibilities

- Crafted real-time Power BI dashboards and reports linked with SQL DB enabling collaborative data-driven decision-making and 20% improvement in understanding pattern and requirement
- Collaborated with project managers, engineers, and stakeholders to gather and define business requirements, ensuring 100% data accuracy in all reports, resulting in a 25% improvement in operational effectiveness
- Designed data models, ETL processes, and reporting solutions using BI tools, optimizing Power BI data integration to reduce processing time by 25%. Enhanced measures, KPIs, and visualizations using SSIS for improved performance and insights
- Implemented CI/CD pipelines for Power BI using Azure DevOps, automating deployment processes, version control, and testing to ensure seamless updates, improved collaboration, and reduced deployment time by 30%
- Developed automated ETL solutions using Power Query to extract, transform, and load data from multiple business modules including Sales, Purchase, Inventory, Operations, Customer, Invoice Billing ensuring efficient data processing and integration
- Leveraged Excel and DAX & dimensional modelling techniques to optimize data management and transformation workflows, enabling high-performance data retrieval and the creation of complex visualizations that delivered actionable business insights and improved operational efficiency
- Optimized SQL queries for improved reporting performance in Power BI and Tableau.
- Conducted user training and knowledge sharing sessions to enhance business adoption of BI solutions.
- Executed writing and optimizing SQL queries, designing scalable tables, views, stored procedures, and indexing strategies, improving query performance by 40% to enhance data processing and support real-time analytics
- Expertise in Python (Pandas, NumPy) for building end-to-end data pipelines, performing exploratory data analysis (EDA), and developing predictive models.

Tasheelat Car Leasing W.L.L, Manama, Bahrain
Power BI Developer

Aug 2018 - Jan 2019

Responsibilities

- Enforced data governance and security best practices in Power BI, enhancing compliance with data privacy regulations by 30% and improving access control efficiency through optimized row-level security (RLS) and user role definitions.
- Developed and maintained Power BI and Tableau reports for enterprise-wide analytics.
- Implemented ETL workflows in SSIS for data transformation.

- Deployed interactive Power BI dashboards with drill-down and drop-down options, leveraging measures, calculated columns, KPIs, and table calculations to enhance user experience and reporting capabilities while optimizing existing reports to support business needs
- Proficiency in technical business analysis, system administration, and software development within project and change management systems, streamlining processes by 30%, improving system performance by 25%, and enabling data- driven insights through sophisticated reporting and automation
- Designed data models and optimized queries for improved reporting performance.
- Collaborated with stakeholders to define KPIs and reporting requirements.
- Published Power BI reports and dashboards for web and mobile platforms, ensuring accessibility across devices while collaborating with product management and web teams to align database structures and standardization requirement

Europcar, Universal Rent a car, Abu Dhabi, UAE
Power BI Developer

Jun 2017 - Jul 2018

Responsibilities

- Spearheaded advanced Power BI visualizations, including bar graphs, line charts, pie charts, Tree maps, Bubble Charts, Waterfall Chart, using calculated sets and dynamic data models to deliver actionable insights.
- Applied advanced sorting, grouping, and filtering techniques in Power BI to analyze data across multiple dimensions, ensuring comprehensive insights and streamlined reporting for stakeholders
- Built custom reports using Power BI and SQL-based reporting tools.
- Analyzed large datasets and provided insights to support business decisions.
- Assisted in migrating on-prem data warehouses to Snowflake and Azure.
- Built dynamic, interactive Power BI dashboards and generated ad-hoc reports by integrating multiple data sources, empowering users with timely insights
- Highly proficient in optimizing SQL queries to enhance performance and streamline data retrieval processes, ensuring efficient handling of large datasets

Seven Stars Rent a car– Dubai, Dubai, UAE
Business Analyst

Oct 2013 - Jan 2017

Responsibilities

- Conducted thorough analysis of legacy data to identify mapping requirements, ensuring alignment with business needs and technical standards. Documented specifications to support data migration and system integration initiatives
- Maintained and managed detailed project documentation, including Business Requirement Documents (BRDs) and user stories, facilitating efficient project execution and lifecycle management within the SDLC framework
- Managed comprehensive end-to-end testing processes, encompassing functional, integration, and performance testing, to validate application functionality and ensure 100% alignment with client specifications

Education

- Bachelor of Engineering in Electronics and Electronics Engineering, from Kanchi Pallavan Engineering College, Kanchipuram, India, May 2012
