

Nabin Shrestha

Fort Worth, Texas

Email: shresthanabin302@gmail.com

Phone number: (551) 866-0556

Professional Summary:

I am a full-stack developer with over 8 years of experience in the tech industry. I specialize in building dynamic web applications and microservices using technologies like Java, Spring Boot, and Angular. With a strong background in both front-end and back-end development, I excel at creating scalable solutions, optimizing performance, and implementing secure, efficient systems. I have hands-on experience with CI/CD pipelines, cloud technologies like AWS, and real-time data processing tools like Kafka. I am passionate about collaborating in Agile environments and continuously improving the software development process.

Professional Experience:

Client: Benecard, Lawrenceville, NJ

Duration: February 2022 - Present

Role: Java Developer, Program Analyst, Middleware Engineer

Responsibilities:

- Developed RESTful APIs using **Spring Boot**, facilitating seamless integration between front-end and back-end systems, ensuring efficient data flow and interaction.
- Implemented data persistence and retrieval using Hibernate ORM with **MySQL**, **PostgreSQL**, and **DB2** databases, optimizing data access efficiency by 25%.
- Collaborated with cross-functional teams to design and implement **microservices** architecture using Spring Boot, enhancing application scalability and performance.
- Integrated security measures such as **OAuth2** and **JWT** for robust authentication and authorization within the application.
- Implemented CI/CD pipelines using **Jenkins** and **Docker**, automating the build, test, and deployment process, reducing release cycles by 30%.
- Utilized **Kubernetes** for container orchestration, ensuring efficient deployment and scaling of applications.
- Integrated **MongoDB** for **NoSQL** data storage, optimizing performance and scalability for high-volume data processing.
- Applied **Agile** methodology practices, participating in daily stand-ups, sprint planning, and retrospective meetings to enhance team collaboration and productivity.
- Developed dynamic web applications using **Angular 12**, **JSP**, and **Servlets**, enhancing user interaction and functionality.
- Conducted unit and integration testing using **JUnit** and **Mockito**, ensuring code quality and reliability.
- Implemented **Swagger/OpenAPI** for comprehensive API documentation, enhancing collaboration between development and QA teams.
- Managed version control using **GitLab** and **SVN**, facilitating collaboration across development teams and managing code branches effectively.
- Developed and implemented a comprehensive monitoring and alerting framework using **Prometheus** and **Grafana**, enabling real-time performance tracking and proactive issue detection to ensure high availability, reliability, and optimal performance.
- Utilized Google Cloud Platform (**GCP**) for deploying and managing cloud-based applications, ensuring high availability and scalability.
- Employed **Docker** for containerization and **Kubernetes** for orchestration, managing deployment, scaling, and operations of microservices.

Environment: Java (1.7 & 1.8), Java 11, J2EE, RESTful Web Services, Spring, Spring Boot, Microservices, JPA, SQL, Apache Tomcat, Agile Methodology, Maven, JUnit, Mockito, Jenkins, CI/CD, SVN, Eclipse, JSON, JSP, Servlets, Spring JDBC, MongoDB, PostgreSQL, MySQL, DB2, Docker, Kubernetes, Angular 12, GCP, GitLab, Swagger.

Client: Benefitfocus, Charleston, SC

Duration: November 2019 - November 2021

Role: Full Stack Developer

Responsibilities:

- Developed RESTful APIs using **Spring Boot** and **Node.js**, enabling seamless integration with dynamic front-end applications for efficient data handling and interaction.
- Implemented data persistence and retrieval using **Hibernate ORM** with **MySQL** and **PostgreSQL** databases, optimizing data access and performance.
- Designed and developed dynamic single-page applications (SPAs) using **AngularJS**, **Angular 4**, and **Angular 9**, leveraging components, directives, and services to enhance user experience and reusability.
- Implemented state management solutions using **Redux** and **Context API**, enabling efficient front-end data handling and reducing component re-renders.
- Developed high-performance, concurrent systems in **Go** by leveraging advanced features like **goroutines** and **channels**, optimizing scalability and efficiency for high-load environments.
- Automated the finance billing file process by developing **Perl** and **Shell scripts**, streamlining the generation and delivery of billing files to the finance team.
- Architected and deployed **microservices**-based applications using **Docker** and **AWS EC2**, ensuring high availability and scalability of services.
- Implemented CI/CD pipelines using **Jenkins** and integrated with **Docker** and **AWS**, automating build, test, and deployment processes to reduce release cycles.
- Architected microservices in **Go**, leveraging **Docker** and **Kubernetes** for scalable deployments and seamless service orchestration.
- Leveraged AWS services such as **Lambda**, **EC2**, **S3**, **DynamoDB**, **IAM**, **RDS**, and **CloudFormation** using Terraform to develop and deploy scalable cloud-based solutions.
- Utilized **Kafka** for building producer and consumer applications, enhancing real-time data processing capabilities within **microservices** architectures.
- Designed and implemented security measures using **OAuth2** and **JWT** for secure authentication and authorization in web applications.
- Developed comprehensive test suites using **Go's** testing package and popular frameworks like **Testify** to ensure code reliability and functionality.
- Conducted unit, integration, and end-to-end testing using **JUnit**, **Mockito**, **Mocha**, and **Jasmine** to ensure code quality, reliability, and performance.
- Integrated **OpenTelemetry** and **OpenTracing** into microservices architecture to capture process, and export trace data, enhancing visibility into system performance and reducing debugging time.
- Deployed **Zipkin** as a distributed tracing system to capture, store, and visualize trace data from microservices, improving observability and fault isolation.
- Employed **Agile** methodology practices, participating in daily stand-ups, sprint planning, and retrospectives to enhance team collaboration and productivity.
- Developed server-side applications using the **Express.js** framework, ensuring efficient data handling and real-time updates.
- Utilized **Elasticsearch** for data aggregation and analytics, enhancing backend services' performance and functionality.

Environment: Java (1.7 & 1.8), Go, RESTful Web Services, Spring, Spring Boot, Microservices, Hibernate, JPA, MySQL, PostgreSQL, Docker, Kubernetes, AWS (EC2, S3, Lambda, DynamoDB, CloudFormation), Terraform, AngularJS, Angular 4, Angular 12, Jenkins, CI/CD, GitLab, Perl, Shell Scripts, Node.js, Express.js, Kafka, JUnit, Mockito, Mocha, Jasmine, Agile Methodology, Elasticsearch.

Client: Lincoln Heritage, Phoenix, AZ

Duration: April 2016 - August 2019

Role: Java/Go Developer

Responsibilities:

- Implemented various **J2EE** Design Patterns such as MVC, DAO, Business Delegate, and Transfer Object to ensure robust and maintainable code architecture.
- Actively participated in all phases of the **SDLC**, including analysis, design, development, system testing, and user acceptance testing, while successfully following Agile Scrum methodology.
- Developed dynamic **single-page applications** using the **MEAN** stack (Angular 4.0, HTML5, CSS3, Bootstrap), leveraging **Microservices** Oriented Architecture for enhanced scalability and performance.
- Designed and implemented robust backend systems using **Go**, focusing on clean architecture principles to ensure modularity and testability.
- Developed microservices in **Go**, deploying them in **Docker** and orchestrating with **Kubernetes** to ensure scalability and seamless service integration.
- Conducted unit and integration testing using **JUnit**, **Mockito**, and **Go's** testing packages like Testify to ensure code quality, performance, and reliability.
- Optimized application performance by implementing custom middleware in **Go**, using interceptors and context propagation mechanisms to enhance logging, request validation, rate limiting, and error handling across **microservices**.
- Extensively utilized **Java 8** features, including streams, lambda functions, predicates, functional interfaces, method references, filters, collections, and default methods to write efficient and clean code.
- Designed and implemented **OAuth2** integration on **RESTful APIs** using **JWT** tokens to generate refresh tokens, access tokens, and authorization codes, ensuring secure authentication and authorization.
- Developed **microservices** using **Spring Boot**, **Spring Core/IOC**, **Spring AOP**, **Spring ORM**, and **Spring Batch**, incorporating Spring Security for authentication and authorization.
- Implemented RESTful web services using **Spring MVC** and **Spring Annotations**, simplifying business logic and enhancing the application's modularity.
- Deployed **Spring Boot**-based microservices in **Docker** containers to **Amazon ECS** through the **AWS admin** console, ensuring high availability and scalability.
- Leveraged **AWS services**, including **Route53**, **CloudFront**, **S3**, **Elastic Beanstalk**, **ELB**, **RDS**, **AWS Aurora**, **VPC**, and **IAM**, to design and deploy highly available, fault-tolerant, and auto-scaling applications.
- Implemented CI/CD pipelines using **Jenkins**, integrating **Maven**, **Nexus**, **Bitbucket**, and **Docker** for seamless build, test, and deployment processes, and ensured efficient test-driven development using **JUnit** and **Mockito**.

Environments: Java 8, Go, RESTful Web Services, Spring Boot, Microservices, Angular 4.0, HTML5, CSS3, Bootstrap, OAuth2, JWT, Spring MVC, Spring Core/IOC, Spring AOP, Spring ORM, Spring Batch, Spring Security, Docker, AWS (Route53, CloudFront, S3, Elastic Beanstalk, ELB, RDS, Aurora, VPC, IAM), Apache, Jenkins, Maven, Nexus, Bitbucket, JUnit, Mockito.

Education:

Bachelors in computer science, The University of Texas at Arlington, TX
