SUMMARY

Detail-oriented **Java developer and Full stack engineer** with **4+ years** of hands-on experience delivering **robust, scalable applications** across the **insurance** and **healthcare** domains. Proven success in building cloud-native microservices using **Java**, **Spring Boot**, and **AWS**, with strong capabilities in **React.js**, **Apache Kafka**, and containerized deployments using **Docker** and **Kubernetes**. Skilled in implementing secure **RESTful APIs**, **CI/CD pipelines**, and event-driven architectures to drive high-availability systems. Experienced in Agile environments with a focus on automation, performance optimization, and compliance (**HIPAA**). Passionate about crafting clean, efficient code aligned with business goals and industry best practices.

SKILLS

Programming Languages:	Java (8+), Python, JavaScript (ES6+), TypeScript, SQL
Backend & Frameworks:	Spring Boot, Spring MVC, Hibernate, Node.js (basic), RESTful API Design
Frontend & Technologies:	React.js, Redux, HTML5, CSS3
Cloud & DevOps:	AWS (EC2, RDS, S3, Lambda, API Gateway), Docker, Kubernetes, Jenkins, Terraform, GitHub Actions, CI/CD Pipelines
Messaging & Integration:	Apache Kafka, Kafka Streams, OAuth2, JWT, REST APIs
Databases & Caching:	PostgreSQL, MySQL, MongoDB, Redis
Testing & Code Quality:	JUnit, Mockito, SonarQube, Postman
Tools & Workflow:	Git (GitHub, GitLab), JIRA, Confluence, IntelliJ IDEA, VS Code

EXPERIENCE

Software Development Engineer

| Jun 2024 – TILL DATE

Cigna Inc., USA

- Designed and deployed **scalable microservices** in **Java** and **Spring Boot**, reducing backend response times by **20%** across insurance claim workflows.
- Implemented secure, token-based authentication using **JWT** and **OAuth2**, enhancing data protection compliance and reducing unauthorized access incidents by **27%**.
- Built real-time analytics dashboards using **React.js** and **AWS Lambda**, improving stakeholder visibility into **KPIs** and reducing reporting delays by **32%**.
- Automated infrastructure provisioning with **Terraform**, cutting manual deployment time by **65%** and eliminating configuration drift across dev environments.
- Refactored legacy **API** endpoints into **RESTful** services, decreasing codebase complexity and reducing maintenance overhead by **18%**.
- Conducted performance tuning across **Kafka** consumers and producers, increasing message throughput by **25%** and minimizing processing latency under load.

Software Developer

| SEPT 2020 – JUL 2023

Tata Consultancy Services, India

- Developed **RESTful** services using **Spring Boot** and **Hibernate** to support high-traffic insurance applications, improving system scalability and uptime.
- Created dynamic frontend components with **React.js** and **Redux**, enhancing user experience and increasing customer satisfaction scores by **18%**.
- Designed and integrated robust **CI/CD pipelines** using **Jenkins**, **GitHub Actions**, and **SonarQube**, leading to a **32%** reduction in manual deployment errors and improved code quality metrics.
- Participated in **Agile** sprint planning, standups, and retrospectives, collaborating with cross-functional teams to ensure timely delivery of features and reducing sprint rollover by **25%**.
- Tuned and optimized complex **SQL** queries in **PostgreSQL** and **MongoDB**, improving data processing speed for reporting modules by **22%** and reducing query execution time from seconds to milliseconds.

- Developed comprehensive unit, integration, and regression test suites using **JUnit** and **Mockito**, achieving over **73%** test coverage and reducing post-release defects by **18%**.
- Architected and deployed a Redis-based caching mechanism for real-time session and metadata storage, which reduced server load by **20%** and enhanced application responsiveness during peak traffic.
- Collaborated with senior engineers to modernize a monolithic system into a **Dockerized microservices architecture**, enhancing modularity and deployment flexibility.

EDUCATION

Master of Science in Computer Science

Auburn University, USA

Aug 2023 - May 2025

Bachelors of Engineering in Electronics

Sreenidhi Institute of Science and Technology, India

Jun 2019 – Jun 2022

ACADEMIC PROJECT

Cloud-Based Insurance Claims Automation Platform

- Built a **microservices**-based **insurance** claims system using **Java (Spring Boot)**, **Kafka**, and **React.js**, simulating real-time claim intake, document validation, and status tracking with **JWT**-based access control.
- Deployed services on **AWS (EC2, RDS, S3)** with **Docker** and automated **CI/CD** via **GitHub Actions**, reducing manual deployment overhead and improving system scalability under load testing by **28%**
