

Naveen Reddy Ailuri

Java Full Stack Developer

469-482-0314 | anaveenreddy2405@gmail.com | TX-75038

SUMMARY

- Java Full Stack Developer with 3+ years of experience driving projects through the entire SDLC. Skilled in design, development, implementation, and deployment, ensuring seamless integration across front-end and back-end for successful project completion.
- Expert in various Spring modules like Spring Boot, Spring REST, Spring JPA, and Spring Cloud, facilitating rapid development and integration of enterprise applications.
- Excellent in Database development using MySQL, SQL Server, and NoSQL databases using MongoDB in various projects with expertise in deploying Stored Procedures, Triggers, and SQL Queries.
- Proficient in CI/CD pipelines using tools like Jenkins and AWS Code Pipeline and a strong understanding of API development and integration to high-quality software solutions that meet business objectives.

EDUCATION

Masters in Computer Science and Information Sciences May 2024

University of Texas, Arlington, Texas

Bachelors in Computer Science and Engineering May 2022

Vel Tech Rangarajan Dr.Sagunthala R&D Institute of Science and Technology, Tamil Nadu, India

SKILLS

Methodologies: SDLC, Agile/Scrum, Kibana

Languages: C, C++, Java, SQL, JavaScript, TypeScript

Frameworks/Libraries: Spring Boot, Spring MVC, Spring REST, Spring Security, React.JS, Angular.js, Next.js, Express.js, OAuth 2.0

Web Technologies: HTML5, CSS3, jQuery, Ajax, XML, Redux, REST API

Testing: Postman, JUnit, Mockito, React Testing Library

Cloud: AWS (EC2, SQS, SNS, Elastic Beanstalk, Lambda, Code Deploy, CloudWatch), Azure

Database: MySQL, PostgreSQL, MongoDB, DynamoDB

Tools: Git, GitHub, Bitbucket, Jenkins, Docker, Kubernetes, GraphQL, Grafana, RabbitMQ, Swagger UI, JWT

EXPERIENCE

Berkshire Hathaway, USA Jan 2024 – Present

Java Full Stack Developer

- Spearheaded the optimization of React components by implementing memoization and lazy loading, resulting in a 50% reduction in page load time. This helped retain users and boosted application performance on mobile devices.
- Constructed a robust data layer using Spring Data JPA, reducing database query execution time and increasing data retrieval efficiency through optimized queries, caching strategies, and efficient data fetching techniques.
- Streamlined security implementation by integrating Spring Security into the development process, resulting in a 20% reduction in development time for security-related features and overall development efficiency.
- Integrated MongoDB with Spring Boot applications for seamless data flow and achieved a 35% reduction in data read/write latencies by leveraging efficient query structures and aggregation pipelines.
- Crafted and maintained well-documented GraphQL APIs with clear and concise schema definitions, improving the developer experience and reducing integration time for frontend and applications by 60%.
- Improved code maintainability and testability by mocking dependencies with Mockito in various Java services, leading to a 40% reduction in time spent on integration testing.

Streebo Inc, India May 2020 – Jul 2022

Java Full Stack Developer

- Enhanced code maintainability and streamlined development by crafting custom React hooks, effectively encapsulating complex DOM logic for seamless reuse across multiple components.
- Designed and developed responsive, user-friendly web interfaces using HTML, CSS, and modern UI/UX principles, improving page load speed by 35% and enhancing user engagement by 40% through intuitive layouts and optimized styling.
- Built a RESTful API with endpoints using Spring MVC/Spring WebFlux, providing a clean and well-defined interface for data access.
- Developed and maintained Spring Boot-based microservices to enhance system scalability, resulting in a 50% increase in the application's ability to handle concurrent users and a reduction in average response time.
- Employed CI/CD pipelines with Docker, enabling automated builds and deployments, and reducing production deployment errors.
- Designed and implemented OAuth2.0 authentication flows using Spring Security and Keycloak, securing access for 100K+ users across multiple microservices. Integrated role-based access control (RBAC), token-based authentication, and Single Sign-On (SSO) reduce unauthorized access incidents by 85% while improving security and scalability.
- Automated infrastructure provisioning and management using AWS CloudFormation, reducing manual configuration errors by 50% and improving deployment efficiency.
- Streamlined test-driven development (TDD) within Agile sprints, increasing code quality and reducing defects in production by 18% through continuous testing and integration.
