EDUCATION

Northeastern University, Boston, MA

Sep 2023 - Aug 2025

Master of Science in Computer Software Engineering

TECHNICAL SKILLS

Frontend: JavaScript (ES6+), TypeScript, React.js, Redux, HTML5, CSS3, Material-UI

Backend & AI: Node.js, Java, REST APIs, PostgreSQL, MongoDB, LLM Integration, RAG, Transformers

Tools & Core CS: Git, Agile/Scrum, Jira, CI/CD, Data Structures, Algorithms, Object-oriented programming

PROFESSIONAL EXPERIENCE

Software Front-end Engineer CO-OP - Dassault Systemes, Waltham, MA

Jul 2024 - Jan 2025

- Revamped dataset load times from over **2 minutes to under 15 seconds** by refactoring 1,000+ lines of legacy React code using asynchronous batching and optimized state management
- Unified Gantt and tabular scheduling views into a single modular **React Web UX** component, eliminating redundant code and improving developer workflow by 30%
- Engineered API latency from 200ms to 100ms by building and integrating real-time CRUD **RESTful APIs** with **GraphQL** support, leveraging server-side caching and Postman regression tests to ensure milestone delivery

Frontend Engineer - Brillio Technologies

Apr 2022 - Jun 2023

- Minimized clinical trial tracking errors by 20% across 10+ sites by developing a centralized **react** monitoring dashboard integrating real-time **API** data and **distributed systems** architecture
- Accelerated **feature rollout** by 25% and reduced redundant code by 30% by creating and documenting a reusable React component library adopted across all projects
- Elevated team productivity by 15% by automating **Jest** testing suites and mentoring three junior developers in **computer science** and software engineering best practices, reducing average issue resolution time to under 4 hours
- Mitigated platform downtime from **20 to 13 hours** per month by implementing robust client-side caching strategies for high-traffic resilience

Software Engineer - Accenture

Dec 2020 - Mar 2022

- Enhanced checkout success rate from 70% to 95% by optimizing React rendering and restructuring **asynchronous workflows** within a **micro services** architecture to improve transaction reliability
- Optimized payment latency from 5s to under 2s by architecting high-performance React checkout flows with memoization and **lazy loading**, enhancing experience for 10,000+ daily active users
- Streamlined release cadence from 2 to 3 cycles/month by implementing and managing **CI/CD** pipelines, accelerating new feature delivery

PROJECTS

Food Ordering Application - React.js, Firebase, Redux Toolkit

[Link](#)

- Developed a real-time food ordering app using React.js, Firebase, and **Redux** Toolkit, reducing kitchen delays by 35% through real-time order tracking, cross-device state synchronization, and session management optimization.

Peter Lynch Investment Bot - Python, Hugging Face Transformers, RAG, ML

[Link](#)

- Built an AI-powered investment chatbot using Python, Hugging Face Transformers, and **RAG**, reducing research time by 60% by integrating live market data and LLM outputs with financial APIs for accurate recommendations.

Rental Marketplace Platform - React, Node.js, Redux, MongoDB

[Link](#)

- Engineered a **full-stack** rental marketplace platform using React, Redux, and MongoDB, improving search performance by 40% through multi-attribute filtering and optimized state management for a responsive, mobile UE.

LEADERSHIP & ACTIVITIES

- Led and coordinated a 10-member organizing team for a university cultural festival, securing corporate sponsorships and achieving record student participation with more than 500 attendees.
- Organized and delivered peer-to-peer technical workshops on React, Git, and Agile methodologies for over 50 students, fostering a collaborative engineering learning culture.

ADDITIONAL INFORMATION

Visa Status: F-1 OPT, requiring no sponsorship.
