☎ 469-943-3601 📍 Boston, MA ✉ parthx.sabhadiya@gmail.com 🌐 parth-sabhadiya

Education

The University of Texas at Dallas, Texas

Sep 2021 – May 2023

Master of Science in Computer Science

CGPA: 3.61/4

Technical Skills

Languages: Java, Rust, Python, C/C++, Go, Scala, JavaScript, TypeScript, HTML, CSS
Frameworks/Libraries: Terraform/Terragrunt, React, Django, Node.js, Express.js, REST, PyTorch, Selenium
Tools: Kubernetes, Helm, Docker, CI/CD, Linux, AWS, Github AI CoPilot, Azure, ArgoCD, Dynatrace, Wiz, Lacework, SonarQube, CrowdStrike, Snyk, Port,
Certification: Certified Kubernetes Application Developer(CKAD), AWS Cloud Practitioner

Experience

Imprivata Inc.(Thoma Bravo)

July 2023 – Current

Software Engineer(DevOps)

Waltham, MA

- **Developed scalable data ingestion pipelines** by streaming Kafka topics into AWS S3 with Iceberg table format, enabling Athena + QuickSight analytics and reducing cloud data warehouse costs by **\$40K annually**.
- **Orchestrated distributed backend services and release pipelines** with GitHub Actions/Azure shared libraries in Python/YAML, standardizing deployments across teams and cutting release effort by **20%..**
- **Provisioned fault-tolerant infrastructure for large-scale workloads** using AWS EKS (1.28 → 1.31), Terraform IaC, and Istio service mesh; optimized multi-region deployments for disaster recovery, blue/green traffic flips, and cost-efficient scaling.

Hitachi Energy USA Inc.

May 2022 – July 2023

Software Engineer Intern

Houston, TX

- Used **SonarQube** to find and fix issues in **C#, Java, C++, and SQL** code, improving security and code quality by **20%**.
- **Developed** billing APIs using Node.js, MongoDB, SnowflakeDB, and AWS to streamline the storage and retrieval of billing reports, reducing computation costs and offering a debugging tool for auto-generated bills.

Diversity Infotech

Jan 2020 – July 2021

Software Engineer

Surat, GJ

- **Designed and implemented scalable RESTful APIs** in Java/Spring Boot, improving data retrieval speed by **30%** and supporting thousands of daily active users.
- **Optimized SQL queries and caching strategies**, reducing backend response time from **1.2s to 400ms**, which enhanced overall application performance.
- **Built automated unit and integration test suites** (JUnit, Mockito, Postman) to achieve **85%+ code coverage**, ensuring reliability and reducing production bugs by **40%**.

Projects

Distributed KV & MapReduce Engine (*Java, Raft, MapReduce, Sharding*)

- Implemented a RAFT-based replicated key-value store with crash recovery and strong consistency for distributed workloads.
- Engineered a fault-tolerant MapReduce framework with sharding and dynamic reconfiguration for scalable, high-availability computation.

Credit Card Management System (*Rust, Actix Web, PostgreSQL, Diesel ORM*)

- Engineered a full-stack backend in Rust with Actix Web to manage the end-to-end lifecycle of customer credit cards, emphasizing type-safe, high-performance server-side logic.
- Implemented features like card verification, statement generation, transaction summaries, and secure payments with optimized database operations using Diesel ORM and PostgreSQL.

TutorIT – Online Tutor Platform (*Java, Spring Boot, MongoDB, REST APIs*)

- Designed a scalable backend in Java using Spring Boot for an online tutoring platform supporting bookings, scheduling, tutor ratings, and session management.
- Integrated MongoDB for flexible NoSQL storage and developed REST APIs for reliable communication between frontend and backend, ensuring maintainable and high-availability services.
