Glen Allen, VA | (309) 750-3374 | poornima.sridhar1@gmail.com | [Linkedin.com/in/poornima-sridhar](https://www.linkedin.com/in/poornima-sridhar) | [Credly Profile](#)

AI & Cloud Solution Architect with extensive experience designing, developing, and implementing advanced AI-driven solutions and cloud architectures for large-scale enterprise systems. Expert in leveraging AI, machine learning, and cloud platforms (AWS, Azure, Google Cloud) to optimize business processes, enhance operational efficiencies, and drive innovation. Led cross-functional teams, managed full project lifecycles, and aligned AI strategies with business objectives to drive measurable outcomes. Known for transforming business challenges into technical solutions that automate processes, unlock actionable insights, and support digital transformation.

Core Competencies

AI & Machine Learning Architecture • Cloud Computing • Data Engineering & Integration • AI Model Optimization • Business Strategy Alignment • Scalable Solution Design • Cross-Functional Team Leadership • Data Analytics • Scalable Systems Development • Workflow Automation • Model Deployment & Maintenance • Technical Documentation • Agile Methodologies • Stakeholder Engagement • Performance Tuning • Risk Assessment & Mitigation • Data Governance & Security

Key Highlights

- Achieved substantial cost savings for a major insurance account and widespread platform adoption by building a Python SDK that streamlined DB2 connections on AWS, resolving critical technical challenges.
- Improved machine learning model accuracy on a banking solution project by performing data annotation using IBM Watson Knowledge Studio.
- Built and deployed blockchain solutions for high-profile clients, including the National Health Service (UK), Varys (Germany), and the Food Standards Agency (FSA).
- Engineered an AI-powered solution to detect PHI/PII data across client accounts, ensuring industry-leading accuracy in data tagging and minimizing manual intervention.

Professional Experience

IBM • Richmond, VA

May 2019 – Present

Application Architect

Delivered scalable solutions by leading design, architecture, and resource management across data warehouse development, QA, and production support with cross-functional teams. Drove innovation by translating business fundamentals like ROI, CBA, and TCO into technology strategies aligned with evolving industry trends, including CI/CD, IoT, and Predictive Analytics. Enabled scalable network management and deployment by facilitating the development of containerized solutions with Docker and Kubernetes. Developed an automated ETL framework for cloud-based big data platforms using Python, Apache Spark, and Scala, ensuring efficient deployment and performance tuning.

- Improved scalability, performance, and cost-effectiveness of cloud infrastructure through implementation of security and compliance frameworks for AWS and GCP platforms.
- Fostered customer success by cultivating strong relationships with decision-makers, delivering technical guidance, and creating high-value customer-facing documentation.
- Elevated system performance and optimized hardware integration by designing high-performance software for network devices, including NICs, DPUs, switches, routers, and firewalls.
- Led the design and implementation of a performance management system for Cloud Object Storage, introducing S3-benchmark and IBM's Object Generator to the client environment.
- Enhanced software-hardware performance and compatibility by upgrading drivers, kernel modules, and firmware in close coordination with hardware engineering teams.
- Fortified system defenses and safeguarded data integrity by employing network security protocols such as IPsec, VPN, and firewall.
- Engaged in strategic discussions and workshops, sharing knowledge across teams and helping customers adopt cloud solutions aligned with their business and technical goals.

- Maintained alignment of new application developments with business objectives, while strengthening stakeholder partnerships, managing Service Level Agreements (SLAs) with clients, and assessing the financial impact of application downtime.

IBM • Bangalore, INDIA

Jan 2006 – May 2019

Senior IT Specialist

Managed the migration of Lotus Notes databases to IBM Cloud for a Business Partner application, while setting up CI/CD pipelines and handling version control with GIT for smooth deployments and updates.

- Reduced time-to-hire by automating the hiring process across Cloud, Cognitive, and Mobile projects through the Blockchain-based solution.
- Contributed to multiple successful cloud migration projects and supported the development and data setup for the Travel@IBM project, utilizing ZOS and DB2 on IBM mainframe systems.

TECHNICAL SKILLS

Cloud: AWS • IBM Cloud • Azure • Google Cloud Platform

AI Platforms: IBM Watsonx • Google Cloud AI • AWS AI

Product: Snowflake • Power Designer • Blockchain • Service Now • Docker & Kubernetes • Snowflake

Programming Language: Python • C • C++ • Java • Cobol • JCL • REXX • PL/I

Cloud & Virtualization: Kubernetes • Docker • AWS • OpenStack • SDN (Software Defined Networking)

Networking Protocols: TCP/IP • UDP • HTTP • DNS • VPN • BGP • OSPF

DevOps & CI/CD: Git • Jenkins • Docker • Kubernetes

Scripts: AngularJS • Nodejs • JavaScript

RDBMS: DB2 • Postgres • MySQL

NoSQL: Cloudant • DynamoDB • MongoDB

DevOps tools: Terraform • Gitlab • GIT • Jenkins • Security scans

Methodology: Agile & Waterfall

Other: MS Office Suite • Google Suite • Virtual Meeting Software • Power Designer • Jupyter Notebook

Education

M.B.A. in Information Technology • Symbiosis Centre for Distance Learning

B.E. in Electronics & Communication • Visvesvaraya Technological University

Certifications & Training

Design Thinking and Innovation • Harvard University

IBM certified L1 architect certificate (In Progress) • Watsonx.ai Technical Sales Intermediate • TOGAF Foundation • IBM

Architectural thinking in Practice workshop • IBM Design Thinking Workshop Graduate • IBM Cloud Garage Workshop Graduate

Building Cloud-Native and Multi Cloud Applications

Professional Development

Gen AI for Business Leaders • watsonx.ai Sales – Data and AI • Team Solution Design • IBM Architectural Thinking • IBM

Architectural Thinking in Practice • Government Insights and Solutions

Awards & Recognition

- Invention Development Team – Silver and Bronze Badge IBM
- Excellence award for contribution towards IBM patent reviews

Patents & Publications

- [IP Link](#) - Dynamically Personalizing Retrieval Augmented Generation Output
- Enabling User Privacy on Third Party Devices (filing in progress) (**Patent# P202400874US01**) (**Invention# P202400874**)
