Professional Summary:

- Proficient full-stack developer with **9 years** of experience in **Java, Spring Frameworks, and Cloud services**.
- Extensive experience in designing, architecting, and implementing web applications in a JEE environment using **Servlets, JSP, JSF, JDBC, and Application Servers (WebSphere, Tomcat, Nginx)**.
- Expertise in Core Java with **Multithreading, Concurrency, File Handling, I/O, Generics, Collections, Error Handling, Garbage Collection, Java 8/11/17** features like Parallel Streams, Lambda, and Functional Interfaces, Sealed Classes.
- Experience with **Angular, JavaScript, jQuery, TypeScript, and Bootstrap** for designing and developing dynamic and user-interactive websites.
- Experience in designing, developing, and deploying cloud-native Microservices applications using **Spring Boot** and working with Spring modules like **Spring MVC, Spring Security, Spring Data, Spring Batch, Spring IoC, Spring ORM, Spring JDBC, Spring Web Services, Spring JMS, Spring AOP**, etc.
- Knowledge of Web **Service Oriented Architecture (SOA)** fundamentals and exposure to Web services-WSDL using **REST** and **SOAP** web services
- Experience with application security features such as authentication, authorization, encryption, logging, and application security testing, and containing modern distributed mechanisms like **OAuth2 and JWT**.
- Expertise in server-side development with **JDBC, Servlets, MVC architecture, Java Beans, and XML**.
- Experienced with RDBMS implementation and development using **MySQL, PostgreSQL, and Oracle**.
- Expertise in ORM tools, Hibernate, with **JPA** specifications, **HQL, Caching, ACID transactions, and Locking**.
- Expertise in database modeling and development using NoSQL Databases such as **MongoDB** and **AWS DynamoDB**.
- Expertise in creating **Databases, Tables, Stored Procedures, DDL / DML Triggers, Views, Functions**, and data dictionaries, and maintaining data integrity and Indexes using SQL.
- Experience using **Maven, Jenkins, and Log4j** tools, and experience in Data Modeling, Design, and Development.
Implementation and administration of Database systems using MySQL.
- Good hands-on experience in cloud-native technologies using Spring Boot and container orchestration services, including **Docker, Kubernetes**, and message-oriented middleware using **Kafka** and **RabbitMQ**.
- Experience working with **Amazon Web Services (AWS)** to quickly deploy the JVM-based application on the cloud.
- Understanding of OOPs concepts, Functional Programming, **Design Patterns**, and Integration of N-tier applications.
- Participation in all phases of **project development, including architecture, requirements gathering, and analysis**, as well as project **design, development, implementation, and deployment**.
- Collaborate with business and technology stakeholders to define and deliver end-to-end solutions while maintaining a firm view of quality metrics and delivery expectations throughout the sprint.
- Experience using bug/issue tracking, project Tracking, and Management tool **JIRA**.
- Working experience in **Agile (SCRUM)** and Behaviour-driven development (BDD) methodologies.
- Experience in application development in Continuous Integration environments like **Jenkins** to integrate and deploy code on CI environments for development and testing.
- Performed code reviews from the engineering team, which owned and maintained codebases.
- Experience in using version control and configuration management tools like **SVN, GIT, and GitHub**.
- Managed and maintained large geospatial datasets, ensuring data quality, accuracy, and accessibility.
- Experiences working with enterprise application development IDEs like **NetBeans, Eclipse IDE, Spring STS, and IntelliJ**.

Technical Proficiencies:

Languages	Java 8/11/17, Angular, JavaScript, Blockchain, PHP
Markup/XML Technologies	Angular, HTML5, CSS3, XHTML, JavaScript, jQuery, Ajax, JSF, JSON, XML, XSD, XSL/XSLT
Tools & Framework	Spring Boot, Spring MVC, Spring AOP, Spring Security, Express.js, Angular, Laravel, CodeIgniter, Hyperledger Fabric
Web/App Servers	Apache Tomcat, Apache HTTP Server, WebSphere, JBoss, Weblogic, Nginx, PM2, IPFS
J2EE Technologies	JDBC, Servlets, JSP, EJB
Database	PostgreSQL, Oracle, MySQL, MongoDB, CouchDB
Development Tools	Eclipse, NetBeans, Spring Tool Suite (STS), IntelliJ, Visual Studio Code
O-R mapping	Hibernate, JPA, Sequelize, Mongoose
Testing Tools/ Others	JUnit 4.x, Mockito
Cloud	AWS EC2, AWS Lambda, AWS EKS, AWS S3, AWS SQS, AWS SNS, AWS Route 53, AWS Elastic Load Balancer (ELB), AWS VPC (Virtual Private Cloud), Amazon CloudFront, Amazon CloudWatch, AWS CloudTrail, AWS IAM, AWS Elastic Beanstalk, Docker, Kubernetes
Version Control	GIT, GitHub, SVN, Bit Bucket
Tools	Apache Kafka, Apache Spark, Apache Solr, Apache ZooKeeper, Maven, Gradle, YAML, Git, Docker, Jenkins, Terraform, Prometheus, Grafana, Okta, Swagger
OS & Environment	Mac OS, Windows 11, Linux, UNIX, Ubuntu

Work Experience:

InfoBeans Technologies Limited, India

May 2022 – Jun 2024

#1 Project Description:

Client: InfoBeans- New York, USA

Role: Java Full-Stack Engineer

The **Food Traceability Supply Chain** project is to merge the traditional supply chain management practices with the blockchain to trace a food package from farm to fork with a unique identity for each food package. The physical contaminants with foreign materials, persistent organic pollutants, tampering with BB (best before) dates, altering documentation, misprinting ingredients, and inappropriate storage temperatures are some significant sources raising food safety and public health risks during the processing and shipment process.

Responsibilities:

- Designed, developed, and maintained microservices for consuming data from REST APIs and generating reports using Spring Boot.
- Integrated secure user authentication and authorization using JWT tokens and OAuth2, ensuring transaction safety.
- Implemented event-driven architectures for optimized data flow and processing, improving the efficiency of reporting applications.
- Built Angular-based dashboards for real-time supply chain monitoring, improving UI responsiveness.

- Leveraged Core Java concepts such as Collections, Exception Handling, Multithreading (Executor Service), Synchronization and Java I/O for robust business logic.
- Worked on event-driven architecture using Kafka Messaging Server for microservices to internal and external services, and was involved in the development of an event time report generating tool when data is available in the system.
- Collaborated across Agile SDLC phases, including analysis, design, implementation, and testing, using Spring Framework and Hibernate.
- Prepared and executed unit and integration tests using the Behavior-Driven Development (BDD) framework, JUnit and Mockito to ensure software quality.
- Configured and managed CI/CD pipelines with Jenkins, automating builds and deployments across various environments.
- Experienced in building monolithic applications and applying various design patterns such as Builder, Dependency Injection and Decorator.
- Worked with PostgreSQL and MongoDB databases, ensuring scalability and consistency.

Environment: Java 11/17, Spring Boot, Microservices, Angular, Kafka, JPA, Eclipse IDE, PostgreSQL, Maven, Git, Sonar, Jira, Splunk, AWS, Docker, Kubernetes.

Chapter247 Infotech, India

Feb 2021 – May 2022

#2 Project Description:

Client: MoodFlx - Victoria, Australia

Role: Java Microservices Engineer

MoodFlx is a mood monitoring and insights software solution. The goal is to normalize mood. To do that, we need to make it accessible, simple, and rewarding. That's why we wanted to take mood monitoring to the next level, embed it in the science behind mood, and stay true to securing the best quality data possible, resulting in the best analytics possible. As a result, MoodFlx measures mood in context to lifestyle – it's what we like to call 'Mood In Context Insights'.

Responsibilities:

- Created applications with Spring Framework features such as dependency injection, Spring Beans, Spring Data, Spring AOP, Spring Security, Spring ORM, Spring Boot, Spring Batch, and Spring Web Flow using MVC.
- Implemented Microservices using Spring Boot to make applications smaller and independent, and use LOG4j to log regular Debug and Exception statements.
- Using a Kubernetes cluster to build Pods on top of a Docker Image for using them to define Policies in AWS IAM is to give access to the credentials.
- Using Role-based architecture for Pods to give access to the AWS S3 Bucket and the AWS SQS Queue automatically.
- Used Jenkins for Continuous Integration and Continuous Deployment (CI/CD)
- Involved in writing Stored Procedures, Functions, Packages, and Cursors using SQL and PL/SQL for different web pages of the application.
- Used RSA extensively for modeling workflows and generating application architecture.
- Using Spring Security, SAML, and JWT, implemented a staff authority system that refers to different levels of authority.
- Created Full-Stack Dealer portal microservices using Spring Boot, Angular, and Postgres.
- Containerized microservices using Docker and deployed them on Kubernetes.
- Refactored application Integration logic, wrote CI/CD pipeline, and automated cluster deployment.

Environment: Java 8/11, Spring Boot, microservices, Okta, AWS, Lambda, CouchDB, SQS, S3, Kafka, Pub/Sub, Docker, Kubernetes, Angular.

#3 Project Description:**Client: ASI - Germany****Role: Java API Developer**

Advanced Sponsorship Insights(ASI) aims to use Artificial Intelligence Models to create a system that will use all the media content (images, videos, etc) where Adidas branding is done and then invoke images and facial recognition algorithms to calculate ROI for a particular celebrity who has appeared in the image or video. Using image and facial recognition, celebrity and brand identification processes can be automated with a higher level of accuracy, with a far quicker turnaround. The objective of this demand is to calculate the ROI for all the celebrities who are associated with Adidas with precision and record the results.

Responsibilities:

- Implemented solutions using sealed classes and interfaces to enforce controlled inheritance and improve domain-driven design.
- Built and deployed containerized microservices using Docker and Kubernetes
- Designed and implemented database schemas and entities using JPA annotations, ensuring efficient object-relational mapping.
- Using Java 8 features such as Lambda expressions and the Stream API for Bulk data operations on Collections would improve the application's performance
- Extensively used Core Java concepts such as Collections API, Exception Handling, Multithreading, Synchronization, and Java I/O during business logic development.
- Leveraged Docker for containerization, expediting deployment processes by 25% and enhancing development workflows.
- Engaged in the analysis, specification, design, implementation, and test phases of the Life Cycle (SDLC) and Agile Methodology used to develop Java, J2EE, Spring Framework, and Hibernate Immunization Registry Web Application.
- Participated in PI Planning, Sprint Refinement, Sprint Retrospective, Collaboration, Business Requirements Analysis, Spike Documentation, Story Implementation, Code Reviews, Static Code Analysis, and Unit Test Cases.

Environment: Java, Spring Boot, microservices, Hibernate, MYSQL, HTML, CSS, Web Services, Tomcat Application Server, Eclipse, GIT, JIRA.

#4 Project Description:**Client: Bestarea4me - Eastleigh, UK****Role: Software Engineer**

Bestarea4me is a comprehensive platform facilitating property searches across the UK, empowering users with customizable search criteria and area ratings. Leveraging advanced technologies such as web scraping and diverse APIs, it aggregates extensive data on vital factors, including crime rates, school performance, and transportation accessibility. With detailed property listings and postcode-specific insights readily available, users can make informed decisions. The platform's intuitive heat map feature allows for seamless area exploration, while its efficient management structure, overseen by a dedicated Super Admin, ensures a smooth experience for both front-end and back-end users alike.

Responsibilities:

- Involved in software architecture, detailed design, coding, testing, and creation of functional specs of the application.
- Performance tuning of the application and using Spring Batch for bulk transaction processing.
- Designed and implemented enterprise applications using JEE (Servlets, JSP, JDBC, JSF) with Oracle

backends.

- Performing Code reviews with the team and design reviews with the Architects.
- Preparing builds, deploying, and coordinating with the release management team to ensure that the proper process is followed during the release.
- Providing End-to-end support for the testing activities during System Testing and UAT.
- Utilized Web services, RSS feeds, real-time data, and imported CSV to get data about all variables.
- Made different rule sets to calculate ROI.
- Define some Rulesets and formulas to calculate ratings for all areas of the UK. Show results on the heat map.
- Participated in PI Planning, Sprint Refinement, Sprint Retrospective, Collaboration, and Business Requirements

Environment: JEE, Servlet, JSP, Web API, JSON, JavaScript, JQuery, D3.js, Oracle, Angular.

Education:

Master of Computer Applications, Indore, India
Rajiv Gandhi Technical University

Jun 2012 – May 2015

Bachelor of Computer Applications, Indore, India
Devi Ahilya Vishwavidyalaya

Jun 2009 – May 2012
