

NAVEEN REDDY SARUGARI

Irving, TX | +1 (816) 747-7300 | naveen.reddy.sarugari@gmail.com | [LinkedIn](#)

PROFESSIONAL SUMMARY

- 4+ years of experience designing and developing scalable full-stack and backend applications using Java 21, Spring Boot 3.x, Node.js, Python, React 18, and Next.js 14.
- Expertise in microservices architecture, RESTful/GraphQL APIs, and database optimization with PostgreSQL, MySQL, MongoDB, and Redis, improving system performance and reducing latency.
- Skilled in CI/CD pipeline automation, containerized deployments (Docker/Kubernetes), and cloud integrations (AWS ECS, Lambda, S3), enhancing release reliability and operational efficiency.
- Implemented secure authentication and authorization frameworks using OAuth2, JWT, and API Gateway, strengthening data protection and compliance.
- Collaborative professional with experience in cross-functional teams, translating complex requirements into high-quality, production-ready solutions that increase business value and user engagement.

TECHNICAL SKILLS

Programming Languages: Java (Spring Ecosystem), Python, TypeScript, JavaScript, Go, SQL, Shell Scripting.

Frontend Development: React.js, Next.js, Angular, Redux Toolkit, Tailwind CSS, Material UI, HTML5, CSS3, RESTful Integration.

Backend Development & Frameworks: Spring Boot 3.x, Spring Cloud, Hibernate, Node.js, Express.js, Django, Flask, GraphQL, gRPC.

Databases & Storage: PostgreSQL, MySQL, MongoDB, Redis, DynamoDB, Cassandra, Elasticsearch.

Cloud & DevOps: AWS (EC2, ECS, Lambda, RDS, S3, API Gateway, CloudWatch), Docker, Kubernetes, Jenkins, GitHub Actions, Terraform, Helm, Nginx.

System Design & Architecture: Microservices Architecture, Event-Driven Architecture, Domain-Driven Design (DDD), API Gateway Patterns, Message Queues (Kafka, RabbitMQ), Serverless Architecture.

Testing & Automation: JUnit 5, Mockito, PyTest, Cypress, Postman, Newman, Selenium, TestContainers.

Security & Compliance: OAuth2, JWT, Spring Security, HTTPS/TLS, Role-Based Access Control (RBAC), OWASP, API Security.

Monitoring & Performance: Prometheus, Grafana, ELK Stack (Elasticsearch, Logstash, Kibana), Jaeger, OpenTelemetry.

CI/CD & Version Control: Git, GitHub, GitLab CI/CD, Bitbucket Pipelines, Maven, Gradle.

Collaboration & Tools: Jira, Confluence, VS Code, IntelliJ IDEA, Postman, Docker Desktop.

PROFESSIONAL EXPERIENCE

Software Development Engineer

Jun 2025 - Present

U.S. Bank | Texas, USA

- Architected cloud-native financial and logistics services using Spring Boot 3.x, Kafka, and AWS ECS, delivering high-availability workflows that maintained 99.99% uptime.
- Rebuilt the order management UI in React 18 and Next.js 14, incorporating server-side rendering and caching strategies that cut load times by 28% on traffic-heavy pages.
- Fine-tuned PostgreSQL queries and implemented Redis caching, which streamlined order retrieval and brought API latency down by 32%.
- Introduced a secure OAuth2 + JWT layer with Spring Security, significantly reducing unauthorized requests and ensuring full data-protection compliance.
- Dismantled a monolithic legacy core into microservices, simplifying deployments and accelerating delivery cycles by 40%.
- Set up GitHub Actions pipelines integrated with Docker and Terraform, enabling frictionless releases and consistent infrastructure builds.
- Expanded unit and integration coverage with JUnit, Mockito, and PyTest, helping prevent regressions and lowering production issues by 30%.
- Partnered closely with product and QA teams to align system design with evolving business goals, ensuring features reached users 25% faster.

Software Engineer Assistant

Jun 2024 - May 2025

University of Central Missouri | Warrensburg, MO

- Built end-to-end research automation solutions using Spring Boot and Django, eliminating repetitive academic workflows and boosting operational efficiency by 22%.
- Leveraged OpenAI GPT APIs to generate analytical summaries, cutting manual data interpretation time by nearly a third.
- Automated research data pipelines with Python (Pandas, NumPy), enhancing throughput and reducing ETL bottlenecks by 25%.
- Delivered interactive visualization dashboards in React and Plotly, enabling faster, data-driven academic insights across departments.
- Strengthened backend reliability by enforcing secure REST endpoints with Flask and SQL, which helped maintain consistent data integrity.
- Improved test reliability with JUnit and PyTest automation, reaching 90% code coverage across microservices.
- Deployed reproducible environments through Docker, ensuring parity between development and research systems.
- Collaborated with faculty leads to translate algorithmic concepts into modular, production-ready backend components.

Software Development Engineer

Jan 2021 - Dec 2023

CLOUD4C Services Pvt Ltd | Hyderabad, India

- Engineered a multi-tenant microservices platform with Spring Boot and PostgreSQL, enhancing transaction throughput by 35% and ensuring uninterrupted uptime.
- Modernized enterprise dashboards using React.js and Next.js, improving responsiveness and lifting user engagement by 25%.
- Reworked database and cache architecture with Redis and SQL optimization, cutting API response time by nearly one-third during peak workloads.
- Strengthened platform security through OAuth2 and JWT-based authorization, driving compliance with SOC2 standards and lowering integration risks.
- Reorganized legacy systems into service-oriented modules, supporting parallel team development and simplified feature scaling.
- Expanded regression testing suites using JUnit, Mockito, and Selenium, improving reliability and reducing post-release defects by 20%.
- Integrated Prometheus and Grafana dashboards for system health tracking, cutting issue detection time by 40%.
- Containerized and deployed workloads via Docker and Kubernetes, achieving seamless rollouts and shortening release windows by 30%.

Software Development Intern

Jan 2020 - Dec 2020

CtrlS Datacenters | Hyderabad, IN

- Automated provisioning workflows using Python and shell scripts, saving nearly a quarter of manual server management time.
- Enhanced database performance by optimizing SQL queries, leading to 30% faster report generation for the asset tracking system.
- Created REST-based monitoring utilities in Python Flask, minimizing infrastructure downtime by 15%.
- Partnered with system engineers to convert operational requirements into scalable backend utilities that improved internal delivery timelines.
- Introduced PyTest-driven validation for automation scripts, improving reliability and reducing post-deployment errors.
- Authored structured documentation and onboarding manuals, cutting new-hire training time by 40%.
- Collaborated on backend integration using JavaScript and SQL, strengthening data visibility across internal applications.
- Supported the transition to Dockerized environments, enabling consistent testing and streamlined deployment.

PROJECTS

Smart E-Commerce Platform | Full Stack (React 18, Next.js 14, Node.js, Spring Boot, PostgreSQL, AWS)

- Developed Spring Boot and Node.js microservices for product, order, and payment workflows, achieving 35% faster API response and seamless horizontal scalability with Kubernetes.
- Built a React 18 + Redux frontend with SSR via Next.js 14, enabling real-time updates and improving user engagement by 25% on high-traffic pages.
- Optimized PostgreSQL schemas, indexing, and JPA queries while integrating AWS S3 + CloudFront for static assets, reducing database latency and asset delivery by 40%.

Real-Time Chat Application | Node.js, WebSocket, MongoDB, React Native, Redis

- Engineered a low-latency WebSocket backend in Node.js + Express, supporting 10K+ concurrent users with <200 ms message delivery.
- Designed a MongoDB sharded database with TTL indexes and implemented Redis pub/sub, enabling fast message retrieval and real-time synchronization across distributed servers.
- Developed React Native mobile frontend with Firebase Cloud Messaging push notifications, ensuring seamless real-time communication on iOS and Android.

AI-Powered Code Review Tool | Python, Flask, React, ML, GitHub Actions

- Created a Python Flask ML engine to perform static code analysis, reducing manual review effort by 40% and prioritizing high-risk code segments.
- Built an interactive React.js dashboard to visualize code quality metrics, enabling developers to accelerate remediation cycles and maintain code standards.
- Implemented a CI/CD pipeline using GitHub Actions, integrating automated linting and ML checks on commits, improving code consistency and deployment reliability.

EDUCATION

Master of Science in Computer Science

Dec 2023 - May 2025

University of Central Missouri | Warrensburg, MO

CERTIFICATIONS

- Java Programming and Software Engineering Fundamentals - **Coursera**.
- Full Stack Web Development with React Specialization - **Coursera**.
- Google IT Automation with Python Professional Certificate - **Coursera**.
- Developing Applications with Google Cloud Platform Specialization - **Coursera**.
- Building Applications with Docker and Kubernetes - **LinkedIn Learning**.
