

Rahul Krishnan Nair K

Enterprise Cloud Solutions and Security Architect

+1-6823246711 | rahneo@outlook.com | New Jersey, USA

PROFESSIONAL SUMMARY

Enterprise Cloud Solutions & Security Architect with 17+ years of experience in Architecture, around various technology portfolios such as Infrastructure, Security, Build, Administration, DevOps, Data Engineering, Analytics, Cloud implementations and rendering best practices with strategy driven assignments. My experience includes Infrastructure, Security, Vulnerability management across traditional/virtual, Cloud based services for IaaS, SaaS and PaaS, enterprise grade client/server software development, high performance B-B and B-C products & services, software & systems architecture, DevOps practices & agile software development, Big Data, adaptive data analytics and creation of ITIL compliant 7x24x365 global Technical Operations services for Enterprises Services. I'm passionate about setting up and managing world class infrastructure, underlying security and emerging Cyber threats and establishing industry renowned security frameworks to prevent breaches and attacks

Specialties:

- Security, Vulnerability and Patch Management, Pen Testing
- VMware and vSphere
- Cloud Management Computing (Public, Private and Hybrid)
- Performance and Capacity Management
- Cyber Risk Controls and Information Security Management
- ITIL Service Management
- Global SOC and Cloud Operations Strategy and Tactical Planning
- Global distributed team management
- Budgeting and Forecasting
- P&L Ownership (Tools & Infra)
- Service Management (ITIL, ServiceNow)
- Database-as-a-Service (Oracle, MSSQL, MySQL, Mongo DB, Cassandra)
- Disaster Recovery and Replication Technologies
- ETL/Data Warehouse/Redshift cluster
- Data Center Migrations (Virtual/Physical)
- Enterprise Data Architecture (IaaS)
- Networking Management

TECHNOLOGY

- **Cloud:** AWS Cloud (Proficient), Azure Cloud (Intermediate), Google Cloud (Proficient), Oracle (Intermediate), Azure DevOps, Terraform, Ansible, CloudFormation, CDK - Intermediate
- **OS platform and Programming Languages:** Microsoft Windows Server 2008/2012/2016/2019, Debian, Centos, RHEL, Mobile OS, Python, JavaScript, PHP, JSON, Typescript, Ansible, Terraform, CDK etc.
- **Networking, Firewall:** CISCO Switches, Meraki, Juniper, SonicWALL NSA and TZ, Ubiquity, SDWAN
- **Storage:** SAN, NAS, ISCSI - Hitachi, Dell, Gluster, JellyFish, StorageCraft, Barracuda, Veeam etc.
- **Data Engineering and Analytics:** Redshift, Tableau, Pentaho, Spoon, MicroStrategy
- **Exchange:** Symantec Mail Gateway, Proofpoint, Q365 Security
- **Tools:** Active Directory/ADMT/DNS/DHCP, Failover clusters, GPO, HA, FT, DRS, Group Policy Management, FSR, DFSR, Veeam etc.
- **Virtualization:** VMWare ESX/ESXi, vCenter Server, Knowledge on Hyper-V, VMware vSphere
- **Enterprise Architecture, ITSM:** ArchiMate (Open Group), ServiceNow, Remedy, Zendesk, JIRA, Confluence, Asana, Monday.com, Clarizen, Zendesk, Agile and Scrum
- **Security - SIEM,** Mail Security, AV, Firewall, Qradar, McAfee, ELK Stack, Splunk, Google Chronicle - SIEM and XOAR, FireEye, & Compliance, Barracuda, Symantec Endpoint Protection, Symantec Antivirus, Norton Security, Trend Micro, Kaspersky, Rapid 7, Fortinet, Microsoft Sentinel, NIST, MITRE, OWASP, IEC 81001, PSIRT, ISO 27001, Zero Trust Architecture etc.

Domain/Design Expertise

- Responsible for Enterprise Architecture - Played a critical role in translating business strategy into technical strategy to defines end-to-end technology Infrastructure and Security architectures that support the business goals and objectives
- Served as the enterprise group architect to engineer, implement security and infrastructure controls and framework through the entire digital transformation journey
- Led a data center/cloud security and transformation project saving approximately \$150K annually while dramatically improving system security, reliability, and resiliency.
- Involved in hands-on Design, Implementation, Support and troubleshooting all on-premises and Cloud infrastructure and Security
- DevOps - Git, Terraform Azure DevOps, Kubernetes, Docker, and Jenkins - Administration, Upgrades, Code Releases, Migrations including definition and exercising security benchmarks through live working sessions and couch sessions

EXPERIENCE

First Citizens Bank (formerly SVB), Barracuda Networks, Leaf Home | Santa Clara, CA
Enterprise Cloud Solutions and Security Architect

Jan 2023 - Present

- Established a Center of Excellence (COE) focused on DevOps for Application Delivery and software engineering best practices for coding standards and cloud-based application delivery.
- Overhauled the CI/CD strategy across various banking and other projects, configuration management and process improvement of efficiencies through software engineering coding standards and delivery best practices.
- Led the solution design, partner with practice and pre-sales to put together winning proposal based on the capabilities.
- Derived Strategies and Roadmaps from analysis of current State, Business Drivers, Target State and Opportunities
- Developed key solution architecture for Cloud Transformation Projects, BlockChain, RPA AI/ML, DevSecOps, FinOps, Data Engineering, IGA/IAM, GRC and Cybersecurity.

- Acted as a bridge between the business and the technical groups as a trusted advisor and a liaison for every architectural design security review
- Guided and developed several RFP proposals/winning deals upward -\$25 million.
- Conceptualized and designed COE teams with re-usable artifacts that can be leveraged across multiple projects.
- Direct communication and reporting with C-Level and ability articulate technical details into business language/acumen.
- Facilitated driving delivery excellence across various portfolios to implement value added services for customers for better ROI. Scrum calls (Daily), Sprint planning, Retrospect, Agile
- Hands-on Architect for technical implementation of solutions (full stack - data and security) and code review.
- Conducted architectural reviews to identify and provide key recommendations and insights governing the ARB suggestions and compliance policies.
- In-depth understanding of various Linux distributions (e.g., Red Hat, CentOS, Ubuntu, Debian, SUSE, etc.) and their installation, configuration, and maintenance
- Gap Analysis on the current security posture of the data platforms and other solutions in the cloud were determined leveraging the Security Control Towers, Trusted Advisor, IAM Policy review along with identifying vulnerabilities on cloud resources through AWS guard duty and inspector.
- Implemented best practices by leveraging the well architected framework and presented the improved security posture based on ranking to senior leadership.
- Design VMware virtualization architectures for on-premises, hybrid, or cloud environments
- Define best practices for virtualized infrastructure, ensuring high availability and scalability.
- Implement resource allocation strategies using DRS (Distributed Resource Scheduler) and vMotion.
- Manage capacity planning and workload balancing. Implement security policies for VMware environments, including access controls and encryption.
- Utilized OWASP Dependency-Check and npm audit to detect vulnerable packages.
- Enforced container security best practices using Docker scanning tools (Trivy, Clair) for Node.js microservices.
- Implemented OAuth 2.0 with OpenID Connect (OIDC) using Keycloak and Spring Security for Single Sign-On (SSO) across microservices
- Migrated from session-based authentication to JWT-based authentication with signed and encrypted tokens to prevent tampering.
- Implemented role-based access control (RBAC) and attribute-based access control (ABAC) using Spring Security annotations (PreAuthorize, @Secured).
- Eliminated OWASP Top 10 risks by integrating security best practices into the DevSecOps pipeline.
- Used OWASP Dependency-Check to detect vulnerable Java libraries and enforce dependency upgrades.
- Prevented API abuse, brute force attacks, and token theft by enforcing secure JWT practices and rate-limiting mechanisms.
- Integrated ELK Stack (Elasticsearch, Logstash, Kibana) for real-time security event monitoring.
- Enforced mutual TLS (mTLS) for inter-service communication to prevent unauthorized access.
- Secure Data Storage & Encryption - Integrated SAST (Static Application Security Testing) tools like SonarQube and Checkmarx into the CI/CD pipeline.
- Architected and Designed SAP applications run as containerized microservices.
- Eliminated API security vulnerabilities, reducing risk exposure to IDOR, CSRF, and token leakage attacks.
- Implemented input validation and output encoding using Spring Boot Validator and OWASP Java Encoder to prevent XSS and SQL Injection attacks.
- Implemented API Gateway (Spring Cloud Gateway) with rate limiting, input validation, and request authentication.
- Prevented IDOR by implementing secure object references instead of exposing raw database identifiers in API responses.
- Advocated and provided hands on subject matter expertise and guidance when debugging complex issues.
- Implemented projects associated with streaming HL7 to FHIR Data with Dataflow and modernize legacy HL7 data in Amazon HealthLake
- CIAM Migration to Auth0 for a leading cloud security provider. Led and successfully transitioned legacy auth mechanism (DB) and SSO to Auth while ensuring continuous operation with minimal disruption
- Developed key architectural design and security process around Identity and Access Governance.
- Evaluated the current state of the Identity and Access Governance posture and provided recommendations to implement Contractor Identities onboarding, Architecture, Configuration and Access Reviews, Application onboarding and Identity Risk Profile and Maturity Model
- Identity Governance - Implementation, Integration and Access certification - UKG and Sailpoint. This involved the actual implementation and MVP for VA disaster recovery setup for SailPoint, SIEM tool integration, Azure web services migration to Azure OOTB connector, UKG Aggregation performance fix, Attribute Sync enablement for existing sources etc.
- Responsible for Application architecture and providing technical guidance to application support teams
- SSL/TLS Hardening and Standardization, SSL Certificate Management Automation
- Load Balancer and Web Application Firewall (WAF) Configuration using HTTP (HSTS), TLS.
- Used ECDSA certificates instead of RSA for better performance without compromising security
- Established technical architectural leadership in response to business challenges.
- Lead new business requirements into actionable IT solutions and enduring solutions are in line with technological capabilities and cost targets.
- Working knowledge of Dialogflow AI, Translation API, Auto ML, BigQuery ML, Transcribe, Bedrock on GCP and AWS
- Implemented Gen AI services for a key tax automation program leveraging Azure AFR service, Azure Speech Service and RPA UIPath services.
- Empowered and tracked the compliance of all new infrastructure services with the agreed standards are supporting the integration of and convergence to new solutions as they emerge.
- Lead the management of Cyber-Security services for hybrid-cloud environment.
- Developed and managed Cloud and on-prem hosting services budget.
- ❖ Experience working with healthcare health care clients and sound understanding of SOC 2, NIST, HIPAA, GDPR, ISO 27001 frameworks and protocols and implementing them across the organization.
- ❖ Good understanding of the FDA cybersecurity regulations and requirements such as SPDF and pre-market and post-market responsibilities.

Grocery Outlet | Alameda, CA

Nov 2021 - Dec 2022

Cloud Solutions Architect

- Responsible for Enterprise Architecture - Played a critical role in translating business strategy into technical strategy and defines end-to-end technology architectures that support the strategy.
- Provided Architectural expertise on strategic planning actions and policy decisions related to the systems and makes recommendations concerning the overall IT landscape that covers Infrastructure, applications, integrations, and security
- Architected and configured security tools and infrastructure. Developed best practices and standards governing cloud security architecture (AWS, Google Cloud Platform, Azure) and identifying potential risks and implementing security controls - Chronicle, WAAP, RCaC, Security Command Center, Cloud Armor, Key Management, NGFW, Google Threat intelligence, Madiant digital threat monitoring, AWS Guard Duty, Shield, Inspector, Security Hub, Cognito, Detective etc.
- Configured Google Cloud Audit Logs to track all IAM related activities
- Deployed Wiz agentless scanning to provide a unified security graph across AWS and GCP
- Implemented Wiz Network Exposure Analysis to detect publicly exposed services and enforce security groups/NACL policies
- Integrated Wiz with SIEM (Splunk) to centralize risk analysis.
- Integrated CIEM (Cloud Infrastructure Entitlement Management) to enforce least privilege principles on AWS IAM and GCP IAM.
- Implemented Just-in-Time (JIT) access controls for sensitive cloud workloads using Wiz & AWS IAM Identity Center.
- Enabled real-time scanning of cloud workloads, containers, VMs, and serverless functions to detect misconfigurations and vulnerabilities.
- Developed and enforced enterprise-wide user on-boarding and off-boarding mechanisms through IAM best practices and implemented EA security standards. The creation of user accounts and access privileges were granted through Terraform Automation (IaC). This greatly assisted to track changes and automating audits.
- Set up Wiz Threat Intelligence alerts for known exploit attempts targeting cloud workloads

- **Hardened Kubernetes & container security**, preventing misconfigurations and critical CVEs from reaching production.
- Used **Wiz Attack Path Analysis** to detect excessive IAM permissions and privilege escalation risks
- **Integrated Wiz with Kubernetes clusters (EKS, AKS, GKE)** to detect misconfigured workloads, exposed secrets, and unscanned container images
- **Integrated Wiz with Terraform & Infrastructure-as-Code (IaC) scanning** to enforce security policies before deployment
- Designed and implemented IAM architecture based on the principle of least privilege.
- Automated compliance reporting for **HIPAA, NIST, and CIS benchmarks with Wiz Policy Engine**
- Eliminated outdated SSL/TLS vulnerabilities, meeting **PCI DSS, ISO 27001, and SOC 2 compliance**
- Reduced SSL certificate-related outages by **90%** through automated lifecycle management.
- Improved application performance by **30%** using optimized TLS configurations.
- Enhanced security posture by preventing **MITM attacks, SSL stripping, and weak cipher exploits.**
- Implemented service account(s) for application services and compute workloads and documentation (including version control) on how to manage and audit them from time to time.
- Developed the IAM standards for the organization by considering each of the organization's business until security considerations and the groups access to services and resources.
- Enforced **TLS 1.2/1.3** with strong ciphers and **HSTS (HTTP Strict Transport Security)** to prevent downgrade attacks.
- Generate reports on IAM audit findings and track remediation efforts and ensure that your IAM configurations comply with relevant industry standards and regulations (e.g., SOC 2, PCI DSS, GDPR)
- Enforced security best practices for IAM, including multi-factor authentication (MFA) and privileged access management (PAM)
- Leverage native tools such as Google IAM recommender, Audit logs, Organizational Policies, Access Analyzer to carry out regular security assessments and audits of configurations to implement a robust security posture
- Established a audit review process mechanism with the documentation outlining the areas targeted during the entire period such as Principle of Least Privilege Management, service account management, Role analysis, Group management.
- Reviewed and modifying existing IAM policies based on changing business requirements.
- Conducted training and awareness programs organized by Enterprise Architecture Council to various teams under each of the business/application teams
- Design and implement disaster recovery solutions using VMware Site Recovery Manager (SRM).
- Configure high-availability (HA) and fault tolerance (FT) to minimize downtime.
- Automate tasks using PowerCLI, vRealize Orchestrator, or Ansible.
- Diagnose and resolve performance bottlenecks, network issues, and hardware failures.
- Governed and maintained the IAM architecture, best practice standards to ensure the documentation is up to date and reflects the most recent state of security controls, risk and compliance standards etc. in the organization
- Investigated and resolved IAM-related security incidents. Automated the creation of new service accounts via Terraform.
- Participated in security reviews and audits to analyze and review potential security risks and implement measures to prevent them.
- Experience in carrying out enterprise-wide transformation across server migration, application migrations and providing expert advice on all areas related to IT
- Experience in configuring and maintaining critical system services, including **networking, firewalls, storage management, file systems (e.g., EXT4, XFS, NFS), and system services (e.g., SSH, cron jobs, syslog).**
- Google Cloud Security Operation Center design and implementation - Set Up Chronicle Rules and Detection Logic. Automate workflows, case/incident queue review, alert ingestion, EDR Alert configuration, Investigate threats, Playbook analysis, Scope Malware impact, Mandiant & Virus total threat intelligence integration.
- Design and manage VMware Cloud on AWS (VMC), Azure VMware Solution (AVS), or Google Cloud VMware Engine.
- Create detailed architecture diagrams and documentation for configurations and policies.
- Design and manage VMware Cloud on AWS (VMC), Azure VMware Solution (AVS), or Google Cloud VMware Engine.
- Hands-on experience and expertise when designing projects and cloud solutions on AWS IAM, AWS Shield, AWS WAF, AWS GuardDuty, AWS Security Hub, AWS Macie, KMS, Inspector, Detective etc.
- Reviewed threat actor attribution and malware associations on the Mandiant adv platform and investigation using Duet AI
- Owned the infrastructure and application budget consolidation and ensure the tech stack is selected considering budgetary constraints using the Archimate, Enterprise Architecture business modelling tools
- Familiar with **FinOps platforms** like **CloudHealth, CloudCheckr, or Spot.io** that integrate with AWS and GCP to provide centralized cost management, reporting, and recommendations.
- Leveraged **AWS Cost and Usage Report (CUR)** and **GCP Billing Export** to derive custom reports and insights for better decision-making.
- Configured **AWS Organizations** for consolidated billing and enabling **Linked Accounts** for managing billing across multiple business units or departments
- Leveraged built-in tools like **AWS Cost Anomaly Detection** and **GCP Cloud Monitoring** to automatically alert the team about unexpected spikes or anomalies in usage or costs.
- Experience with build and administration of SIEM platforms such as McAfee, Qradar, Splunk, Elkstack. Carried out malware analysis and reverse engineering efforts being a part of SOC team and Incident response
- Solid understanding and working experience of AWS, GCP clouds. Extensive experience in deriving HLD, LLD, standard/reference, Physical, logical architecture using enterprise architecture tools such as Archimate (Bizdesign).
- Expertise in **Single Sign-On (SSO), OAuth**, and multi-factor authentication (MFA) for secure user access.
- Ensured that the Salesforce Commerce Cloud application is compliant with industry standards such as **PCI-DSS** (for payment security), **GDPR** (for data protection), and other regional security frameworks.
- Designed API-first architectures and microservices that support integration and scalability within the enterprise environment.
- Managed, Administration of Endpoint and Proxy Solutions such as Crowstrike, TrendMicro, Darktrace, Zscaler etc.
- Defined the CI/CD and DevOps strategy for various business units and ensure the resources are being provisioned as IaC
- Established processes and standards around application integration middleware data fabric with Cloud Infrastructure such as Talend, APIGEE and MuleSoft
- Sound experience and knowledge of deploying application using .NET, RESTAPI, SOAP, Node js, React.
- Performed a greenfield implementation of SAP for application such as Store Portal and Buyers Portal
- Directed and Architected the entire design starting from scratch including developing architectural diagrams, data flow, integration flows and successful deployment to the cloud
-
- Significant experience with implementation of various threat modelling such as STRIDE, PASTA, TRIKE, ATTACK TREE, DREAD, KILL CHAIN etc.
- Knowledge of **package management tools** like **YUM, APT, and RPM** for managing software installations and dependencies.
- Optimizing Linux systems for high performance, including adjusting kernel parameters, managing system resources, and fine-tuning the CPU, memory, and disk IO.
- Experience with monitoring tools like **Nagios, Prometheus, Zabbix, Grafana, or Netdata** to ensure system health and optimize resource usage.
- Knowledge of federal & compliance regulations e.g. SOX, PCI & CPNI
- Spearheaded the Enterprise Group as key personnel to build architectures using ArchiMate modelling language powered by Bizdesign and owned the accountability of approval of all underlying architecture across the enterprise.
- Evaluated container and API security and suggest best practices include PKI infrastructure. Worked with a broad array of teams and stakeholder distributed through the globe through the entire product lifecycle- Design, Review, App development, Testing (Pre/Post), Code Review, Deployment, which includes Infrastructure in reviewing reference architecture, physical and logical architectures, authentication and authorization mechanism, data security, web and mobile layer security including API, Mobile OS security in order to identify potential misconfigurations, adherence to the foundation security benchmark under the necessary regulatory framework
- Defined security control framework carried out code reviews and ability to suggest mitigation using detailed reports using the OWASP security framework.

- Sound knowledge of NIST and MITRE framework and ability to review and streamline existing security benchmarks and carve out a maturity score based on people, process, and technology
- Developed high quality documentation, checklists and socializing it within the teams to ensure the controls are effectively plugged in to the development/architecture journey for ALL new/existing applications, infrastructure across the board
- Carried out assessments to evaluate the security posture for containers, Infrastructure, network, and cloud resources
- Sound knowledge and experience implementing WAF, Guard Duty, WAF Shield, EBS, EKS, VPC and other resources in AWS, GCP, Azure and other Datacenter security products such as Proofpoint, FireEye devices, SonicWall, Meraki, VeloCloud SDWAN etc.
- Carried out Network segmentation for PCI/PCI DSS compliance and other areas with various stakeholders to ensure all devices are segregated based on the business needs and requirements
- Developed custom Terraform scripts using Git, Azure DevOps to spin up resources in the cloud with the underlying security controls

Watchbox | Philadelphia, PA Infrastructure & Security Architect

June 2019 - Oct 2021

- Responsible for the entire IT infrastructure reporting to the Global CTO. Played a critical role in translating business strategy into technical strategy and defined end-to-end technology architectures that support the strategy.
- Provided Architectural expertise on strategic planning actions and policy decisions related to the agency's systems and makes recommendations concerning the overall IT landscape that covers Infrastructure, applications, integrations, and security
- Proven ability to build world class team of engineers across various facets of IT technology and drive greater efficiency and optimize operating costs across cloud and security infrastructure
- Designed and deploying scalable and highly available Linux server infrastructures, ensuring the right mix of hardware, virtual machines, and cloud resources.
- Expertise in **virtualization technologies** (e.g., KVM, Xen, VMware), and **containerization** (e.g., Docker, Kubernetes), including orche
- Developed best practices and standards governing cloud architecture (AWS and Google Cloud Platform) and identifying potential risks and implementing security controls
- Implementing security measures like SELinux, AppArmor, firewalls (iptables/ufw), SSH hardening, and ensuring compliance with security standards (e.g., CIS Benchmarks, PCI-DSS).
- Knowledge of Salesforce Commerce Cloud (formerly Demandware) for building scalable e-commerce solutions.
- Integrated with Salesforce Sales Cloud, Service Cloud, and Marketing Cloud to provide a unified customer experience
- Experience in using Salesforce Commerce Cloud's **Open Commerce Platform (OCAPI)** and **Shopper Engagement API (SFRA)** to customize and extend the platform.
- Configured **user authentication and authorization** using PAM, LDAP, Kerberos, and Active Directory integration.
- Designed customer-centric solutions that include product catalog, checkout, promotions, and order management.
- Designed and implemented scalable cloud architectures using **Salesforce's cloud platform**, including **Salesforce Platform**, **Heroku**, and other AWS-based services that integrate with Salesforce.
- Experience with the analysis of underlying technologies that form the solution necessary for the application of threat identification, analysis, and thread model design
- Established patch management processes and automation to keep the system up-to-date and secure.
- Designed detailed financial reports for various stakeholders (IT, finance, and business leaders) to provide visibility into cloud costs. This can include daily, weekly, or monthly reports on usage and expenditure.
- Implementing robust security measures such as end-to-end encryption, tokenization, and secure payment integrations for e-commerce transactions.
- Designed and implemented Mobile Application threat model, cyber threat tree and data flow diagram for the Watchbox App
- Acted as an escalation point for security system. Provide system security best practice architecture and develop detailed cybersecurity designs
- Experience with tools like Ansible, Puppet, Chef, or SaltStack for automating infrastructure provisioning, configuration, and deployment.
- Architecting and deploying **cloud-native applications** and systems, with a deep understanding of cloud service models (IaaS, PaaS, SaaS) and containerized environments like **Kubernetes**.
- Implemented system and OS level hardening. Lead a team of technical security subject matter experts
- Developed enterprise security reference architecture for leading e-retail and e-commerce giants
- Developed and report performance metrics to measure security engineering workload measures and KPIs
- Experience with build and administration of SIEM platforms such as McAfee, Qradar, Splunk, Elkstack
- Carried out malware analysis and reverse engineering efforts being a part of SOC team and Incident response
- Designed and implemented solution architecture after evaluating the business with the broader stakeholders based on the business needs
- Evaluated the security strategy of the organization to identify the right set of tools and standards that are necessary to bolster the gaps and vulnerabilities
- Expertise in using **AWS Cost Explorer** to analyze and visualize cloud spending trends. Ability to set up **AWS Budgets** to track cloud costs and usage against predefined thresholds, alerting stakeholders when cost or usage limits are exceeded
- Experience using **Google Cloud Billing Reports** and **Google Cloud Cost Management** to gain insights into cloud expenditures, trends, and anomalies within GCP environments.

Ascend Learning LLC | Leawood, KS Infrastructure and Security Architect

Nov 2013 - June 2019

- Spearheading and leading various technology initiatives to streamline the Infrastructure, Cloud (AWS and Azure) and Database support
- Drove innovation and improvement initiatives to deliver efficiency through engineering projects like moving to cloud based solutions which can scale and are highly efficient in performance.
- Carried out XDR Cortex Investigation and Response. Established Endpoint Security Process with workflows, RACI as a part of SOC operations and maturity model
- Developed several TODs for API, Endpoint Security Management.
- Knowledge of Darktrace Deployment Architecture - Master and Probe deployments, Appliance and modules management. Carried out Red team assessments on the underlying systems. Designed the full attack diagram as a part of the teaming exercise including key actions, starting points, as well as associated detections.
- Established a security maturity workshop using Splunk's detection capabilities and implemented the security roadmap.
- Splunk and Darktrace threat modelling and malware analysis. Implementation of technical controls such as MDE and Darktrace.
- Led several projects and a team size of 65+ members that comprises of Storage & Backup, Network & Security, Messaging, Unix, Database that includes application, and automation tools & infrastructure for configuration, administration, release, deployment, hosting & monitoring.
- Configuring and managing NFS, iSCSI, and block storage systems for shared storage environments.
- Configuring and maintaining systems for resource and application monitoring, including Nagios, Prometheus, Grafana, Zabbix, and ELK Stack (Elasticsearch, Logstash, Kibana).
- Deep understanding of Linux internals to diagnose and troubleshoot performance issues, including kernel tuning, networking issues, and disk I/O bottlenecks.
- Tuned applications on Linux for performance, using tools like strace, perf, dstat, top, htop, and iotop.
- Integrating Salesforce Commerce Cloud with legacy systems like ERP, CRM, or custom databases to create a seamless customer experience.
- Developed strategies for migrations from on-premises to AWS, Azure and Oracle cloud thereby resulting in cost savings and redundancy.
- Designed enterprise NOC/SOC operation center and drive technology roadmaps, innovations using use cases and security processes.
- Chaired the committee for rolling out Threat Notification and Advisory Notification including Threat Hunt feeds etc. from a Security Operation Center Perspective
- Developed and tested Storage strategies and Disaster-recovery plan for the platform, delivering solution that guaranteed recovery performance and high availability.

- Responsible for establishing and enforcing standards, best practices, policies, and procedures pertaining to Enterprise Services and cloud architecture, security, compliance/regulatory requirements, maintenance, and performance.
- Regularly engage with stakeholders across various business units to review the infrastructure needs and evaluate new technologies and engineer high end technical solutions for providing business value to the customers and currently moving towards hybrid cloud approach.
- Delivered Infrastructure Automation and Value addition for all Infrastructure Service Towers
- Ensured application hosting, infrastructure, security, user standards & SLA/KPI compliance is maintained. Gap analysis vis-vis ITIL Account Process & action Plan.
- Implemented defect prevention bringing down Sev1, Sev2 Incidents/Security Incidents, problem, changes. Identify, propose, and implement processes.
- Implemented Change and Problem management, Hosted CAB meetings and ensure its effectiveness through key KPI's.

iOPEX Technologies, Chennai, TN

Oct 2012 - Nov 2013

Architect - Cloud and Infrastructure

- Designed and implemented a high performing Infrastructure and Database technology for Enterprise Customers. The system is highly scalable and efficient.
- Instrumental in developing processes, infrastructure, and automation to build Platform-as-a-Service (PaaS) capabilities using private cloud technology for internal customers.
- Implemented Oracle and NOSQL databases in the AWS for various platforms which includes a HA architecture using region/zone failures.
- Managed core technologies in Server, Networks, Security SQL Server, Oracle, MySQL, Mongo DB with an overall footprint of 800+ database servers in data centers globally, hybrid clouds and cloud services (AWS and Azure).
- Implemented FireEye systems and components. Debugging L3 complex issues.
- Efficiently implemented projects in multiple technologies (network security, Web development, and database) in the matrix organization environment which includes Command Center Operations, Product Support and Application
- Proactively disseminated project information to all the stakeholders and accountable for Identifying, managing, and mitigating project risk.
- Accountable for defining and collecting metrics to give a sense for how the project is progressing and whether the deliverables are produced as per defined quality standards.
- Involved in Weekly, Monthly reviews or QBRs, and recommendations for onsite activities and customer training programs
- Assisted with customer escalations, interfacing with customers to establish, document and complete specific problem situations to acceptable standards.
- Assembled chronology of the escalated issues (RCA) maintaining a strong sense of urgency and dedication to bring customer issues to completion within appropriate time frames.

Infrascale Pvt Ltd (Previously SOS Online Backup), Chennai, TN

July 2010 - Sep 2012

Technical Lead

- Accountable for 24/7 uptime of production enterprise level Servers, Networks, Databases, data warehousing systems, data replication, backups, monitoring and alerts, disaster and recovery, and enterprise reporting systems.
- Consulted with various business units to develop enhancements for corporate data models and databases.
- Utilized and integrate multiple database platforms, including the latest versions of Oracle, SQL Server, and MySQL databases
- Responsible for providing leadership through several data center migrations, software and hardware upgrades, backup and recovery solutions, implementing Disaster Recovery for critical products, and staying on top of storage technologies and solutions.
- Provided technical direction for the development, design, and systems integration for client engagement from the definition phase through implementation and Solution Development and Delivery
- Performed critical backup on larger servers including Exchange, SQL database and using remote infrastructure application to troubleshoot the failed backup jobs and server security issues. Storage Craft backup administration and management
- Infrastructure support for enterprise and small business customers ensuring accurate and timely resolution to issues and publishing white papers as required.
- Worked as a team member and independently in areas such as: migration, engineering, production, QA, operations, and product management.
- Facilitated team and client meetings effectively and held regular status meetings with development team

e4e Business Solutions Pvt Ltd, Chennai, TN

July 2008 -July 2010

Senior Engineer - IT Security and Infrastructure

- Remote Installation and Voice support of advanced network security enterprise software from Symantec, Symantec Endpoint Protection and Symantec Antivirus Corporate Edition for enterprise clients
- Reacting quickly in case of a network compromise or downtime due to malicious
- Knowledge in the following areas: - RAID, NAT configuration, IIS, DHCP, DNS, Antivirus, and firewalls
- Providing resolution for companies/customer via phone and email managing 100-20000 servers and clients using Symantec software and diagnostics of issues related to the Software and Windows Server components including IIS, Active Directory, DNS and DHCP
- Conducted day-to-day administration of the MS Exchange 2003/2010 mailboxes and Active Directory groups, calendars, public folders, and conferencing services.
- Troubleshoot Group Policies, Domain Controllers and Admin rights and permissions for 5000+ Active Directory accounts (Windows Server 2008 R2 / 2012)
- Supported all Active Directory Federation Services and Identity Management (ADFS)
- Creating and maintaining technical documentation for messaging systems architecture
- Supported global directory synchronization, SMTP and internet messaging environments.
- Provided Tier 2 & 3 support - responding to and resolving complex and escalated trouble ticket issues coming in from the Tier 2 support staff.
- Supported all disaster recovery operations and backup procedures.

Sutherland Global Services Ltd., Chennai, TN

July 2007 - June 2008

Technical Support Engineer

- Dell Certified technician in Hardware maintenance and support for Dell laptop products
- Matter expert in troubleshooting any issues with all Windows Platforms like 98, 2000, NT, XP PRO, VISTA
- Knowledge in Wireless Networking and Routers and troubleshooting related issues.

KEY ACHIEVEMENTS

- ✓ **Data Center/Cloud Transformation Savings:** Led a data center/cloud security and transformation project saving approximately \$150K annually while improving system security, reliability, and resiliency.
- ✓ **Revenue Growth Achievement:** Increased revenue by 20% for 2023 through strategic cloud solutions.
- ✓ **Automation:** Automated data pipeline failures for a key financial bank thereby reducing upstream and application data inconsistencies and time taken to mitigate the failures.
- ✓ Automated several L1, L2 tasks through native scripts and templates

EDUCATION & CERTIFICATIONS

Bachelors: Electronics and Communication Engineering, Anna University, Chennai.

<https://badges.wes.org/Evidence?i=8d5deb57-e098-46a2-8038-55534f12840c&type=ca>

Valid and Licensed Certifications:

ITILv3 Foundation, AWS Certified Solutions Architect Professional, AWS Certified Security - Specialty, AWS Certified AI Practitioner, Google Cloud Certified Professional Architect, Hashicorp Certified Terraform Associate, TOGAF® 10.1 Enterprise Architecture Practitioner, ISACA - Certified Information Security Manager, ISACA - Certified Information Systems Auditor, ISACA - Certified in Risk and Information Systems Control, Microsoft Certified: Cybersecurity Architect Expert, Microsoft Certified: Azure Solutions Architect Expert, Microsoft Certified: Azure Security Engineer Associate, Microsoft Certified: Azure Administrator Associate
