

Rahul Reddy
Sr Java Full Stack Developer
rahulreddy0823@gmail.com
Phone: +1 913-666-8181

PROFESSIONAL SUMMARY:

Sr. Java Full Stack Developer with over 6+ years of experience in designing and implementing robust software solutions using Java/J2EE, Spring frameworks, and cloud platforms such as AWS, Azure, and GCP. Proficient in enhancing application performance and user experience, leveraging a strong background in both SQL and NoSQL databases. Maintenance of quality software applications with an earned reputation for meeting deadlines and delivering critical solutions.

- Experience in Java Application Development, with a strong grasp of Object-Oriented Concepts, Analysis, and Programming.
- Software Analysis, Design, Development, and testing knowledge in Java, J2EE, Servlets, Struts, JDBC, HTML, Angular, React, CSS, and JavaScript.
- Experience in building applications using languages such as Java, Java concurrency, and JavaScript, along with frameworks and libraries like Spring, Hibernate, Angular, and Bootstrap CSS.
- Proficient in Java 8 features including Functional Interfaces, Multithreading, Collection API, Exception Handling, Time API, and Stream API.
- Used Java 8 method references to point to methods by their names and used functional interfaces.
- Experienced in building web applications by developing backend services using Spring frameworks including Spring Boot, Spring MVC, Spring IOC, Spring Security, and Spring Cloud.
- Extensive experience with databases including Oracle, SQL Server, MySQL, DB2, and NoSQL databases such as MongoDB and Cassandra.
- Experience using web/application servers like Apache Tomcat, and Jenkins.
- Good Knowledge of web services like SOAP, RESTful services and ORM frameworks like Hibernate.
- Good knowledge of utilizing Cloud technologies including AWS, Microsoft Azure, and GCP.
- Experience in working with Azure cloud services using resource groups, app services, functions, Azure SQL DB, and Container Registry.
- Experience with Cloud Computing Service environments - Amazon Web Services such as AWS API Gateway, AWS Lambda, AWS EC2, AWS S3, AWS EBS and automating process frameworks like Terraform.
- Experience in using ANT and Maven for build automation and in using build/deploy tools such as Jenkins, and Docker for continuous Integration & Deployment for Microservices.
- Orchestrated the end-to-end data pipeline, encompassing ETL processes, data transformations, and secure data sharing across multiple layers of the stack.
- Extensively used messaging services like JMS and Apache Kafka.
- Good experience in software configuration management using SVN, GitHub, GitLab, and Bitbucket.
- Skilled in debugging and logging using log frameworks like log4j and analysis and reporting with Splunk.
- Proficient in demonstrating expertise in various methodologies such as Agile, Scrum, and Waterfall Models.
- Strong experience in Test-Driven Development (TDD) using frameworks like JUnit, Mockito, and Power Mockito, along with automated testing tools like Selenium and Apache Camel.

TECHNICAL SKILLS:

Programming Languages	Java, J2EE, JavaScript.
J2EE Technologies frameworks	JSP,JSTL,Servlets,JDBC,EJB,JavaBeansXSD,JAX-RS,JAX-WS,SOAP,WSDL, JDBC, JMS.
Web Technologies	HTML,JavaScript,AJAX,Bootstrap,jQuery,XML,CSS,JSON,Nodejs, Angular, React.
Web service Frameworks	Spring, Hibernate, Spring MVC, Spring Boot, Spring IOC, Spring AOP, Spring Web Flow, JSF, Log 4J, JUnit, Bootstrap.
Databases	Oracle, MongoDB, MySQL, MS SQLServer, PostgreSQL, Cassandra.
Application/Web Servers	Apache Tomcat, WebLogic, Apache HTTP Server, IBM WebSphere, Jenkins, WebSphere MQ.
Web Services	SOAP, REST, JAX-WS, JAX-RS.
IDEs s Other Tools	Eclipse, Visual Studio Code.
Version Control	GIT, Bitbucket, SVN.
Methodologies	Agile, waterfall, TDD (Test-Driven-Development), Scrum.
Build Tools	Ant,Maven,Gradle.
Bug tracking Tools	JIRA
Reporting Tools	Jasper Reports, Crystal Reports XI, SSRS.
Cloud Technologies, DevOps Tools	Azure,AWS, Docker, Kubernetes, GCP.
Operating system	Windows 10, Linux, Unix.

EDUCATION: Masters in Computer Science from University of Central Missouri.

WORK EXPERIENCE:

Client: HSBC, Chicago, IL.

Aug 2022– Present

Role: Sr. Java Full Stack Developer

Responsibilities:

- Experience in developing and deploying enterprise-level applications using Java 11/J2EE, Spring MVC, and Spring JDBC.
- Enhanced user engagement by integrating Angular 12 for front-end development and implementing responsive user interfaces.
- Utilized Spring Boot to accelerate the development and deployment of Java-based microservices.
- Solid experience in Object Oriented Programming concepts and writing code in Java.
- Streamlined software development lifecycle by implementing CI/CD pipelines.
- Applied core Java concepts such as Multi-Threading and Collections for low-latency backend processing.
- Designed and implemented responsive user interfaces using HTML5, CSS3, and JavaScript.
- Conducted performance testing using Apache JMeter to perform reliability under load.
- Deployed applications on the AWS cloud platform utilizing services such as EC2, S3, and RDS for effective

management.

- Developed SQL queries and stored procedures using Spring JDBC, enhancing data access.
- Implemented microservices architecture, facilitating interaction between SQL-based services via REST and Apache Kafka.
- Conducted functional testing using SoapUI, ensuring the accuracy of web services.
- Worked with NoSQL databases such as Cassandra for robust data management.
- Developed REST-based web service calls using JAX-RS, enabling seamless data exchange and integration.
- Utilized Splunk for log management and operational intelligence, gaining insights into application performance and security.
- Engaged in bug fixing related to functionality, performance, and design issues with JavaScript and jQuery.
- Employed Docker and Kubernetes for efficient deployment and orchestration of applications.
- Followed Agile CS Scrum Methodology for an iterative and collaborative development process.
- Used Maven for project management and build automation.

Environment: Java 11/J2EE, Spring MVC, Spring JDBC, Spring Boot, HTML5, CSS3, JavaScript, Angular 12, Apache JMeter, AWS S3, Microservices, SQL Server, Docker, Kubernetes, Maven, SoapUI, Splunk and UNIX.

Client: Magellan Health, Dallas, TX

Jan 2020 – Jun 2022

Role: Sr. Java Full Stack Developer

Responsibilities:

- Developed robust life insurance and investment tracking applications using Java 11, J2EE, and Spring Boot.
- Improved user experience through intuitive UI design with Angular, Bootstrap, and JSF.
- Implemented real-time data processing using Kafka, improving alert timeliness for policyholders and investors.
- Secured data transmission via SSL/TLS protocols.
- Automated software delivery processes using Jenkins, Docker, and Kubernetes, ensuring seamless deployment.
- Conducted migration of existing applications to a microservices architecture using REST APIs and Spring Cloud configuration.
- Implemented Spring security to enforce authentication and authorization mechanisms for accessing sensitive data.
- Utilized Swagger for API documentation and development, ensuring clear and consistent communication.
- Maintained applications for financial portfolio tracking, enhancing client investment management.
- Leveraged Ajax and JavaScript to create interactive web applications, enabling real-time financial performance updates.
- Implemented OAuth security measures, ensuring the security of REST API interfaces.
- Employed Spring AOP for comprehensive logging, auditing, security, and transaction management.
- Managed application deployment using Google Cloud Platform for scalability and reliability.
- Utilized Big Query and Cloud Storage for data analytics and storage.
- Integrated IAM directory for secure user authentication and authorization.
- Implemented backend functionality using JDBC, EJB, and JSP, supporting efficient policy management.
- Implemented RESTful API-based microservices using Spring Boot, and Spring Data with JPA.
- Managed WebLogic Server instances and Spring Cloud Config. Server, ensuring optimal system performance.
- Utilized Spring Batch for data processing tasks and Java concurrency for performance tuning.

- Conducted regular security audits, identifying, and mitigating potential system vulnerabilities.

Environment: Java 11, HTML5, CSS3, J2EE, Spring Boot, JDBC, EJB, JSP, Angular, bootstrap, JSF, Ajax, Swagger, GCP Spring AOP, Spring MVC, Kafka, JavaScript, IAM directory, Typescript, OAuth, Jenkins, Docker, Kubernetes, Restful APIs, SQL.

Client: Walmart, Bentonville, AR.

May 2018–Dec 2019

Role: Java Developer

Responsibilities:

- Involved in all phases of the Software Development Life Cycle, interface design, configuration of framework, QA and documentation, and maintenance.
- Used Java 1.8 features such as lambda expressions and resource classes, to develop efficient code for healthcare applications, facilitating data retrieval and manipulation from MongoDB and SQL Server databases.
- Developed customized, interactive user interfaces using JavaScript, HTML, and CSS.
- Participated in Scrum meetings, gathered business requirements, documented design specifications, and negotiated with different business units, code review, and unit testing.
- Implemented Spring MVC and React.js for efficient web application development in the healthcare domain focusing on user experience and performance.
- Used Spring API for writing components using dependency injection promoting flexibility in healthcare software development, particularly in managing MongoDB and SQL Server databases.
- Managed and secured healthcare databases, optimizing data management and implementing data encryption and access controls in MongoDB and SQL server environments.
- Automated build and deployment processes using Jenkins and Gitlab CI/CD, streamlining software delivery pipeline for healthcare services and applications.
- Managed and secured healthcare databases, optimizing data management.
- Provided prompt support for database-related issues, minimizing operational disruptions.
- Implemented HQL for efficient database operations, optimizing data retrieval and manipulation in healthcare applications.
- Developed a Single Page Web Application with React.js for seamless user experience.
- Implemented microservices architecture for effective application scaling.
- Used AWS Lambda to manage the servers and run the code in AWS.
- Developed RESTful APIs for seamless integration with external healthcare systems.
- Ensure that zero defect code is released to system testing and then to production without any issues.
- Utilized IntelliJ as the primary development and debugging environment.
- Followed Agile CS Scrum Methodology for iterative development.
- Utilized Git for version control.

Environment: Java 1.8, J2EE, Spring 5.0, Spring MVC, Spring Boot, React, Apache JMeter, AWS, Jenkins, IntelliJ, Jenkins, MongoDB, SQL Server, HQL, Microservices, IAM Directory, Restful APIs, Git.
