Java Developer

SUMMARY

Full Stack Java Developer with around 5+ years of experience in cloud native enterprise solutions. Delivered a 40% cut in frontend load time by migrating legacy AngularJS to Angular 17 and boosted backend response speed more than 30% through Redis caching and PostgreSQL query tuning. Designed and shipped microservices with Spring Boot, REST APIs, and containerized deployments on AWS, Docker, and Kubernetes, while driving Agile delivery across cross functional teams.

SKILLS

Programming & Backend: Java (8-17), Spring Boot, Spring MVC, Spring JDBC, Spring Security, Python, Django, Django REST Framework (DRF), AOP, Hibernate, JUnit, Mockito, TDD

Frontend & UI: Angular 17, ReactJS, Redux, RxJS, TypeScript, JavaScript (ES6+), HTML5, CSS3

Microservices & APIs: RESTful APIs, REST API, SOAP APIs, GraphQL, Microservices, Microservices Architecture, API Gateway, Service Discovery, IOC (Inversion of Control), OAuth2, SAML, JWT

Cloud & DevOps: AWS (EC2, S3, Lambda, IAM, Secrets Manager, CloudFormation, Kinesis), Docker, Kubernetes (EKS), Jenkins, GitHub Actions, Terraform, GitLab CI, CI/CD, DevSecOps, Maven, Tomcat

Databases & Messaging: PostgreSQL, SQL, Oracle, MongoDB, DynamoDB, Redis, Apache Kafka, AWS Kinesis, Spring Data JPA, Django ORM, efficient query tuning, asynchronous processing

Monitoring & Observability: Prometheus, Grafana, Splunk, ELK Stack, Log4j2, AWS CloudWatch, PII masking, log rotation, alerting strategies

Methodologies & Tools: Git, GitHub, JIRA, Agile, Agile/Scrum, Code Reviews, Pair Programming, Spring Cloud Resilience4j

WORK EXPERIENCE

CVS Pharmacy

Irving, TX

Full Stack Java Developer

Feb 2024 - Present

- Architected a cloud native microservices platform using Java 17, Spring Boot, and Spring MVC, exposing 15+ REST APIs for order automation and inventory sync; leveraged Git flow branching and Agile sprints to deliver features bi weekly, achieving 30% faster order processing and 99.9% uptime.
- Developed 12 RESTful services with Spring Boot and Spring Data JPA, persisting data in PostgreSQL; implemented unit tests with JUnit/Mockito, raising code coverage to 85% and cutting API latency by 28%.
- Refactored legacy backend modules into Spring MVC controllers and Spring JDBC DAOs, reducing code duplication by 40% and simplifying maintenance across eight services.
- Reduced frontend load time by 40% after migrating legacy AngularJS components to Angular 17 with RxJS, lazy loading, and modular component design, enhancing user experience for internal pharmacy users.
- Integrated Prometheus and Grafana for system monitoring and observability, enabling proactive identification of bottlenecks and reducing downtime.
- Integrated Kafka with microservices architecture to support real time inventory updates, order processing, and enterprise workflow automation.
- Secured services using Spring Security, OAuth2, and JWT, enforcing role based access controls across critical APIs.
- Built backend services supporting inventory tracking, order processing, and real time data updates, like e commerce workflows.
- Containerized applications with Docker and deployed to Kubernetes (EKS), enabling consistent deployment workflows across environments.
- Built robust CI/CD pipelines using GitHub Actions, Jenkins, and DockerHub, leading to faster and more reliable deployments.
- Configured Kafka topics, partitions, and consumer groups to optimize message delivery, fault tolerance, and application scalability.
- Worked with Python based services and explored Django REST Framework for lightweight API development and internal tooling.
- Optimized backend service response time by over 30% by implementing Redis caching, efficient query tuning in PostgreSQL, and leveraging asynchronous processing in Spring Boot microservices.
- Automated infrastructure provisioning with Terraform and CloudFormation, accelerating environment setup for new services.
- Worked on Kafka based streaming solutions along with AWS Kinesis for handling real time data ingestion and processing.
- Implemented service resiliency with Spring Cloud Resilience4j, improving system stability during backend failures.
- Built a full stack web application using Django and React for managing inventory and compliance tracking. Developed REST APIs using DRF and integrated frontend for real time inventory updates.
- Implemented authentication and role based access control using JWT.
- Implemented CRUD operations and business logic using Django ORM with PostgreSQL.
- Streamlined real time data processing using Kafka and AWS Kinesis with secure API Gateway configurations for scalable event handling.
- Led daily Scrum ceremonies and sprint planning for a 10 member cross functional team, using JIRA and GitHub for backlog grooming and version control; consistently delivered five week releases on schedule.
- Developed unit and integration tests using JUnit and Mockito, contributing to a growing automated test suite with improved code coverage.
- Participated in DevSecOps initiatives by integrating security scanning tools into the CI pipeline and advocating for shift left practices.
- Provided guidance to junior developers on Angular 17, clean coding practices, and modular design, contributing to team productivity.
- Standardized Git branching strategy (feature/release/hotfix) and automated pull request reviews, decreasing merge conflicts by 60% and accelerating release cycles from three weeks to two weeks.
- Optimized PostgreSQL queries and added indexing for high volume inventory tables, improving query throughput by 35% and supporting over one million daily transactions.

- Redesigned legacy systems for modern reporting, authentication, and logging. Upgraded Java and Spring infrastructure while introducing secure SSO, observability, and modern UI design.
- Migrated core services from Java 7 to Java 8, refactoring code to use Streams and Lambdas; reduced runtime memory consumption by 22% and improved processing speed by 25%.
- Designed and delivered nine Spring Boot microservices with Spring MVC endpoints, employing IOC and AOP for cross cutting concerns; each service exposed REST APIs consumed by front end React applications.
- Rebuilt legacy UI using ReactJS, React Hooks, and Redux, improving frontend responsiveness and reducing page load time by approximately 30%.
- Integrated OAuth2 and SAML 2.0 for enterprise grade SSO and federated identity management, increasing authentication reliability and reducing login related support tickets.
- Implemented event driven architecture with Apache Kafka and Spring Boot, handling 2M+ messages per day; tuned partitions and consumer groups to achieve sub 200 ms latency.
- Applied Java multithreading and Collections Framework to optimize batch processes and reduce latency in key data workflows.
- Deployed services to Tomcat, and later containerized applications using Docker, orchestrated with Kubernetes, increasing deployment consistency and fault tolerance.
- Created Splunk dashboards monitoring PostgreSQL performance metrics, enabling proactive tuning that cut average query time from 120 ms to 78 ms.
- Monitored Kafka message flow and system health using Prometheus, Grafana, and Splunk for proactive issue detection and troubleshooting.
- Built GraphQL endpoints for selective, frontend driven data access, enabling more flexible reporting capabilities.
- Used Spring AOP to implement cross cutting concerns such as logging, transaction boundaries, and audit trails, improving code reuse and maintainability.
- Consumed and exposed both REST and SOAP APIs using RestTemplate, Feign Clients, and custom service adapters for external integrations.
- Leveraged Spring IoC for better dependency management, decoupled design, and unit testing readiness.
- Developed dynamic UI components using React Hooks, Context API, and reusable component architecture.
- Built and managed CI/CD pipelines with Jenkins, Maven, and GitHub, reducing build and deployment errors across environments.
- Migrated relational schemas from MySQL to MongoDB and integrated DynamoDB for NoSQL use cases, improving scalability and read performance.
- Implemented structured logging with Log4j, including PII masking, log rotation, and alerting strategies for improved operational visibility and compliance.
- Collaborated in Agile teams following Scrum practices — contributed to sprint planning, daily stand ups, code reviews, and pair programming using JIRA.
- Managed source code with Git, enforcing branch protection rules and automated CI pipelines in Jenkins; reduced build failures by 45% and supported weekly releases.
- Facilitated Scrum ceremonies, sprint retrospectives, and backlog refinement for an eight person Agile team, delivering three releases per month and maintaining a velocity of 30 story points.

EDUCATION
