

Raywina R
Python Developer
Phone: +1-612-226-0644
Email: graywina15@gmail.com

PROFESSIONAL SUMMARY

- 8 years of experience designing, developing, and deploying web applications and software solutions using Python and frameworks like Django, Flask, and FastAPI
- Expertise in developing scalable backend services with Python, implementing RESTful APIs GraphQL APIs, and integrating with third-party services
- Proficient in working with Django ORM, SQLAlchemy, Celery, Redis, RabbitMQ, and Kafka for building efficient, high-performance systems
- Hands-on experience deploying applications on cloud platforms like AWS (S3, EC2, RDS, Lambda, API Gateway) and Azure (App Service, Functions, Azure Storage, Logic Apps)
- Strong knowledge of front-end technologies, including React.js, Angular 10, JavaScript (ES6+), TypeScript, HTML5, CSS3, and Bootstrap for building modern web applications
- Solid experience with relational (MySQL, PostgreSQL, PL/SQL) and NoSQL databases (MongoDB, DynamoDB), implementing database optimizations and query performance tuning
- Proficient in integrating machine learning tools like Pandas, NumPy, Scikit-learn, and Beautiful Soup for data analysis and processing in Python applications
- Skilled using cloud-native tools such as AWS Lambda, API Gateway, Azure Functions, and Kubernetes for serverless and containerized deployments
- Experience with CI/CD pipelines using Jenkins, CodeBuild, Terraform, and CloudFormation for automating deployment processes
- Strong knowledge of Agile methodologies (Scrum, Kanban), version control (GIT), and project management tools like JIRA and Confluence
- Hands-on experience in testing using tools like Pytest, PyUnit, Selenium, Mockito, Postman, and Swagger for robust application testing and API documentation
- Proficient in problem-solving, root cause analysis, and delivering solutions, with strong teamwork and adaptability in dynamic environments

TECHNICAL SKILLS:

Backend Frameworks and Tools: Python, Django, Django ORM, Flask, FastAPI, Asyncio, SQLAlchemy

Frontend Frameworks and Tools: React.js, Angular 10, HTML5, CSS3, Bootstrap, JavaScript (ES6+), TypeScript, Jinja2, AJAX

API and Microservices: RESTful APIs, GraphQL APIs, SOAP, WSDL

Cloud Platforms: AWS, Azure

Databases: SQL, PL/SQL, MySQL, PostgreSQL, MongoDB

Message Queuing and Streaming: Redis, RabbitMQ, Kafka

Containerization and Orchestration: Docker, Kubernetes, EKS

CI/CD and Automation: Jenkins, CodeBuild, Terraform, CloudFormation, Maven

Testing and Quality Assurance: PyUnit, Selenium, Pytest, Mockito, Postman, Swagger, SonarQube

Data Analysis and Scripting: Pandas, NumPy, Scikit-learn, Beautiful Soup

Authentication and Security: OAuth, JWT

Load Balancing and Web Servers: Gunicorn, Nginx, Apache

Version Control & IDE Tools: GIT, VSCode, Eclipse IDE, PyCharm

Agile and Project Management: Agile (Scrum, Kanban), JIRA, Confluence

WORK HISTORY

JC Penny
Senior Python Developer

Plano, Texas, USA
Nov 2023 to Present

- Developed scalable web applications using Python, Django, and Django ORM, delivering robust backend functionality and database management
- Designed and consumed GraphQL APIs and RESTful microservices, improving data accessibility and modularity, leading to a 25% reduction in system complexity

- Built dynamic frontend interfaces with React, Redux, React Router, HTML5, CSS3, Bootstrap, and JavaScript (ES6+), resulting in a 35% increase in user engagement and interface responsiveness
- Leveraged AWS services such as S3, EC2, EBS, ELB, SNS, RDS, DynamoDB, and IAM using Boto3 and AWS SDK, cutting deployment time by 30% and optimizing cloud-based solution performance
- Optimized application servers using Gunicorn and integrated Redis for asynchronous task processing
- Designed and executed automated testing strategies with PyUnit and Selenium, increasing test coverage by 40% and ensuring robust quality assurance
- Utilized Jenkins, CodeBuild, and CI/CD pipelines, streamlining development workflows and reducing build and deployment times by 20%
- Conducted API testing and documentation using Postman and Swagger, improving integration efficiency and reducing onboarding time for new developers by 30%
- Implemented containerized deployments with Docker and orchestrated workloads using EKS, ensuring seamless scalability and a 40% improvement in resource utilization efficiency
- Automated infrastructure provisioning and configuration with AWS CloudFormation, improving deployment consistency and reducing downtime
- Analyzed and manipulated data using Pandas, NumPy, and web scraping tools like BeautifulSoup, extracting valuable insights and automating workflows
- Created and maintained XML-based data transformations with XSD and XSLT, ensuring compatibility with third-party systems
- Collaborated in an Agile (Scrum) environment, leveraging tools like JIRA for task management and sprint planning, ensuring project alignment and timely delivery
- Managed code versioning and collaboration using GIT, facilitating effective teamwork and ensuring zero incidents related to source code integrity
- Monitored application and infrastructure performance using AWS CloudWatch, CloudFront, and CloudTrail, ensuring operational excellence and timely incident resolution

Environment: Python, Django, Django ORM, React, Bootstrap, JavaScript (ES6+), AWS, Redis, Gunicorn, PyUnit, Selenium, Jenkins, Docker, EKS, Pandas, NumPy, BeautifulSoup, JIRA, GIT, AWS CloudWatch.

ASSURECARE **Python developer**

Cincinnati, Ohio, USA
Jan 2021 to Oct 2023

- Developed and deployed web applications using Python and FastAPI, leveraging Asyncio for 40% performance improvement in high-concurrency scenarios and reducing response times by 30%
- Designed and implemented scalable RESTful APIs and microservices, ensuring modularity and maintainability, which reduced system downtime by 20% and improved overall system flexibility
- Built, tested, and optimized backend services using Scikit-learn to process and analyze large datasets, reducing data processing time by 50%
- Integrated frontend frameworks such as Angular 10, Bootstrap, HTML5, CSS3, and TypeScript for creating responsive, user-friendly interfaces
- Deployed and managed applications on AWS, utilizing EC2, S3, RDS, Lambda, and API Gateway for scalable cloud solutions
- Utilized Node.js to build server-side functionalities, improving the performance of backend services and enhancing data handling efficiency by 30%
- Worked with MongoDB and Kafka for real-time data processing and message streaming, improving system throughput by 40% in distributed environments
- Automated CI/CD pipelines using Jenkins, reducing deployment time by 25% and ensuring continuous integration and delivery with minimal downtime
- Followed Agile/Scrum methodologies to deliver projects in iterative cycles, collaborating closely with cross-functional teams
- Leveraged Terraform for infrastructure-as-code to automate the provisioning and management of cloud resources
- Implemented secure authentication mechanisms with OAuth, enhancing application security and user access control
- Applied Test-Driven Development (TDD) principles using Mockito, improving code quality and minimizing bugs
- Monitored and improved system performance using SonarQube for code quality checks and the ELK Stack (Elasticsearch, Logstash, Kibana) for log management and analysis

- Containerized and orchestrated applications with Docker and Kubernetes, enabling 40% faster deployment cycles and ensuring optimized resource utilization
 - Collaborated using Git and PyCharm, ensuring version control and efficient development workflows
- Environment:** Python, FastAPI, Asyncio, RESTful APIs, NumPy, Scikit-learn, Angular, Bootstrap, TypeScript, AWS, Node.js, MongoDB, Kafka, Jenkins, Mockito, SonarQube, Docker, Kubernetes, Git.

Tata Elxsi
Python Developer

Chennai, India
Oct 2017 to Sep 2019

- Developed and deployed dynamic web applications using Python and Flask, integrating robust backend functionality to meet diverse business requirements
 - Designed and maintained REST APIs with SQLAlchemy ORM, ensuring seamless data interaction with SQL, PL/SQL, and MySQL databases
 - Built scalable and secure applications on Azure platforms, including App Service, Functions, Azure Storage, and Logic Apps, to enhance performance and reliability
 - Implemented responsive front-end designs using HTML5, CSS3, JavaScript, AJAX, and Jinja2, ensuring a seamless user experience across devices
 - Utilized RabbitMQ for asynchronous messaging, enhancing application efficiency
 - Deployed applications on OpenShift and Heroku, ensuring scalability and efficient deployment workflows
 - Secured web applications by implementing JWT for authentication and authorization, ensuring data protection
 - Optimized application performance with Nginx, enhancing load balancing and request handling
 - Performed thorough unit testing with Pytest, ensuring high-quality code and minimizing production bugs
 - Worked in an Agile environment using Kanban for workflow management and Confluence for progress tracking
 - Utilized Git and Maven for version control and build management, ensuring efficient collaboration
 - Developed and debugged applications in Eclipse IDE, maintaining rapid development and high coding standards
- Environment:** Python, Flask, SQLAlchemy, SQL, PL/SQL, MySQL, Azure, JavaScript, AJAX, Jinja2, RabbitMQ, OpenShift, Heroku, Azure DevOps, JWT, Nginx, Pytest, Confluence, Git, Maven, Eclipse IDE.

Visteon Corporation
Software Developer

Chennai, India
Jan 2016 to Oct 2017

- Designed, developed, and maintained scalable web applications with Python and Django, ensuring client requirements were met and functionality remained seamless
 - Built and integrated RESTful APIs and SOAP-based services, leveraging JSON, WSDL, and XML for effective data exchange and system communication
 - Developed and optimized complex database queries in PostgreSQL and SQL, ensuring data integrity and efficient processing for backend systems
 - Created responsive, user-friendly web interfaces using HTML and CSS, enhancing the user experience across devices
 - Conducted data analysis to derive actionable insights, utilizing Python scripting for data extraction, transformation, and visualization
 - Wrote and tested clean, reusable code in VSCode, adhering to best coding practices and improving system maintainability
 - Documented technical processes, API specifications, and system workflows, enabling seamless knowledge transfer and system maintenance
- Environment:** Python, Django, AWS (S3, EC2, Lambda), PostgreSQL, SQL, HTML, CSS, VSCode.

EDUCATIONAL PROFILE:

- Master of Engineering (M.E.) in Communication Systems from College of Engineering Guindy, India, 2017
- Bachelor of Engineering (B.E.) in Electronics and Communication Engineering from Anna University, India, 2015
