PROFESSIONAL SUMMARY:

- **Java Full Stack Developer** with over **5+ years** of **IT industry** experience delivering scalable, secure, and high-performance enterprise applications across **banking, healthcare, and logistics** domains.
- Well-versed in **Agile and Waterfall SDLC** methodologies, participating in sprint planning, retrospectives, and end-to-end software lifecycle from requirement analysis to production support.
- Strong hands-on experience with **Core Java (Java 8/11)** including **Multithreading, Collections, Lambda expressions, Streams, and Functional Interfaces** for building modular, high-performance systems.
- Applied **design patterns** such as **Singleton, Factory, MVC**, and created **UML diagrams** like use-case and sequence diagrams to design scalable, maintainable software solutions.
- Designed applications using **Service-Oriented Architecture (SOA)** and migrated legacy systems to **Microservices**, ensuring better scalability, fault isolation, and easier deployments.
- Specialised in **Spring Boot** and **Spring MVC**, integrating with **Struts, Servlets, NodeJS**, and **open-source frameworks** to build robust REST APIs and middleware logic for business-critical services.
- Built and consumed **RESTful** and **SOAP web services** using Spring and Apache CXF, facilitating real-time data exchange between distributed components and external vendors.
- Used **Hibernate, Spring Data JPA**, and **Spring JDBC** as ORM tools for database interaction, supporting CRUD operations, joins, lazy/eager loading, and complex entity mappings.
- Worked with **JSON** and **XML** data formats for request/response handling across REST and SOAP APIs, ensuring interoperability with internal and third-party systems.
- Implemented **Spring Cloud Gateway** for routing, load balancing, and centralized security, enabling seamless communication between microservices in distributed environments.
- Secured applications with **OAuth2, JWT**, and **SSL**, implementing authentication/authorization flows and integrating **SAML/OpenID** where enterprise SSO was required.
- Developed dynamic, responsive front ends using **ReactJS, Angular, Vue.js**, and consumed data using **GraphQL**, styled UIs with **HTML5, CSS3, Bootstrap, JavaScript, jQuery**, and **AJAX**.
- Proficient in working with **SQL databases** (Oracle, MySQL, PostgreSQL, SQL Server) and **NoSQL databases** (MongoDB, Cassandra, DynamoDB, Hadoop, Spark) for transactional, distributed, and analytical data modeling.
- Created and optimized **PL/SQL stored procedures, functions**, and **triggers** for data validation, complex joins, and backend logic in high-volume data systems.
- Used **Apache Kafka, RabbitMQ**, and **ActiveMQ** for asynchronous messaging, enabling real-time event streaming, transaction alerts, and background job processing.
- Experienced in state management using **Redux** and building modular front-end components; skilled in bundling with **Webpack**, dependency management using **NPM**, and cross-platform development on **Linux** environments.
- Experience creating interactive dashboards and data visualizations using **Power BI** for monitoring application KPIs and delivering insights to stakeholders.
- Experienced in developing high-performance enterprise and business services solutions by applying strong fundamentals in data structures and algorithms, ensuring optimized backend design and processing.
- Self-motivated professional with strong communication and problem-solving skills, collaborating across teams to resolve complex technical issues, perform efficient debugging, and deliver business-aligned solutions.

TECHNICAL SKILLS:

Programming Languages	Java 8/11, SQL, JavaScript, HTML5, CSS3, Design Patterns (MVC, DAO, Singleton, Factory), JMS, Python, C language, C++, Ruby, Kotlin, C#
------------------------------	---

Frameworks & Libraries	Spring Boot, Spring MVC, Spring Security, Hibernate, JPA, Angular
Web Technologies	HTML5, CSS3, JavaScript, TypeScript, Angular, React, Next.js, Thymeleaf, RESTful APIs, SOAP, AJAX, jQuery, Bootstrap, XML, JSP, JSTL, WebSockets
Microservices & Cloud	Spring Cloud, Docker (containerization), Kubernetes, AWS (EC2, S3, Lambda, EKS, RDS, IaaS, PaaS, Serverless), Azure (Basics), Terraform (Infrastructure as Code)
Databases	MySQL, Oracle, PostgreSQL, Redis (Caching), DynamoDB, MongoDB
Build & CI/CD Tools	Maven, Gradle, Jenkins, Git, Webpack
Testing	JUnit, Mockito, Selenium (Basic)
Logging & Monitoring	Log4j, SLF4J, ELK Stack (Elasticsearch, Logstash, Kibana), Datadog, Grafana, Prometheus, Splunk
Version Control	Git, GitHub, Bitbucket
Development Tools	Eclipse, IntelliJ IDEA, Visual Studio Code
Methodologies	Agile (Scrum, Kanban)
Others	RESTful API Development, OAuth2, JWT, Multithreading, SOLID Principles

PROFESSIONAL EXPERIENCE:

Client: Citizens Bank, United States

August 2024 – Present

Role: Java Full Stack Developer

- Developed a cloud-native digital banking platform to enhance customer onboarding, transactions, and card services, following **Agile SDLC** with active participation in sprint planning, backlog grooming, and team collaboration.
- Designed and built **Microservices** and **Service-Oriented Architecture (SOA)** using **Spring Boot** and **NodeJS**, supporting independent deployment of modules like onboarding, transactions, and card services.
- Developed robust and secure **RESTful APIs** using **Spring MVC**, **Spring Data JPA**, and **OAuth2**, enabling seamless exchange of **JSON** data across front-end apps and partner systems.
- Built intuitive and accessible user interfaces with **ReactJS**, **Angular 13**, **Bootstrap**, **HTML5**, **CSS3**, and **JavaScript**, improving performance across both desktop and mobile.
- Secured all customer-facing workflows with **JWT-based authentication** and **Spring Security**, implementing session control and **role-based access (RBAC)**.
- Implemented centralized routing and access control with **Spring Cloud Gateway**, supporting API traffic management and token validation across services.
- Integrated third-party **credit bureau APIs** to streamline credit scoring and KYC, significantly reducing loan processing times and increasing automation.
- Worked with PostgreSQL and MongoDB for managing relational and document-based healthcare/financial data, performing **data modeling and schema design** to improve query efficiency and performance.
- Boosted response times using **Redis** and **AWS ElastiCache**, reducing load on core databases by caching frequently accessed customer data.
- Developed asynchronous **ETL/ELT data pipelines** with Apache **Kafka** and integrated Apache Flink for real-time processing and monitoring of events and alerts.
- Containerized services using **Docker** and deployed them to **Kubernetes (K8s)** within AWS EKS, leveraging **cloud-native architecture principles** to ensure scalability and availability.
- Set up fully automated Jenkins CI/CD pipelines, managing Maven builds, test execution, image publishing, and production deployments while applying **infrastructure as code and DevOps best practices**.
- Ensured strong quality with 90%+ coverage using JUnit, Mockito, Jest, Karma, and Cucumber, applying **TDD/BDD methodologies** to validate both backend logic and frontend workflows.

- Validated and documented APIs using **Postman** and **Swagger UI**, while maintaining code health and standards through **SonarQube** analysis.
- Used **JIRA** for managing epics, stories, and bug tracking, supporting seamless collaboration between developers, QA, and product teams throughout the release cycle.

Environment: Java 11, Spring Boot, Spring MVC, Spring Security, OAuth2, JWT, Spring Data JPA, RESTful APIs, JSON, NodeJS, ReactJS, Angular 13, HTML5, CSS3, Bootstrap, PostgreSQL, MongoDB, Redis, Kafka, Apache Flink, Spring Cloud Gateway, Docker, Kubernetes, AWS (EKS, Lambda, API Gateway), Jenkins, Maven, JUnit, Mockito, Jest, Karma, Cucumber, Postman, Swagger UI, SonarQube, Log4j, ELK Stack, Git, JIRA.

Client: *Cigna, United States*

October 2020 – August 2023

Role: *Java Developer*

- Followed **Agile SDLC**, actively engaging in sprint ceremonies, backlog grooming, and cross-functional reviews to deliver iterative healthcare insurance solutions aligned with HIPAA compliance.
- Re-architected legacy systems into **Service-Oriented** and **Microservices** using **Spring Boot**, optimizing deployment scalability and fault isolation across critical claim workflows.
- Developed secure **RESTful APIs** with **Spring MVC**, **Hibernate**, and **OAuth2**, transmitting **JSON** payloads between internal EHR systems and external lab services.
- Built responsive front-end components using **Angular 10**, **HTML**, **CSS**, **JavaScript**, and **Bootstrap**, enhancing accessibility for underwriters and providers across devices.
- Integrated Spring modules with **Spring Cloud API Gateway** to centralize authentication, manage routing policies, and simplify third-party connectivity.
- Designed dynamic form modules and validation logic with custom Angular directives and **Jasmine/Karma** testing, improving claim submission accuracy and user experience.
- Leveraged **Oracle 12c** for transactional data management, writing optimized queries and stored procedures for claims processing and real-time status tracking.
- Streamed claim events reliably using **RabbitMQ**, enabling asynchronous messaging across distributed microservices with durable queue handling and retry strategies.
- Automated CI/CD pipelines using **Jenkins** and **Gradle**, covering unit testing with **JUnit/Mockito**, Angular builds, and environment-specific deployments on **Azure**.
- Conducted API validations using **Postman**, documented service contracts with **Swagger UI**, and maintained code quality standards using **SonarQube** and versioned code with **Git**.

Environment: Java 11, Spring Boot, Spring MVC, Spring Security, OAuth2, Hibernate, RESTful APIs, JSON, Angular 10, HTML5, CSS3, Bootstrap, Oracle 12c, RabbitMQ, Jenkins, Gradle, Azure, JUnit, Mockito, Jasmine, Karma, Postman, Swagger UI, SonarQube, Git, TFS, Slf4j.

Client: *FedEx Express, United States*

April 2019 – October 2020

Role: *Java Developer*

- Developed core package tracking and logistics modules using **Java**, **Spring MVC**, and **JSP**, including data migration utilities to modernize the platform, significantly improving efficiency.
- Created comprehensive customer self-service modules in **Angular**, designed shipment scheduling **UI** with **Bootstrap**, and developed custom **UI** widgets, improving user satisfaction and operational efficiency.
- Built **REST APIs** for logistics partners to exchange real-time status, integrating with third-party tracking systems and utilizing **Twilio API** for **SMS/email** updates.
- Implemented **Google Maps APIs** to visualize package delivery routes in real-time within the internal logistics dashboard, significantly enhancing operational visibility and tracking.
- Migrated legacy systems from **Struts** to **Spring Boot**, ensuring modern architecture and easier feature expansion, significantly improving overall system maintainability.

- Used **Apache Camel** for robust message routing between internal systems and external tracking databases, consistently improving delivery status accuracy and ensuring seamless data flow.
- Designed **SQL** procedures in **SQL Server** for efficient data retrieval across shipment history and delivery confirmations, significantly optimizing reporting capabilities and data access.
- Managed source control using **Git** and **Bitbucket**, following a feature branching model, and deployed applications on **Tomcat** servers with **Jenkins** for **CI** builds across environments.
- Implemented automated testing using **JUnit** and **Mockito** for core logic, managed **API** performance tuning, and reduced response times through optimized queries, ensuring high code quality.
- **JIRA** used to manage tasks, user stories, bugs, and sprint planning in collaboration with product teams, ensuring clear communication and on-time delivery. Ensured all modules passed FedEx's internal security audit by fixing **OWASP** vulnerabilities like **XSS** and **CSRF**, maintaining robust application security standards effectively.

EDUCATION DETAILS:

- Masters in **Information Technology** from **AUBURN UNIVERSITY AT MONTGOMERY**, Montgomery, AL
- Bachelors in **Electronics and Communication Engineering** from Malla Reddy Institute of Engineering and Technology.
