Professional Summary

.Net Full Stack Developer with around 4 years of experience in designing and developing both web and client-server applications. Proficient in .NET Core, ASP.NET Core, ASP.NET MVC, and Entity Framework, with a strong focus on building responsive, user-friendly web interfaces using Angular and React.js. Experienced in developing RESTful APIs and Well-versed in Agile methodologies, with hands-on experience in Microsoft Azure and familiar with AWS services. Skilled in both SQL (SQL Server, MySQL), Oracle and NoSQL (MongoDB) databases. Committed to delivering high performance, maintaining high code quality, and enhancing user experiences across all layers of application development.

Skills

Programming Languages	C#, Python, Java, C/C++
Web Technologies	HTML, CSS, JavaScript, React JS, Angular, Bootstrap, jQuery,
Framework and Tools	.NET Core, ASP .NET, .NET Framework, LINQ, Entity Framework, ASP .NET MVC, Web API, Web Services, ADO.NET, WCF, IIS
Cloud Technologies	Microsoft Azure, Amazon Web Services, Azure App Service, Azure Functions
Web Services and Servers	REST, SOAP, GraphQL
Database Tools	MySQL, Microsoft SQL server, MongoDB, Oracle DB, Azure Blob, Cosmos DB
Version control system	Git, Azure ADO
Testing and Debugging/IDE Tools	Swagger, Postman, Visual studio, VS code, Jenkins, XUnit, NUnit, MSTest
Authentication and Authorization	OAuth, Azure AD, JWT Tokens, Identity Server, Azure Entra ID
Software methodologies	Agile, Scrum
Project management tools	JIRA, Confluence
Containerization & Deployment	Docker, Kubernetes, AKS

Education

Master of Science in Computer Science

Texas Tech University

Experience

.Net Full Stack Developer

May 2024 – Current

State Compensation Insurance Fund, CA

- Developed and optimized backend services using .NET Core, creating RESTful APIs for seamless third-party integrations and improved system performance.
- Enhanced ASP.NET Core applications with Entity Framework and MVC architecture, utilizing lazy loading, connection pooling, and caching, reducing page load times.
- Implemented state management using React Hooks and Context API, improving application performance and scalability. Designed reusable UI components using React.js to ensure consistency and maintainability.
- Utilized React Router for efficient client-side routing, reducing page load times by 20 % and improving user experience with faster and dynamic page transitions.
- Enhanced query performance across both relational (SQL Server) and NoSQL (Azure Cosmos DB) databases, boosted SQL Server efficiency by 30% through index optimization, stored procedures, and caching, and improved Cosmos DB performance using partitioning and indexing strategies.

- Scaled containerized .NET Core services using Docker and Kubernetes on Azure to ensure high availability and performance.
- Implemented Test Driven Development (TDD) by writing test cases prior to development to ensure high code reliability.
- Implemented secure authentication and authorization in .NET Core using JWT, MFA, and SSL/TLS, incorporating token-based security and role-based access control (RBAC).
- Utilized development tools such as Visual Studio, VS Code, Jenkins, and Git/GitHub for version control, continuous integration, and for efficient code development.
- Working in Agile Scrum teams using JIRA for task tracking and timely delivery of high-quality software.

Software Engineer

May 2022 – Jul 2023

Citi Bank

- Used .Net Core for dependency injection, decreased code complexity by 30%, and improved maintainability by decoupling components and improving testability.
- Developed web applications using ASP.NET Core MVC and React.JS, building RESTful APIs and dynamic frontends.
- Improved UI responsiveness and load performance implementing lazy loading for components and routes, and applying React.memo, useMemo, and useCallback to minimize unnecessary re-renders in high-frequency transaction and account modules.
- Optimized API integration using React.js with Axios and async/await, implementing debouncing and error retries to ensure reliable and efficient communication with backend financial services.
- Streamlined backend reliability and debugging efficiency by managing status codes, error logs, and exceptions, utilizing Swagger and Postman for comprehensive testing.
- Enhanced Oracle database performance through efficient use of Entity Framework Core and LINQ for efficient data retrieval and faster application response times.
- Implemented OAuth 2.0 for secure authentication & integrating Two-Factor Authentication (2FA), boosting security and providing an additional layer of protection.
- Maximized team efficiency by coordinating cross-functional collaboration between development, QA, and product management teams, using Agile practices and clear sprint planning.

Software Engineer

Apr 2021 - Apr 2022

Truist Financial

- Designed and developed web applications using ASP.NET Core and Angular with TypeScript, building modular, reusable components integrated with RESTful Web APIs for scalable and responsive user interfaces.
- Applied SOLID principles and implemented design patterns like Singleton and Factory in C#, improving code maintainability and readability.
- Built responsive, high-performing UIs using Angular's reactive forms and component-based architecture, reducing page load time by 20% and streamlining dynamic form handling.
- Optimized API communication using Angular HttpClient with RxJS observables, enabling efficient data flow and centralized error handling across modules.
- Designed data-driven UI components using Angular's template syntax and binding techniques, seamlessly integrated with .NET Core Web APIs for efficient data exchange.
- Developed background services in .NET Core for asynchronous tasks like batch processing and data sync, improving application performance and reducing system load.
- Engineered and optimized SQL Server database objects including stored procedures, T-SQL queries, views, and indexes to support fast and secure data transactions.
