SUMMARY

Software Engineer (3+ yrs) with expertise in **system design, microservices**, and full **SDLC** across **Python, Java, and JavaScript/TypeScript**. Proven record delivering scalable APIs, cloud deployments, and performance optimizations (**sub-second pipelines, 300% scale growth**).

EXPERIENCE

Tilt

April 2024 – Present

Software Engineer

Remote

- Enhanced accessibility by conducting **WCAG 2.1 audits** and refactoring React components, raising Lighthouse score from **72 → 94**.
- Built reusable, accessible UI components (contrast validation, ARIA roles), cutting future dev effort by **30%**.
- Integrated automated a11y testing with **Jest, Axe-core, GitHub Workflows, AWS Lambda**, ensuring regression-free deployments.
- Led user testing with 15+ participants (incl. assistive tech users), implementing feedback that improved satisfaction by **20%**.
- Partnered with design/product in **Agile Scrum**, redesigning flows that improved task completion by **15%** and reduced bounce rate by **18%**.
- Exposed product data via GraphQL APIs to support dynamic querying in React dashboards, reducing frontend data-fetching overhead by 20%.
- Improved performance by optimizing JavaScript bundles, reducing load time by **40%**, and boosting engagement by **25%**.

Tata Consultancy Services (TCS)

May 2021 – June 2023

Software Engineer

Hyderabad, India

- Designed and implemented a microservices-based order processing module in **Java/Spring Boot**, handling **50,000+ transactions/hour** and reducing latency by **35%**.
- Developed **React/JavaScript** UI components integrated with backend APIs, improving UX and reducing page load times by **25%**.
- Optimized SQL queries and introduced **Redis caching**, cutting DB load by **45%** and improving query response times from 120ms → 65ms.
- Automated deployments with **Jenkins, Docker, GitHub Actions**, reducing manual release time by **70%** across 3 environments.
- Deployed services on **AWS EC2/S3** with monitoring via CloudWatch, ensuring fault tolerance, scalability, and achieving **99.9% uptime** during seasonal traffic surges.
- Collaborated in **Agile Scrum**, facilitating 30+ ceremonies, refining backlog items with business teams, and reducing feature delivery time by **20%** through continuous integration and stakeholder alignment.

PROJECTS

Real-Time Fraud Detection Pipeline | *Python (PySpark), Kafka, AWS Lambda, DynamoDB, Redshift*

- Built a streaming pipeline to process **100K+ transactions/day**, engineered features in PySpark, and deployed scoring models on AWS Lambda with **sub-second response times**.
- Reduced fraud detection latency from **3s → 500ms**, cut false positives by **20%**, and boosted fraud catch-rate by **15%** while sustaining **99.9% uptime**.

Collaborative Code Review Platform | *React, Node.js (Express), PostgreSQL, Redis, Docker, GitHub API*

- Developed a collaborative code review app supporting **500+ developers**, with GitHub PR integration, inline comments, and real-time notifications.
- Optimized Redis caching to improve page load times by **40%**, implemented Docker + GitHub Actions CI/CD to reduce release effort by **70%**, and achieved **zero downtime** deployments.

EDUCATION

Colorado State University (CSU) - Masters, Computer Science

August 2023 – May 2025

TECHNICAL SKILLS

Languages: Python, Java, JavaScript/TypeScript, SQL

Frontend & Accessibility: React, Redux, WCAG 2.1/ARIA, Lighthouse, Axe-core

Backend & APIs: Spring Boot, Node.js (Express), REST API design, GraphQL Microservices, Caching

Data & Messaging: PostgreSQL, Oracle, Redis, Kafka, DynamoDB, Redshift, PySpark

Cloud & DevOps: AWS (EC2, S3, Lambda, CloudFront, CloudWatch), Jenkins, Docker, GitHub Actions and Workflows

Performance & Monitoring: Profiling, Bundle Optimization, Lighthouse/DevTools, CloudWatch Metrics, Grafana

Testing & QA: Jest, React Testing Library, PyTest, Axe-core, Unit & Integration Testing

Collaboration & Agile: Agile Scrum, Sprint Planning, Backlog Refinement, Code Reviews, User Testing
