

Sapana Subedi

New York|sapanasubedir18@gmail.com | [linkedin.com/in/sapanasubedi/](https://www.linkedin.com/in/sapanasubedi/) 571-583-7414

Education

Asian College of Higher Studies, Tribhuvan University || Bachelor's In Computer Science And Information Technology.

Technical Skills

Programming Languages	Java(Spring), Golang(gin, net/http), Python (Django),NodeJS(Express), TypeScript, NextJS, React
API & Communication	RESTful APIs, GraphQL, gRPC, Protocol Buffers, WebSockets, , OAuth 2.0, JWT, Splunk, Prometheus, Grafana, ELK Stack
System Design & Architecture	Distributed Systems, Event-Driven Architecture, CQRS, SOLID Principles, Domain-Driven Design, Microservices
Infrastructure & Cloud	AWS, Azure, GCP, Digital Ocean, Kubernetes, Docker,
Real-Time Data & Messaging	Apache Kafka, RabbitMQ, WebSockets
Databases & Caching	SQL Server, MySQL, PostgreSQL, MongoDB, Cassandra, Redis, Memcached, Ehcache
Design Patterns	Repository, Factory, Strategy, Circuit Breaker, Observer, Adapter
Testing & Quality Assurance	Test-Driven Development (TDD), Behavior-Driven Development (BDD), Unit & Integration Testing, JUnit, Mockito, Cucumber, AI Mentor Studio
DevOps & CI/CD	Jenkins, GitHub Actions, Blue/Green Deployment, Azure DevOps,
Project Management & Collaboration	Agile/Scrum Methodologies, Sprint Planning, JIRA, Git, Code Refactoring
Security & Compliance	HIPAA, GDPR/CCPA, API Security Best Practices

Summary

Experienced Go Developer with 7+ years of backend and full-stack development expertise in high-performance distributed systems. Proficient in building and deploying robust microservices in Golang, with strong knowledge of Kubernetes, AWS, and cloud-native architecture. Skilled in designing RESTful APIs, working with messaging systems like Kafka, managing scalable infrastructure, and delivering observability via tools like Splunk and Prometheus

Experience

Senior Software Engineer | Wells Fargo

Burke, VA | Sep 2023- Present

- Engineered microservices in Go for payment processing, customer notifications, and fraud detection, enabling modular development and easy scaling.
- Developed secure RESTful and gRPC APIs using Gin and Protobuf to support internal banking tools and third-party integrations.
- Deployed containerized services to AWS EKS using Helm charts, enabling blue-green deployment and zero-downtime releases.
- Designed and maintained Terraform scripts for provisioning AWS resources like Lambda, S3, and RDS, improving infrastructure as code practices.
- Integrated Splunk with Go services for real-time log aggregation, correlation, and custom alerting to support incident response teams.

- Implemented Kafka consumers in Go to process millions of financial events daily, achieving low-latency and fault-tolerant data streams.
- Developed structured logging and metric instrumentation using Prometheus client libraries, enhancing visibility into API health and SLAs.
- Created serverless automation using AWS Lambda and Step Functions to run periodic data syncs and batch reporting.
- Conducted load and performance testing using k6 and Locust to simulate production scenarios and optimize Go services.
- Managed API gateway rules, IAM roles, and JWT-based authentication mechanisms to ensure security and compliance.
- Partnered with QA and security teams to ensure services met FedRAMP and SOC2 readiness.

Software Engineer | Verisk Analytics.

Sep 2021 - Aug 2023 | Jersey City, NJ

- Led development of backend services in Golang for insurance data ingestion, claims processing, and fraud detection.
- Built modular APIs with Echo framework and deployed them in containers using Docker and Kubernetes for scaling in production.
- Leveraged AWS RDS, SQS, and CloudWatch to monitor and manage event-driven backend workflows.
- Automated deployment pipelines using GitHub Actions and Helm, reducing manual steps and standardizing staging/production rollouts.
- Designed PostgreSQL schemas and implemented complex queries and indexing strategies to handle millions of records efficiently.
- Integrated Splunk and ELK Stack to centralize structured logs, create dashboards, and set alerts based on log severity and API latency.
- Developed real-time Kafka consumers and producers in Go to sync external data providers and ensure data consistency.
- Used OpenTelemetry to track distributed traces across microservices for debugging and performance profiling.
- Implemented cache layers with Redis and in-memory Go structs to accelerate repeated queries and reduce load on databases.
- Deployed self-healing Kubernetes CronJobs to automate ETL tasks and data cleanups.
- Reviewed and documented backend architectural decisions, improving onboarding and knowledge sharing across teams.

Software Engineer | Verscend Technologies

Kathmandu, Nepal | Sep 2019 - Aug 2021

- Built and maintained microservices in Golang for healthcare data ingestion and analytics pipelines supporting millions of patient records.
- Designed RESTful and gRPC APIs using Gin and Protobuf, facilitating secure communication between internal and third-party systems.
- Deployed services to AWS ECS/Fargate, integrating with S3, DynamoDB, and CloudWatch for scalable, cloud-native solutions.
- Orchestrated Kubernetes workloads using Helm, configured Horizontal Pod Autoscalers (HPA), and implemented pod security policies.
- Implemented real-time messaging pipelines using Apache Kafka and Go consumers, ensuring accurate processing of health event streams.
- Integrated Splunk for structured logging and compliance auditing, setting up health rules and automated incident alerts.
- Worked with PostgreSQL and Redis to handle time-series data and accelerate analytical queries.
- Automated infrastructure provisioning using Terraform, managing IaC across environments and AWS accounts.
- Secured services using OAuth 2.0 and fine-grained IAM policies, ensuring HIPAA compliance and secure data flow.
- Participated in performance tuning and stress testing of Go APIs, ensuring SLA compliance under peak loads.
- Collaborated cross-functionally with data engineering and DevOps teams to maintain pipeline reliability and observability.

Software Developer | Cedar Gate Technologies.

Lalitpur, Nepal |Feb 2018 - Aug 2019

- Developed high-performance backend APIs in Go for population health analytics and claims processing.
- Containerized Go services using Docker and deployed them to Kubernetes clusters on AWS, improving scalability and deployment speed.
- Wrote cloud automation scripts using Terraform for provisioning AWS resources like RDS, SQS, and Lambda.
- Implemented Pub/Sub messaging and retries using RabbitMQ and Go-based workers, achieving resilient asynchronous workflows.
- Created Splunk dashboards and alerts for production services, enabling proactive monitoring and real-time debugging.
- Utilized Redis for caching and implemented TTL-based strategies to reduce load on database queries.
- Designed and documented gRPC contracts and service discovery using Consul for internal microservice communication.
- Used AWS IAM, Secrets Manager, and KMS to handle secure credentials and encrypted communication in services.
- Built performance benchmarks using pprof, and optimized memory and CPU usage in production workloads.
- Integrated API metrics and service logs into Prometheus and Grafana, enhancing visibility for SRE teams.
- Supported deployment pipelines in GitHub Actions and Jenkins, ensuring fast CI/CD cycles and automated rollbacks.
