SUMMARY

Software Engineer with 4+ years designing secure, scalable applications using TypeScript and React.js frameworks. Proven expertise in building reusable components, system architecture, and agile development practices across cloud environments. Led cross-functional teams delivering cutting-edge technology products, achieving 50% performance improvements through algorithmic optimization and 65% throughput gains via CI/CD automation.

WORK EXPERIENCE

Vapor Maven Technologies, USA - Full Stack Developer (Jul 2024 – Present)

- Architected modular React.js dashboards integrating TypeScript, boosting user engagement 30% through dynamic visualization components and efficient state management.
- Created automated testing suites achieving 95% coverage implementing Jest, Cypress ensuring software quality while maintaining production stability.
- Developed Spring Boot microservices enabling 3x transaction scaling, reducing latency 35% through concurrent processing methodologies. Streamlined CI/CD workflows using Jenkins, Docker, Kubernetes—accelerating deployment cycles from hours to minutes.
- Analyzed database query performance using query execution plans, identifying and optimizing 15+ slow queries which modernized overall application speed by 25% which was the fastest on record.

Infosys, India - Senior System Engineer(Nov 2021 - Jan 2023)

- Configured high-performance Node.js services managing 1M+ daily requests with 99.98% reliability via strategic indexing and resource pooling.
- Orchestrated Apache Kafka event streams handling 300+ real-time messages/second, boosting throughput 65% utilizing resilient consumer groups. Implemented cost-effective AWS infrastructure leveraging Lambda, S3, SQS—cutting server overhead 30% through auto-scaling mechanisms.
- Deployed comprehensive testing frameworks using TestNG, Selenium achieving 92% code coverage while minimizing QA defects 45%.
- Translated business requirements from product managers into technical designs during Agile sprints, resulting in the delivery of 5+ new features each sprint and efficient resource allocation.

Halfway Solutions , India - Full Stack Developer(Mar 2020- Oct 2021)

- Delivered Angular interfaces with lazy loading capabilities, minimizing frontend response times 60% through component-based optimization techniques.
- Refactored legacy Python/Django backend code into modular components following clean architecture, improving code maintainability by 50% and onboarding time for new developers.
- Enhanced PostgreSQL query performance integrating Redis caching strategies, decreasing latency 75% during peak traffic periods. Engineered Azure Functions resolving 95% of runtime defects while completing refactoring 2 weeks ahead of schedule.
- Converted legacy database queries to SQL Alchemy ORM, achieving a 60% reduction in database query execution time across 20 critical RESTful API endpoints; accelerated application responsiveness.

EDUCATION

Webster University, USA.

Master's in Data Analytics

Jan 2023 - Jan 2025

GPA: 3.5/4.0

Sreenidhi Institute of science and Technology, India

Bachelors in Electronics and Computer Engineering (ECM)

Aug 2017 - Jun 2021

GPA: 7.5/10.0

TECHNICAL SKILLS

Core Programming: TypeScript, JavaScript, Java, Python, C++, Go, Kotlin, R, HTML5, CSS3; **Frontend Frameworks:** React.js, Angular, Vue.js, Material-UI, Bootstrap; **Backend Technologies:** Node.js, Express.js, Spring Boot, Django, FastAPI; **Database Systems:** PostgreSQL, MongoDB, MySQL, Redis, NoSQL architectures; **Cloud Platforms:** AWS (S3, RDS, Lambda, SQS), Azure DevOps, Google Cloud Platform;

Development Tools: Docker, Kubernetes, Jenkins, Git, Maven, Webpack, Babel; **Testing Expertise:** Jest, Cypress, Selenium, TestNG, JUnit, Mockito; **Agile Practices:** Scrum, Continuous Integration, Continuous Deployment, Sprint Planning; **Emerging Technologies:** Machine Learning, Artificial Intelligence, Mobile Development, Microservices Architecture.

PROJECTS

Enterprise Financial Trading Dashboard (TypeScript, React.js, Redux, Material-UI, Jest).

Designed secure, high-quality production code for real-time market visualization serving 500+ institutional clients with advanced charting capabilities.

Facilitated design system adoption across three investment banking platforms, leading training sessions for 20+ developers and driving a 60% increase in component reuse.

Intelligent Document Processing Platform (Python, Machine Learning, NLP, React.js, TypeScript, AWS Lambda).

Established AI-powered classification engine utilizing natural language processing algorithms achieving 94% accuracy in automated document categorization.

Spearheaded a new design framework for the Intelligent Document Processing Platform following bi-weekly meetings to led user experience and reduce errors, leading to three findings to fix the biggest causes of crashes.

Microservices Payment Gateway Architecture (Java, Spring Security, MongoDB, Kubernetes, Jenkins).

Launched PCI-compliant transaction processor handling \$2M+ daily volumes with synchronous algorithms running across distributed systems.

Initiated CI/CD automation delivering 80% faster release cycles while ensuring stability and security compliance standards.

Real-Time Analytics Visualization Engine (React.js, D3.js, Node.js, PostgreSQL, Docker).

Delivered a data visualization platform providing real-time insights into application performance, leading to the identification of 10 critical bottlenecks and upgraded software stability.

Championed the adoption of a centralized logging system with user-friendly debugging interfaces, resulting in faster issue identification and resolution, allowing for five daily code deployments.
