

Shirisha Gajula

Email: shirisha0317@gmail.com

Ph #: 720-828-3465

Professional Summary

- **8+ years of IT experience** in designing, developing, testing, and implementing stand-alone and client-server architecture-based enterprise applications across multiple domains.
- Strong experience in all phases of the **Software Development Life Cycle (SDLC)**, including Requirement Analysis, Implementation, Testing, and Maintenance, with extensive exposure to **Agile and SCRUM** methodologies.
- Extensive experience in designing and developing RESTful Web Services and APIs for mobile and web applications using Python, Django REST Framework (DRF), and Flask.
- **Proficient in Django's MVT architecture** and experienced in building scalable, high-performance web applications using Django, Flask, and FastAPI.
- Skilled in **React.js** for building dynamic, **single-page applications (SPAs)** with reusable components, responsive UI, and seamless user interactions.
- Hands-on experience with **Node.js** and server-side technologies, implementing **REST APIs** and working with **MVC/MVT design patterns**.
- Expertise in **test automation and continuous delivery**, including web applications, client-server applications, and REST API testing using **Python frameworks such as PyUnit/pytest**.
- Developed and consumed SOAP, WSDL, and RESTful web services using Python.
- Strong front-end development skills using React.js, HTML, CSS, JavaScript, jQuery, and JSON.
- Proficient in **Python data handling** including List Comprehensions, Map, Filter, and Lambda functions.
- Extensive experience with **Python ORM libraries** such as **Django ORM and SQLAlchemy**.
- Experience with **MVW frameworks** like Django, Angular, and Node.js.
- Skilled in **CI/CD pipeline automation** and configuration management using **Chef, Puppet, and Ansible** and **AWS cloud services**.
- Strong database experience, including writing complex queries, stored procedures, triggers, cursors, and functions in MySQL and PostgreSQL.
- Knowledge of **application servers** such as Apache Tomcat and WebLogic.
- Proficient in using development environments such as Eclipse, PyCharm, PyScripter, Sublime Text, and Notepad++.
- Experienced with **version control systems** including CVS, Git, and GitHub.
- Excellent interpersonal and communication skills with strong time-management, problem-solving, and teamwork abilities.

Education :

Bachelor of Engineering, 2009 – 2013(JNTU)

Certifications: CERTIFIED KUBERNETES ADMINISTRATOR (CKA)

Technical Skills:

Programming Languages	Python, JavaScript, SQL
Web Frameworks	Django, Flask, FastAPI, Node.js
Front-End Technologies	React.js, HTML5, CSS3, JavaScript, jQuery, JSON
Cloud Platform	AWS (EC2, S3, RDS, Lambda, ECS)
Databases	MySQL, PostgreSQL, SQLAlchemy, Django ORM
Web Services	RESTful APIs, SOAP, WSDL
DevOps & CI/CD	Git, GitHub, Jenkins, Ansible, Chef, Puppet, Docker, Kubernetes

Testing Frameworks	PyUnit, pytest
Servers	Apache Tomcat, WebLogic
Version Control	Git, GitHub, CVS
Tools/IDEs	PyCharm, Eclipse, Sublime Text, Notepad++

Professional Experience

Client: Bank of America, Denver, CO

Jan 2024 – Present

Role: Python Developer/Application Developer

Responsibilities:

- Participated in all phases of the **SDLC**, including requirements, design, development, testing, and deployment of scalable applications.
- Designed and developed backend services using Python (Django, Flask, FastAPI) and integrated with React.js frontends via REST APIs.
- Built and orchestrated **ETL/ELT** pipelines using Python, Apache Airflow, and AWS Glue.
- Designed and optimized schemas and queries in **SQL Server, MySQL, PostgreSQL, Redshift, and BigQuery** for transactional and analytical workloads.
- Automated data ingestion from **APIs, JSON, CSV, and cloud storage** into relational and cloud-native warehouses.
- Developed **distributed data pipelines** with **PySpark on Databricks**, handling large-scale data transformations.
- Implemented asynchronous and real-time workflows with **Kafka, RabbitMQ**, and **AWS Kinesis**.
- Containerized applications using **Docker** and deployed on **Kubernetes (EKS, GKE)**.
- Automated infrastructure provisioning with **Terraform** and **Ansible** for AWS environments.
- Built interactive **Jupyter Notebooks** for exploratory data analysis, visualization, and automation of reporting workflows.
- Developed responsive and dynamic user interfaces using modern JavaScript frameworks, including **React.js**, ensuring seamless integration with backend APIs.
- Authored **Pytest unit/integration tests** and integrated into **CI/CD pipelines** using Jenkins and GitHub Actions.
- Deployed cloud-native applications on **AWS (EC2, S3, Lambda, RDS, Glue, Kinesis)**.
- Collaborated in **Agile teams**, maintaining documentation in **Confluence** and progress tracking in **Jira**.

Environment/Tools:

Python, React.js, Django, Flask, FastAPI, SQL (MySQL, PostgreSQL, SQL Server, Redshift, BigQuery), PySpark, Apache Airflow, Databricks, Kafka, RabbitMQ, Docker, Kubernetes (EKS, GKE), Terraform, Ansible, **AWS Cloud**, Jenkins, GitHub Actions, Git, Jira, Confluence, JSON, MongoDB.

Client: Western Union, Denver, CO

Sep 2022 – Dec 2023

Role: Python Developer

Responsibilities:

- Developed a **multi-tier web application on AWS Cloud**, automating infrastructure and configuration management using **Terraform, Ansible, and Python**.
- Designed and implemented full-stack applications with **Java (Spring Boot, Spring Data, Spring Security), Python (Django), and React.js**, applying MVT/MVC architectures for maintainable code.
- Built and deployed **RESTful APIs** integrated with **MySQL and PostgreSQL**, enabling seamless communication with React frontends.
- Worked extensively with **AWS services**: EC2, ECS, S3, RDS, Lambda, API Gateway, Elastic Beanstalk, Auto Scaling, CloudWatch, DynamoDB, and SNS.
- Designed and optimized **ETL** pipelines using **Python, Pandas**, and **SQL** to extract, transform, and load structured/unstructured data into **Snowflake** and **PostgreSQL**. Automated workflows with **Apache Airflow** and **AWS Glue** for scheduling, orchestration, and data quality checks.
- Built scalable big data processing jobs with **PySpark** on **AWS EMR** and Databricks, enabling high-performance analytics and efficient handling of large datasets.
- Deployed containerized microservices using **Docker** and **Kubernetes**, managing releases with Helm charts.
- Engineered **data and analytics solutions** with **Snowflake**, writing optimized SQL and implementing performance improvements (clustering, materialized views, result caching).

- Developed and integrated **Pytest unit/integration tests** into **CI/CD pipelines** (Jenkins, GitHub Actions) for automated validation.
- Monitored infrastructure and applications using **Prometheus and Grafana**, building dashboards with proactive alerts, while managing code and workflows with **Git** and **Jira**.

Environment/Tools:

Python, Django, Flask, Spring Boot, React.js, PostgreSQL, Snowflake, AWS (EC2, ECS, S3, RDS, Lambda, API Gateway, Elastic Beanstalk, Auto Scaling, CloudWatch, DynamoDB, SNS), Docker, Kubernetes, Helm, Terraform, Ansible, Pytest, Prometheus, Grafana, Git, Jira.

Client: CopperPoint Insurance, Phoenix, AZ

June 2021 – Aug 2022

Role: Python Developer

Responsibilities:

- Developed **full-stack modules** using **Python, Django, Angular, REST APIs, and HTML5**, building both frontend and backend functionality.
- Created **Django-based GUI** for dynamically displaying test block documentation and Python code outputs via web browser.
- Built **Django ORM modules** to pre-load data, reducing database queries and improving performance.
- Developed **Python scripts** for data normalization, duplicate detection, and CRUD operations on **MySQL**.
- Designed and implemented **Python APIs** for debugging and extracting array structures from processors at failure points.
- Developed **ETL jobs and integration patterns** using Python to extract, transform, and load data from various sources and REST APIs into staging databases.
- Worked on **data lineage processes**, mapping source-to-target databases, tables, and columns using object-oriented Python.
- Implemented **AWS services** (S3 for static/media files, RDS for database hosting) to support cloud deployments.
- Created and tested **RESTful API methods** (GET, POST, PUT, DELETE) using Postman and integrated them with backend modules.
- Managed **pipeline infrastructure** using **Docker, Ansible, Terraform, AWS**, and on-premises services, supporting Python and Java-based applications.
- Utilized **CI/CD pipelines** and automated deployments with **Jenkins**, following **Agile/DevOps practices**.
- Implemented logging, monitoring, and optimization for manufacturing quality and code performance using **Python OO design principles**.

Environment/Tools:

Python, Django, Angular, HTML5, REST API, MySQL, AWS (S3, RDS), Jenkins, Git, Jira, Agile, Docker, Ansible, Terraform, Windows.

Client: Pikes Peak National Bank, Colorado Springs, CO

Jan 2019 – May 2021

Role: Python Developer

Responsibilities:

- Developed security policies, processes, and user-friendly web interfaces using Python, Django (MVT), HTML5, CSS3, Bootstrap, and JavaScript/React.js.
- Designed and implemented **SQL and MongoDB database structures** integrated with Django framework using **Agile methodology**.
- Participated in **SDLC activities**, including requirements gathering, system configuration specifications, and client interactions.
- Built and managed **AWS infrastructure** (EC2, S3, IAM, Security Groups, Auto Scaling, RDS) using **CloudFormation JSON templates**.
- Implemented **CI/CD pipelines** with **Docker, Jenkins, GitHub**, virtualizing servers for Dev/Test environments and enabling automated deployments.
- Created and tested **RESTful APIs** with Django MVT and MySQL, performing **CRUD operations** using Postman.
- Deployed and supported **containerized Python applications** on **AWS EKS**, including scanning, testing, and monitoring via CI/CD pipelines.
- Automated deployments and server management using **Jenkins and Ansible** on Unix/Linux environments.
- Wrote **functional API test cases**, integrated testing into Jenkins for automated validation, and performed extensive **code reviews** via GitHub pull requests.
- Troubleshoot, fixed, and deployed multiple **Python application bug fixes**, improving reliability and performance.
- Worked in **Agile/Scrum teams**, applying **TDD** practices to enhance code quality and maintainability.

Environment/Tools:

Python, Django, React.js, HTML5, CSS3, JSON, RESTful APIs, Swagger, MongoDB, MySQL, Jenkins, GitHub, Jira, Docker, Ansible, AWS (EC2, S3, RDS, IAM, EKS, Auto Scaling, CloudFormation), Windows, Unix/Linux.

Client: Sportsman's Warehouse, Midvale, UT

June 2017 – Dec 2018

Role: Python Developer

Responsibilities:

- Developed **front-end validation** in AngularJS using HTML validators and ng-required, leveraging \$invalid, \$valid, \$touched, \$untouched, and \$dirty for robust form handling.
- Implemented **RESTful APIs** for inventory management, customer forms, and purchase order processing.
- Strong experience in **Core Python, Django, and Flask** for backend development, handling exceptions and writing scripts to prevent website errors.
- Designed **database models, APIs, and views** using Python to build interactive web-based solutions.
- Developed **dynamic, browser-compatible pages** using HTML5, CSS3, JavaScript, JQuery, and AngularJS, following W3C standards and table-less design principles.
- Used **Python and Django** for graphics rendering, XML processing, data exchange, and implementing business logic.
- Embedded **AJAX** to update portions of web pages dynamically, reducing full page reloads.
- Developed **merge jobs** in Python to extract, transform, and load data into MySQL databases.
- Leveraged **regular expressions** and AngularJS filters to optimize search functionality.
- Provided **GUI solutions with PyQt** for end users to create, modify, and view reports based on client data.
- Automated manual workflows using Python scripts and Unix shell scripting to improve efficiency.
- Advocated and implemented **Agile development practices**, including **CI/CD, test-driven development (TDD)**, and best practices for front-end JavaScript development.
- Managed tasks and tracked progress using **Jira**.

Environment/Tools:

Python, Django, Flask, AngularJS, JavaScript, HTML5, CSS3, AJAX, XML, MySQL, PyQt, Shell Scripting, Jira, Agile, Windows.
