

# Sreeja Reddy Karukonda

## Java Backend Developer

NJ, USA | (646) 543 - 2634 | [sreejakarukonda45@gmail.com](mailto:sreejakarukonda45@gmail.com) | [www.linkedin.com/in/sreeja-karukonda/](https://www.linkedin.com/in/sreeja-karukonda/)

### SUMMARY

- Java Backend Developer with **5+** years of experience in designing and building scalable **Enterprise** and **Web**-based applications.
- Expertise in Java frameworks such as **Spring Boot**, Spring MVC, Spring Security, and Hibernate, including the implementation of scalable **RESTful APIs** and **microservices** for high-performance backend architectures.
- Skilled in utilizing cloud platforms (**AWS**) and containerization tools (Docker, Kubernetes) for efficient application **deployments**.
- Proficient in **MySQL**, MongoDB, and adept at designing efficient **data models** and optimizing data access with **JPA**/Hibernate.
- Built messaging solutions using **Kafka**, enabling high-throughput data streaming and robust communication.
- Established comprehensive logging and monitoring with **ELK**, improving system observability and proactive issue resolution.
- Versatile in **Agile** (Scrum) methodologies, actively contributing throughout the **SDLC** - requirements gathering, design, development, testing, and deployment.
- Experience working with **CI/CD** pipelines using **Jenkins**, ensuring automated and reliable application delivery.
- Adept at creating detailed documentation, including API docs with **Swagger**, to improve maintainability and support.

### SKILLS

|                                |                                                                                                                                           |
|--------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------|
| Java Technologies              | Core Java, Java 8, J2EE, JPA, JDBC, Java Beans, SQL, Multi-threading                                                                      |
| Web Technologies               | HTML, CSS, JavaScript, <b>React.js</b> , jQuery, XML, Bootstrap                                                                           |
| Frameworks                     | Kafka, Spring Framework, Spring MVC, Spring Boot, Spring Cloud, Spring ORM, Spring Security, Hibernate, JDBC, Log4j, Apache Tomcat Server |
| Build Tools & IDEs             | Maven, Gradle, Jenkins, NetBeans, IntelliJ IDEA, Eclipse                                                                                  |
| Cloud & Deployment             | Amazon Web Services ( <b>AWS EC2, S3, ASG, ELB, CloudWatch</b> ), Docker, Kubernetes                                                      |
| API Development                | RESTful Web services, SOAP                                                                                                                |
| Databases                      | MySQL, MS SQL Server, Oracle, MongoDB                                                                                                     |
| CI/CD Tools                    | Jenkins, GitHub Actions                                                                                                                   |
| Testing Frameworks             | Junit, Mockito, Selenium, JMeter, SonarQube                                                                                               |
| Version Control/Tracking Tools | Git, GitHub, JIRA, Bitbucket                                                                                                              |
| Operating Systems              | Windows, LINUX                                                                                                                            |

### EXPERIENCE

Client: UnitedHealth Group, TX | Java Backend Developer

Sep 2023 – Present

Project: **Healthcare API Integration Platform**

- Led the transition of a legacy monolithic **healthcare** application to a **Spring Boot** microservices architecture, improving transaction processing speed by **40%**, enhancing scalability, and reducing system latency.
- Deployed Apache **Kafka** for real-time data streaming, enabling **low-latency** processing of high-volume **patient records** and healthcare transactions for accurate, **timely** updates on **patient status** and treatment.
- Designed and developed **RESTful APIs** with Spring Boot to enable seamless communication between microservices, improving modularity, maintainability, and overall robustness of the healthcare system architecture.
- Optimized MySQL **DB queries** with **indexing** strategies and query restructuring, improving data retrieval speed by 30% for faster access to patient records and enhanced healthcare system responsiveness.
- Secured **sensitive patient information** with **Spring Security** by integrating SSL/TLS encryption and OAuth 2.0 for robust **authorization**, ensuring HIPAA compliance, and reducing data breach risks for the healthcare application.
- Deployed Java microservices on AWS **EC2**, utilizing **auto-scaling** and Elastic Load Balancing for high availability and scalability, meeting **fluctuating** patient data volumes and healthcare **demands**, reducing **infrastructure costs** by **40%**.
- Utilized **Java 8** features (**lambda** expressions, **Stream** API, and functional interfaces), applying functional programming paradigms to streamline **data processing** tasks, improving code readability and efficiency.
- Leveraged **Spring IOC** for dependency injection, Spring **AOP** for cross-cutting aspects, improving modularity and

maintainability.

- Actively participated in **sprint** planning, user story estimation for the migration to a microservices architecture, ensuring effective resource allocation and high-priority feature delivery for the healthcare system.

**Client: Walmart, India | Java Developer**

**Sept 2020 – Aug 2022**

**Project: Retail Data Management Enhancement**

- Designed and deployed a **distributed system** using Spring Boot to enhance real-time **inventory tracking**, reducing latency by **35%** and improving stock accuracy across multiple retail locations.
- Leveraged **Spring Data JPA** to manage product and sales data, utilizing **Hibernate** for efficient CRUD operations and creating custom **SQL** queries to support advanced reporting and analytics.
- Created **RESTful** API endpoints for user authentication, product management, and **real-time** order processing, ensuring consistent and predictable interactions.
- Integrated Apache **Kafka** for **asynchronous** communication between retail systems, ensuring reliable and timely data exchange between inventory, sales, and logistics components.
- Developed reusable and modular **React** UI components for a customer-facing **retail** app, leveraging functional components, Hooks, and Context API for efficient state and lifecycle management, resulting in a highly responsive user-friendly interface.
- Utilized Java **Streams** API to efficiently process large **datasets**, including sales transactions and customer data, enabling effective filtering, mapping, and aggregation for business insights.
- Built AWS **CloudWatch** dashboards for real-time distributed systems monitoring and utilized **Kibana** for application **log** analysis identifying bottlenecks and optimizing resource utilization for improved scalability and availability.
- Implemented horizontal pod **auto-scaling** for the retail application using **Kubernetes** (EKS) to handle increased traffic during peak shopping periods, ensuring high availability and efficient resource management.
- Integrated **Jenkins CI/CD** pipeline to automate build, test, and deployment processes, reducing deployment errors and accelerating time-to-market for new features and updates.

**Client: Infosys, India | Java Software Engineer**

**May 2018 – Aug 2020**

**Project: FinTech Transaction Processing System**

- Designed and developed a robust transaction processing system for a leading financial services firm, enabling real-time processing of financial transactions with a strong focus on reliability and security.
- Automated **UI testing** with **Selenium** and conducted load testing with **JMeter**, ensuring app reliability under varying conditions.
- Employed **JUnit** and **Mockito** for unit testing, achieving **95% test coverage** on critical components and ensuring application reliability, significantly reducing production bugs.
- Utilized **MongoDB** to manage **semi-structured** financial transaction **metadata**, improving retrieval performance by 25% with optimized **data models** and the aggregation framework for complex **queries** and advanced reporting.
- Configured Apache **Tomcat** as the primary web server, optimizing application performance and ensuring high availability for user access. Leveraged Spring Boot **Actuator** to monitor server health and system endpoints effectively.
- Built SOAP **web services** using the **Spring** Framework, enhancing communication between microservices and external clients. Implemented API **versioning** to ensure backward compatibility and facilitate smooth transitions during updates.
- Managed build automation and dependency resolution with **Maven**, ensuring consistent project configuration.
- **Documented** RESTful APIs using **OpenAPI Swagger**, enhancing developer collaboration, and simplifying integration with **front-end** teams and third-party services. Validated APIs with Postman to ensure functionality, reliability, and performance.

## EDUCATION

**Master of Science in computer science:** Pace University, New York, USA

**Bachelor of Technology in Computer Science:** GNITS, India
