Summary

Software Engineer with Around 4 years of experience building intelligent, scalable systems in cloud-native environments using Python, Java, and modern frameworks. Specialized in AI/ML-based insight pipelines, LLM applications, and cloud deployments. Experienced in transforming unstructured research data into actionable knowledge using retrieval-augmented generation (RAG) systems and vector databases. Adept at integrating telemetry and observability for continuous performance monitoring of AI models and services. Developed cross-functional features in collaboration with product managers, researchers, and engineers to deliver trustworthy reasoning platforms. Strong understanding of large-scale microservices, transparent reasoning processes, and human-LLM hybrid systems. Passionate about enabling organizations to generate faster, traceable, and data-informed decisions.

Education

Master of Science in Computer Science and Engineering

Dec 2024

University of North Texas, Denton, Texas

Bachelor of Technology, Computer Science and Engineering

Oct 2020

Aditya Educational Institute, India

Skills

Languages: Python, Java, TypeScript, JavaScript, SQL

AI/LLM: LangChain, OpenAI, Hugging Face, FastAPI, RAG Pipelines, Transformers

Frameworks: Spring Boot, Spring MVC, Spring Security, Hibernate, React.js, Angular.js

Databases: PostgreSQL, MySQL, MongoDB, Cassandra, Redis, Elasticsearch, Cosmos DB

Cloud Platforms: Azure (App Services, Cosmos DB), AWS (Lambda, EC2, CDK), Docker, Kubernetes

Observability: Prometheus, ELK Stack, Splunk, Azure Monitor, Power BI, Tableau

DevOps & CI/CD: GitHub Actions, Jenkins, Terraform, Helm, Maven, Gradle

Tools: Jira, Confluence, Visual Studio Code, IntelliJ IDEA, NetBeans

Work Experience

Intuit, USA | Software Engineer

Jun 2024 - Present

- Developed AI-driven SPAs using React.js and Redux, enabling research teams to interact with intelligent agents, visualizing insights derived from unstructured data sources and machine-generated summaries.
- Designed modular microservices using Spring Boot and deployed them to Azure App Services, increasing system reliability while supporting transparent research workflows and knowledge inference pipelines.
- Built and deployed LangChain-powered LLM applications integrated with OpenAI and Azure OpenAI APIs, enabling automated research reasoning with dynamic prompt chaining and semantic context enrichment.
- Enjoys building intelligent, responsive web apps that connect traditional tools like Excel with AI-driven financial systems.
- Integrated Prometheus-based telemetry for AI performance tracking, enabling fine-grained observability into model usage, latency, and output reliability to guide model iteration and optimization decisions.
- Deployed generative AI models for text, image, and code generation, automating internal research reporting and increasing content creation efficiency by replacing manual summarization tasks.
- professional front-end development experience using JavaScript, TypeScript, and React.js to build interactive, AI-driven applications.
- Created advanced Power BI dashboards for visualizing real-time telemetry and reasoning performance metrics, enabling stakeholders to monitor the system's impact on data-driven decision-making processes.

Publicis Sapient, Bangalore, India | Associate Software Engineer

Jan 2021 – Dec 2022

- Built Angular.js-based front-end applications integrated with backend microservices via RESTful APIs and AJAX, enabling research analysts to interact with structured data interfaces seamlessly.
- This role requires expertise in building interactive dashboards, integrating RESTful APIs with front-end applications, and implementing responsive, user-centric design principles.
- Developed robust Spring Boot and Hibernate-based services to support end-to-end knowledge capture pipelines, improving system modularity and back-end performance by more than 50%.
- Created machine learning pipelines using Scikit-learn for preprocessing, feature scaling, and encoding, accelerating model experimentation cycles for downstream analytics and reporting use cases.
- Managed AWS infrastructure using EC2, S3, Lambda, and VPC to deploy microservices at scale, ensuring high system availability and performance across global research delivery environments.
- Designed and maintained automated CI/CD pipelines with Jenkins and GitHub Actions, streamlining deployments, reducing human errors, and promoting code quality through integrated testing workflows.
- Built interactive dashboards with Tableau, integrating relational databases like MySQL and PostgreSQL, supporting executive decision-making with visualizations of KPIs and critical research insights.
- Participated in Agile ceremonies, collaborated with PMs and QA teams, and contributed to user story grooming, driving feature clarity and cross-functional alignment during rapid development cycles.

Certifications

- AWS Certified Developer – Associate Certification
- AZURE FUNDAMENTALS- AZ (900)
- ADOBE PROFESSIONAL DEVELOPER – ADOBE
